

Hydraulic Knowhow

# Hydraulic Machinery Made Easy

# Hydraulic Machinery Made Easy

- Always got too much stock of the wrong parts?
- Challenged by quality control in hydraulic components?
- Tired of many different suppliers?

We have a simple three step process to help you

## 1. REVIEW

- Who you are
- What products you build
- How you build them

## 2. IDENTIFY

- What works well
- What doesn't work well
- What are the three most important things you need from a supplier

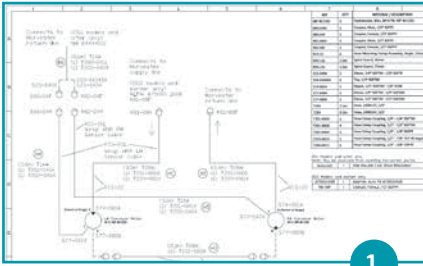

## 3. SOLVE

- How hydraulic components can be simplified
- Where kits for hydraulics can assist
- How to get all components in one simple kit

### Ask yourself does my current supplier

- |   |  |
|---|--|
| <input type="checkbox"/> Design my system?                                | <input type="checkbox"/> Help me customize my design and optimise performance? |
| <input type="checkbox"/> Supply premade hoses with part numbers?          | <input type="checkbox"/> Understand how my equipment works?                    |
| <input type="checkbox"/> Offer to prepaint my components?                 | <input type="checkbox"/> Supply on time?                                       |
| <input type="checkbox"/> Provide fitting assembly service for components? | <input type="checkbox"/> Supply all the components I need?                     |
| <input type="checkbox"/> Supply kits with only what I need?               | <input type="checkbox"/> Give me the best value for money possible?            |

# THE PROCESS

1. Kits are custom designed from original cad drawings which can be altered with the correct part numbers.

2. Costings, estimations and optimizations calculations made.

3. Consultations are made with the customers, to decide on the final outcomes required.

4. Kits are packaged according to how machines are made, some weld on components may be supplied in separate bags to facilitate optimum manufacturing.

5. Hose kits can be separated from hardware kits or supplied as hose only kits.

6. Kits are boxed and made ready for shipping and labeled with the correct part numbers.
