

EVERGREEN TURF COVERS

NEW COLOUR & SIZES
NOW AVAILABLE

Evergreen Turf Covers have been developed as an essential management tool for Turf Managers worldwide.

It will protect established turf areas and accelerate turf growth for new constructions. It can be used repeatedly and will last for many years.

What it's made of:

The permeable material is a uniquely woven, translucent polyethylene with a patented lace coating. UV treated, rot and mildew resistant, it will not show any significant wear or degradation by sunlight even after years of regular use.

Trial and evaluation:

Andrew Peart from AGCSATech recently trialed the Evergreen Turf Cover at Croydon Golf Club, Victoria, here is what he had to say:

"The Evergreen Turf Cover can significantly improve establishment rates and plant vigour of bentgrass on newly sown greens, as well as promote higher levels of moisture retention in the rootzone."

- Evergreen is permeable allowing air, water and light penetration which make it ideal for new seeding and oversowing. This greenhouse effect will warm the soil, resulting in earlier root growth.
- Accelerates turf growth providing rapid germination.
- Evergreen protects seed from high winds, heavy rainfall, birds and other animals
- It's environmentally friendly, utilising less water and chemicals.
- Evergreen can be cut or trimmed without fraying or damage.
- Lightweight one piece construction. It will not smother or flatten the turf surface.
- Easy to handle, install and remove.
- Designed exclusively for the turf industry.
