

COOL COVER ANNUAL RYEGRASS

TURF TYPE ANNUAL RYEGRASS

PACK SIZE: 1KG, 5KG, 10KG

100% Turf-Type Annual Ryegrass

This turf type ryegrass establishes quickly, providing a more attractive and higher quality lawn than pasture annual ryegrass. It's a cost effective alternative to permanent ryegrass and works well as a nurse grass. Expect good wear tolerance, consistent colour and density, and natural spring transition. Cool Cover Annual Ryegrass is a great option for budget conscious turf managers and is adapted to both cool and warm season regions for temporary turf.

Features:

- Medium-dark green color and smooth texture
- Easier spring transition for Bermudagrass and can lower management costs
- Fast germination and quick full coverage
- Germinates in cooler soil temperatures
- Wear tolerant

Areas of Use:

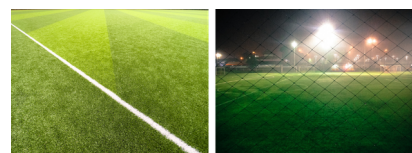

- Golf course turf, sports turf, home lawn
- Use as temporary cover to improve turf quality and stabilise soil

Application Rates:

New Sowing: 4-5kg per 100m²

Overseeding Dormant Warm Season Grasses: 3-4kg per 100m²

Ten Steps to a Great Lawn:

1. Remove any undesirable grass types or weeds.
2. Lightly till soil if necessary.
3. Add a quality soil such as sandy loam where required to a depth of 100-150mm. Remember your lawn will only perform as well as the soil it is grown in.
4. Level area in preparation for seeding, allowing sufficient fall for water run off.
5. Carefully measure your area, (length x width) to ensure you have the correct amount of seed for your project. Remember insufficient seed could result in a sparse lawn.
6. Apply a suitable turf starter fertiliser (NPK) to ensure your young seedling has sufficient nutrient to establish.
7. Carefully select your lawn seed taking into account your desired objectives. Sow seed at the recommended label rates. Better results are NOT gained by using excessive amounts.
8. Lightly rake and or roll the area to ensure your seed is in contact with the soil. Be sure not to bury your seed, 3-5mm depth is sufficient.
9. When your lawn requires mowing remember to remove only 1/3 of the leaf at any one time and follow suggested mowing heights.
10. To remain healthy and strong your lawn will require adequate amounts of fertiliser and watering. We strongly advise to oversow your lawn 1-2 times per year to maintain a dense lawn.
