

ALL WINTER GREEN BLEND

- For oversowing warm season grass in winter months.
- For where shade impacts the growth of warm season grasses.
- Suitable for Warm Season Instant Turf oversowing

All Winter Green Blend is specifically designed to produce a lush, green lawn in the winter months in cooler states of Australia.

When temperatures drop, warm season grass goes dormant and appears discoloured. When All Winter Green Lawn Blend is oversown it provides all year round green.

A blend of dark green, cool season grasses, All Winter Green Blend is capable of withstanding limited sunlight in cooler conditions and is well suited to shady lawns, or under large trees where it can be difficult to grow warm season grasses.

Seed Mixture By Count:

- 36% Creeping Red Fescue
- 23% Hard Fescue
- 21% Turf Type Perennial Ryegrass
- 20% Kentucky Bluegrass

Application:

- Sowing rate: 4-5kg/100m²

How to oversow your warm season lawn:

- 1 Remove any undesirable grass types or weeds.
- 2 Cut/mow the warm season grass at around 10-20mm, to open the surface.
- 3 Carefully measure your area, (length x width) to ensure you have the correct amount of seed for your project. Insufficient seed will result in a sparse lawn.
- 4 Apply Kickstart Starter Fertiliser to ensure young seedling has the correct nutrients to establish well.
- 5 It is important to sow seed evenly. An Earthway hand-held or push spreader can assist with even coverage.
- 6 Once seed is established increase mower height over winter months to a minimum height of 60mm.
- 7 To remain healthy and strong your lawn will require adequate amounts of fertiliser and watering.
- 8 In late spring lower mower height to encourage warm season grass to establish.
