

Nobex Octo

folding square

- the true square
for professional pockets

NOBEX[®] Octo Folding Square – – the only square you ever need

Nobex Octo is developed in close co-operation with tradesmen, joiners and woodworkers. Our aim was to find a square that would suit every user. It ended with a foldable square with eight preset positions, easy to open and close and perfect for carpenters belts and any pocket.

Every one of the eight preset positions, 0° (folded), 22,5°, 45°, 67,5°, 90°, 112,5°, 135°, 157,5°, is guaranteed to a maximum tolerance of only +/-0,05°. The accuracy will last even if you drop your Octo many times from ladders or scaffolding.

You will never find a try square with that accuracy and certainly none that will stay accurate after years of rough treatment.

The 45 mm wide blade is made from a stainless ground spring steel, and the double-sided scale is deeply etched into the metal.

The handle is an extruded, gold anodised, aluminum profile with an extremely durable surface. The mechanism, which is hidden in the handle, is tested to in excess of 50.000 complete folding cycles without losing the unique close tolerance.

Nobex Octo is available in three sizes.

Size	Inner scale	Outer scale
Octo 200	160 mm	200 mm
Octo 300	260 mm	300 mm
Octo 400	360 mm	400 mm
