

Non-woven web wheels

MFW600 High performance non-woven web wheels for steel, stainless steel and NF metals

The high performance non-woven web wheel **MFW 600** has been optimised for work on:

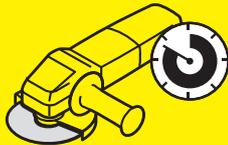

- ▶ Steel,
- ▶ Stainless steel
- ▶ NF metals

Consistent performance and proven safety

Available in four different grit sizes, the wheel covers the entire range of applications from refining this surface to finishing. The silicon carbide abrasive grain is bonded to the polyamide non-woven fibre web with synthetic resin.

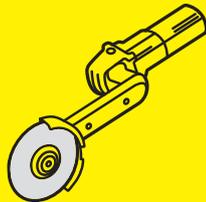

Available in 125 x 6 x 22mm:

- 342218 - Coarse (Red) 9000 max. RPM
- 342219 - Medium (Grey) 9000 max. RPM
- 342237 - Fine (Grey) 9000 max. RPM

Also available in 150 x 6 x 25.4mm:

- 337944 - Coarse (Red) 7500 max. RPM
- 337945 - Medium (Grey) 7500 max. RPM
- 337946 - Fine (Grey) 5000 max. RPM

Applications of the MFW 600

This high performance non-woven web wheel produces the best work results when used in the medium speed range, i.e. at 5000 - 7500 RPM. Especially when used for processing stainless steel, e.g. in tank or container construction, this tool excels at both grinding and removing minor imperfections on the surface. It is also a popular option for creating a matt or satin finish.

Very good grinding results

Since Klingspor uses only synthetically made abrasive grain, customers can expect consistent quality. The abrasive grain Klingspor chose for the high performance non-woven web wheel MFW 600 is silicon carbide (SiC). While exceedingly hard, silicon carbide is also characterised by moderate toughness. Silicon carbide crystals are sharp-edged and brittle.

The open structure of the abrasive disc keeps the discs from becoming clogged with dust. Its superior flexibility allows the disc to perfectly contour to the profile of the workpiece. The result is exceptional abrasive performance with an excellent surface finish.
