

SPX Johnson Pump Automatic Bilge Pump Switch

Description

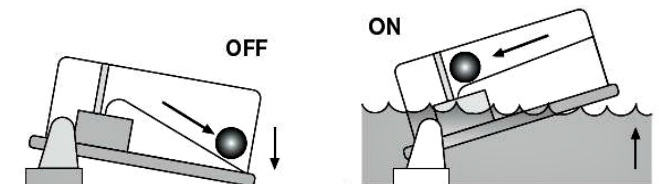

The SPX Johnson Pump AS888 bilge pump float switch protects bilge pumps and ensures fully automatic operation. The float housing is hinged on the mounting base. A steel ball rolls towards the hinged end of the switch when the float is raised by rising bilge water, where the ball forms the contact between two electrical terminals to complete the bilge pump circuit.

The switch can be screwed down or hooked directly onto the T-slot on most SPX Johnson Pump bilge pumps. The switch should always be mounted parallel to the keel with the float facing aft.

Features

- L 115mm x W75mm x H95mm
- Current rating 15A @ 12v or 7,5A @ 24V

Aquavolt Part No	701100
Johnson Pump Part No	34-888
