FOUNDATION COFFEE

VBM JUNIOR PACKAGE

Analogic Espresso Machine with Mini Mazzer Grinder

This machine is designed for coffee connoisseurs who want to enjoy the perfect cup in the comfort of their own home. From the entry level to the top end, all the machines in this line of VBM have an E61 group head, so you can enjoy coffee at home just as you would in your favourite bar.

The mid-range Domobar machine is ideal if you want the right balance between coffee dispensing and milk frothing.

Features

The single-stage boiler system allows you to dispense coffee, steam and water separately and in total safely, thanks to dedicated switches.
The red float indicates that the tray is full. Empty it and simple wash it in the dishwasher.
Fill the tank directly from the machine or remove it and take it to the sink. For longevity we recommend using Filtered Water.

Highlights
