The E-LOK 10-Series

Ease of control inside & outside

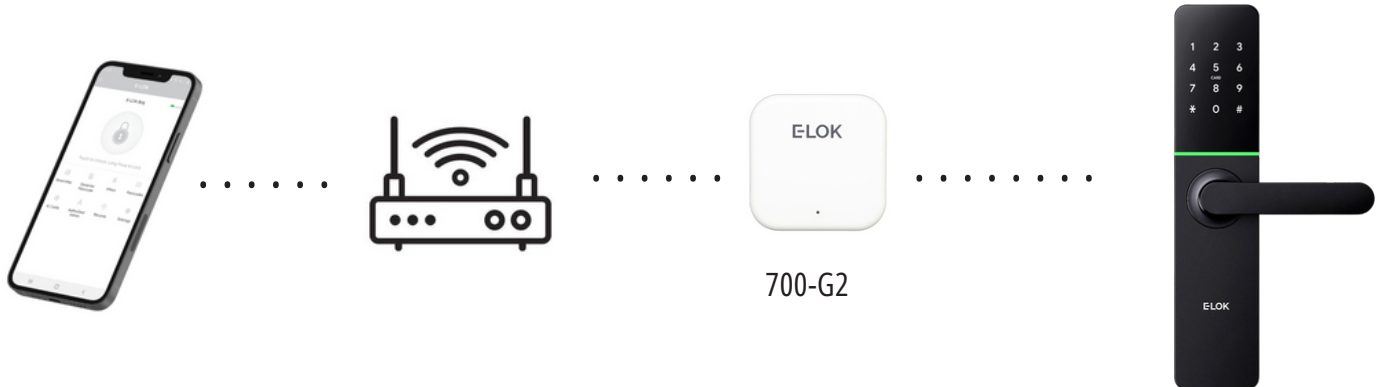

The E-LOK 10-Series comes with a convenient new feature: a lock and unlock button located on the interior panel of the lock. This button allows for easy control over the lock's state from the inside. This feature can be used in conjunction with the Auto lock and Passage mode features.

The interior button lights up green when unlocked and red when locked which along with the LED strip on the exterior panel provides a visual indication to the lock's state.

The 10-Series is powered by the same E-LOK app which has proven itself to be the most user friendly and intuitive interface on the market.
