10.	N/A	SELECT Button (PWR Consumption Status)	

I-3. LED Status

Function	Color	Status	Description
PWR	Green	On	Power on
		Off	Power off
SYS ALM (GS-5424PLC V3)	RED	On	System failure
		Off	Device in good condition
SYS (GS-5424PLC V3, GS-5210PL)	Green	On	Power on
		Blinking	System is booting up
		Off	Power off
PoE Alert	RED	On	Total PoE power consumed is

			exceeding PoE power budget
		Off	Total PoE power consumed is under PoE power budget
Link/Act	Green	On	Link at 1000Mbps
		Blinking	Sending or receiving data
		Off	Port disconnected or link fail
	Amber	On	Link at 10/100Mbps
		Blinking	Sending or receiving data
		Off	Port disconnected or link fail
PoE	Green	On	Feeding power to PoE devices
		Off	PoE function is not active

7-Segment LED Power Consumption Status (GS-5216PLC & GS-5210PL ONLY)

Note: The LED indicator shows you the status of “Total PoE Power Budget” or “PoE Power Budget Left” when 3 LED indicators are lighted on

- 3 LED indicators: PoE Power Budget left.
- 4 LED indicators: First 2 LED indicators are the PORT number; last 2 LED indicators are the port’s PoE power consumption.

II. Installation

Read the following topics and perform the procedures in the correct order. Incorrect installation may cause damage to the product.

II-1. Physically Setup

There are two ways to physically set up the switch. No matter how you installed the switch, please keep it with good ventilation.

1. Desktop Placement:

Attach the supplied rubber feet to the recessed areas on the bottom of the switch. Place the switch on a flat surface and keep it with good ventilation.

2. Rack-Mount

Installation: You can mount the switch in any standard size, 19-inch (about 48 cm) wide rack with 1 Rack Unit (1U) of space, which is 1.75 inches (4.45 cm) high. First, to align the mounting brackets with the mounting holes on the switch's side panels and secure the brackets with

the screws. Then secure the switch on the equipment rack.

II-2. Connection

- 1. Power on:** Connect the power cord to the switch and the power outlet. The switch is powered by the 100-240VAC 50/60Hz external high-performance power supply. (Note: Make sure the PWR LED is green.)
- 2. Uplink:** Plug the standard Cat5e or above Ethernet cable into the LAN port (Note: Make sure that the LED is green or amber) or plug the SFP/SFP+ cable into the SFP/SFP+ slot (Note: Make sure that the LED is blue (SFP+) or green (SFP)) and connect it to another switch.
- 3. Connect devices:** Plug the standard Cat5e or above Ethernet cable into the LAN port and connect to any networking device with an Ethernet port. (Note: Make sure that the "LAN" Link/Act LED is green or amber.) The hardware installation is complete!
- 4. Connect a computer:** Connect your computer with the switch and get ready for web-based configuration with following "Section III Web-based Configuration Utility" .

III. Web-based Configuration Utility

This section describes how to navigate the web-based switch configuration utility through web browser. **Be sure to disable any browser pop-up blocker.**

Browser Restrictions

- If you are using older versions of Internet Explorer, you cannot directly use an IPv6 address to access the device. You can, however, use the DNS (Domain Name System) server to create a domain name that contains the IPv6 address, and then use that domain name in the address bar in place of the IPv6 address.
- If you have multiple IPv6 interfaces on your management station, use the IPv6 global address instead of the IPv6 link local address to access the device from your browser.

Launching the Configuration Utility

1. Connect your computer with the switch then open a web browser.
2. Enter the IP address of the switch you are configuring in the address bar on the browser (factory default IP address is 192.168.2.1) and then press Enter. Please make sure that your computer's IP address is in the same subnet as this switch. The default IP address is an IP address in the range of 192.168.2.X (X=2-254). You can modify the IP address of your computer if you need.

Default IP	192.168.2.1
Default User Name	admin
Default Password	1234

3. The default username is “admin” and the default password is “1234”.

The image shows a login interface for EDIMAX Pro. At the top is the EDIMAX Pro logo. Below it, the model name 'GS-5424PLC V3' is displayed. The login form includes a username field with a user icon, a password field with a lock icon, and a language dropdown menu set to 'English'. A 'LOGIN' button is at the bottom.

Model Name GS-5424PLC V3

Username:

Password:

Language English ▾

LOGIN

4. The first time that you log in with the default username and password, you are required to set a new password.

The image shows a 'Set New Password' screen. It has two input fields: 'New Password' and 'Confirm Password'. An 'Apply' button is at the bottom.

Set New Password

New Password

Confirm Password

Apply

5. Following the next section for details of Web-based Configuration Utility.

IV. Web-based Switch Configuration

The Surveillance VLAN PoE+ Web Smart switches provide rich functionalities. This chapter describes how to use the web-based management interface (Web UI) to configure the switch's features.

For the purposes of this manual of GS-5424PLC V3/GS-5216PLC/GS-5210PL, the user interface is separated into five sections, as shown in the following figure:

Status >> System Information

III-1. Status

Use the Status pages to view system information and status.

III-1-1. System Information

This page shows switch panel, CPU utilization, Memory utilization and other system current information. It also allows user to edit some system information.

To display the Device Information web page, click **Status > System Information**.

III-1-3. Port

III-1-3-1. Statistics

This page displays standard counters on network traffic from the Interfaces, Ethernet-like and RMONMIB. Interfaces and Ethernet-like counters display errors on the traffic passing through each port. RMON counters provide a total count of different frame types and sizes passing through each port. The “Clear” button will clear MIB counter of current selected port.

To display the Port Flow Chart web page, click **Status > Port > Statistics**.

LAG 3		---	---		
LAG 4		---	---		
LAG 5		---	---		
LAG 6		---	---		
LAG 7		---	---		
LAG 8		---	---		

Figure 18 - Status > Link Aggregation

Item	Description
LAG	LAG Name.
Name	LAG port description.
Type	The type of the LAG. ● Static: The group of ports assigned to a static LAG are always active members. ● LACP: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.
Link Status	LAG port link status.
Active Member	Active member ports of the LAG.
Inactive Member	Inactive member ports of the LAG.

III-1-5. MAC Address Table

The MAC address table page displays all MAC address entries on the switch including static MAC address created by administrator or auto learned from hardware. The “Clear” button will clear all dynamic entries and “Refresh” button will retrieve latest MAC address entries and show them on page.

To display the MAC Address Table web page, click **Status > MAC Address Table**.

VLAN	MAC Address	Type	Port
1	74:DA:38:17:6E:7A	Management	CPU
1	B8:6B:23:6D:C1:14	Dynamic	GE28

Figure 19 - Status > MAC Address Table

Item	Description
VLAN	VLAN ID of the mac address.
MAC Address	MAC address.
Type	The type of MAC address ● Management: DUT’s base mac address for management Purpose. ● Static: Manually configured by administrator ● Dynamic: Auto learned by hardware.
Port	The type of Port ● CPU: DUT’s CPU port for management purpose. ● Other: Normal switch port.

III-2. Network

Use the Network pages to configure settings for the switch network interface and how the switch connects to a remote server to get services.

III-2-1. IP Address

This section allows you to edit the IP address, Netmask, Gateway and DNS server of the switch.

To view the IP Address menu, navigate to **Network > IP Address**.

IPv4 Address	
Address Type	☒ Static ☐ Dynamic
IP Address	192.168.2.1
Subnet Mask	255.255.255.0

Figure 20 - Network > IP Address

Item	Description
Address Type	The address type of switch IP configuration including ● Static: Static IP configured by users will be used. ● Dynamic: Enable the DHCP to obtain the IP address from a DHCP server.
IP Address	Specify the switch static IP address on the static configuration.
Subnet Mask	Specify the switch subnet mask on the static configuration.
Default Gateway	Specify the default gateway on the static configuration. The default gateway must be in the same subnet with switch IP address configuration.
DNS Server 1	Specify the primary user-defined IPv4 DNS server configuration.
DNS Server 2	Specify the secondary user-defined IPv4 DNS server configuration.
Table 3-2: IPv6 Address fields	
IPv4 Address	The operational IPv4 address of the switch.
IPv4 Gateway	The operational IPv4 gateway of the switch.
IPv6 Address v6	The operational IPv6 address of the switch.
IPv6 Gateway	The operational IPv6 gateway of the switch.
Link Local Address	The IPv6 link local address for the switch.

III-2-2. System Time

This page allow user to set time source, static time, time zone and daylight saving settings. Time zone and daylight saving takes effect both static time or time from SNTP server.

To display System Time page, click **Network > System Time**.

Item	Description
Port list	Display the interface of port entry.
Status	Enable/Disable
Ping PD IP Address	Input IP address of the PD
Internal Time	The default setting about Interval (30 seconds) will make switch detect the PD status by performing ping requests every 30 seconds.
Retry Count	If there is no ping reply from the PD, retry count starts to count from 1. Once retry count is reached to 2 times, the switch will perform the action in which you defined.
Action	The Action including none, PD reboot, Reboot & Alarm and Alarm
Reboot Time	Set the switch reboot time

III-5. VLAN

A virtual local area network, virtual LAN or VLAN, is a group of hosts with a common set of requirements that communicate as if they were attached to the same broadcast domain, regardless of their physical location. A VLAN has the same attributes as a physical local area network (LAN), but it allows for end stations to be grouped together even if they are not located on the same network switch. VLAN membership can be configured through software instead of physically relocating devices or connections.

III-5-1. VLAN

Use the VLAN pages to configure settings of VLAN.

III-5-1-1. Create VLAN

This page allows user to add or delete VLAN ID entries and browser all VLAN entries that add statically or dynamic learned by GVRP. Each VLAN entry has a unique name, user can edit VLAN name in edit page.

To display Create VLAN page, click **VLAN > VLAN > Create VLAN**.

Name	Input VLAN name.

III-5-1-2. VLAN Configuration

This page allow user to configure the membership for each port of selected VLAN.

To display VLAN Configuration page, click **VLAN > VLAN > VLAN Configuration**.

VLAN Configuration Table

VLAN

default

<

Figure 43 - VLAN > VLAN > VLAN Configuration

Item	Description
VLAN	Select specified VLAN ID to configure VLAN configuration.
Port	Display the interface of port entry.
Mode	Display the interface VLAN mode of port.
Membership	Select the membership for this port of the specified VLAN ID. ● Forbidden: Specify the port is forbidden in the VLAN. ● Excluded: Specify the port is excluded in the VLAN. ● Tagged: Specify the port is tagged member in the VLAN. ● Untagged: Specify the port is untagged member in the VLAN.
PVID	Display if it is PVID of interface.

III-5-1-3. Membership

This page allow user to view membership information for each port and edit membership for specified interface.

To display Membership page, click **VLAN > VLAN > Membership**.

Membership Table

The screenshot shows a web interface for the 'Membership Table'. At the top right, there is a search icon and a search input field. Below this is a table with the following columns: Entry, Port, Mode, Administrative VLAN, and Operational VLAN. The table contains 22 rows of data, each representing a port configuration. The 'Entry' column ranges from 1 to 22. The 'Port' column lists interfaces from GE1 to GE22. The 'Mode' column shows 'Trunk' for most ports and 'Hybrid' for GE6 and GE8. The 'Administrative VLAN' and 'Operational VLAN' columns show the configured and active VLANs for each port.

Entry	Port	Mode	Administrative VLAN	Operational VLAN
1	GE1	Trunk	1UP	1UP
2	GE2	Trunk	1UP	1UP
3	GE3	Trunk	1UP	1UP
4	GE4	Trunk	1UP	1UP
5	GE5	Trunk	1UP	1UP
6	GE6	Hybrid	1U, 3UP	1U, 3UP
7	GE7	Trunk	1UP	1UP
8	GE8	Hybrid	1UP	1UP
9	GE9	Trunk	1UP	1UP
10	GE10	Trunk	1UP	1UP
11	GE11	Trunk	1UP	1UP
12	GE12	Trunk	1UP	1UP
13	GE13	Trunk	1UP	1UP
14	GE14	Trunk	1UP	1UP
15	GE15	Trunk	1UP	1UP
16	GE16	Trunk	1UP	1UP
17	GE17	Trunk	1UP	1UP
18	GE18	Trunk	1UP	1UP
19	GE19	Trunk	1UP	1UP
20	GE20	Trunk	1UP	1UP
21	GE21	Trunk	1UP	1UP
22	GE22	Trunk	1UP	1UP

Figure 44 - VLAN > VLAN > Membership

Item	Description
Port	Display the interface of port entry.
Mode	Display the interface VLAN mode of port.
Administrative VLAN	Display the administrative VLAN list of this port.
Operational VLAN	Display the operational VLAN list of this port. Operational VLAN means the VLAN status that really runs in device. It may different to administrative VLAN.

Click "**Edit**" button to view the Edit Port Setting menu

Figure 45 - VLAN > VLAN > Membership > Edit Port Setting

Item	Description
Port	Display the interface.
Mode	Display the VLAN mode of interface.
Membership	Select VLANs of left box and select one of following membership then move to right box to add membership. Select VLANs of right box then move to left box to remove membership. Tagging membership may not choose in differ VLAN port mode. Select the time source. ● Forbidden: Set VLAN as forbidden VLAN. ● Excluded: This option is always disabled. ● Tagged: Set VLAN as tagged VLAN. ● Untagged: Set VLAN as untagged VLAN. ● PVID: Check this checkbox to select the VLAN ID to be the port-based VLAN ID for this port. PVID may auto select or can't select in differ settings.

III-5-1-4. Port Setting

This page allow user to configure ports VLAN settings such as VLAN port mode, PVID etc...The attributes depend on different VLAN port mode.

To display Port Setting page, click **VLAN > VLAN > Port Setting**.

Port Setting Table

Item	Description
MAC Address	Specify unicast MAC address in the packets to be dropped.
VLAN	Specify the VLAN to show or clear MAC entries.

III-7. Spanning Tree

The Spanning Tree Protocol (STP) is a network protocol that ensures a loop-free topology for any bridged Ethernet local area network.

III-7-1. Property

To display the Property web page, click **Spanning Tree > Property**.

State	☐ Enable	
Operation Mode	☐ STP ☒ RSTP ☐ MSTP	
Path Cost	☒ Long ☐ Short	
BPDU Handling	☐ Filtering ☒ Flooding	
Priority	32768	(0 - 61440, default 32768)
Hello Time	2	Sec (1 - 10, default 2)
Max Age	20	Sec (6 - 40, default 20)
Forward Delay	15	Sec (4 - 30, default 15)
Tx Hold Count	6	(1 - 10, default 6)
Region Name	74:DA:38:17:6E:7A	
Revision	0	(0 - 65535, default 0)
Max Hop	20	(1 - 40, default 20)
Operational Status		
Bridge Identifier	32768-74:DA:38:17:6E:7A	
Designated Root Bridge	0-00:00:00:00:00:00	
Root Port	N/A	
Root Path Cost	0	
Topology Change Count	0	
Last Topology Change	0D/0H/0M/0S	
Apply		

Figure 59 - Spanning Tree > Property

Item	Description
State	Enable/disable the STP on the switch.
Operation Mode	Specify the STP operation mode. ● STP: Enable the Spanning Tree (STP) operation. ● RSTP: Enable the Rapid Spanning Tree (RSTP) operation. ● MSTP: Enable the Multiple Spanning Tree (MSTP) operation.
Path Cost	Specify the path cost method. ● Long: Specifies that the default port path costs are within the range: 1-200,000,000. ● Short: Specifies that the default port path costs are within the range: 1-65,535.
BPDU Handling	Specify the BPDU forward method when the STP is disabled. ● Filtering: Filter the BPDU when STP is disabled. ● Flooding: Flood the BPDU when STP is disabled.
Priority	Specify the bridge priority. The valid range is from 0 to 61440, and the value should be the multiple of 4096. It ensures the probability that the switch is selected as the root bridge, and the lower value has the higher priority for the switch to be selected as the root bridge of the topology.
Hello Time	Specify the STP hello time in second to broadcast its hello message to other bridges by Designated Ports. Its valid range is from 1 to 10 seconds.
Max Age	Specify the time interval in seconds for a switch to wait the configuration messages, without attempting to redefine its own configuration.
Forward Delay	Specify the STP forward delay time, which is the amount of time that a port remains in the Listening and Learning states before it enters the Forwarding state. Its valid range is from 4 to 10 seconds.
TX Hold Count	Specify the tx-hold-count used to limit the maximum numbers of packets transmission per second. The valid range is from 1 to 10.
Region Name	The MSTP instance name. Its maximum length is 32 characters. The default value is the MAC address of the switch.
Revision	The MSTP revision number. Its valid range is from 0 to 65535.
Max Hop	Specify the number of hops in an MSTP region before the BPDU is discarded. The valid range is 1 to 40.
Operational Status	
Bridge Identifier	Bridge identifier of the switch.
Designated Root Identifier	Bridge identifier of the designated root bridge.
Root Port	Operational root port of the switch.
Root Path Cost	Operational root path cost.
Topology Change Count	Numbers of the topology changes.
Last Topology Change	The last time for the topology change.

III-7-2. Port Setting

To configure and display the STP port settings, click **STP > Port Setting**.

Figure 61 - Spanning Tree > Port Setting > Edit Port Setting

Item	Description
Port	Selected port ID.
State	Enable/Disable the STP on the specified port.
Path Cost	Specify the STP path cost on the specified port.
Priority	Specify the STP path cost on the specified port.
Edge Port	Specify the edge mode. ● Enable: Force to true state (as link to a host). ● Disable: Force to false state (as link to a bridge). In the edge mode, the interface would be put into the Forwarding state immediately upon link up. If the edge mode is enabled for the interface and there are BPDUs received on the interface, the loop might be occurred in the short time before the STP state change.
BPDU Filter	The BPDU Filter configuration avoids receiving / transmitting BPDU from the specified ports. ● Enable: Enable BPDU filter function.

	● Disable: Disable BPDU filter function.
BPDU Guard	The BPDU Guard configuration to drop the received BPDU directly. ● Enable: Enable BPDU guard function. ● Disable: Disable BPDU guard function.
Point-to-Point	Specify the Point-to-Point port configuration: ● Auto: The state is depended on the duplex setting of the port ● Enable: Force to true state. ● Disable: Force to false state

III-7-3. MST Instance

To configure MST instance setting, click **STP > MST Instance**.

Figure 63 - Spanning Tree > MST Instance > Edit MST Instance Setting

Item	Description
VLAN	Select the VLAN list for the specified MSTI.
Priority	Specify the bridge priority on the specified MSTI. The valid range is from 0 to 61440, and the value must be the multiple of 4096. It ensures the probability that the switch is selected as the root bridge, and the lower values has the higher priority for the switch to be selected as the root bridge of the STP topology.

Figure 64 - Spanning Tree > MST Port Setting

Item	Description
MSTI	Specify the port setting on the specified MSTI.
Port	Specify the interface ID or the list of interface IDs.
Path Cost	The port path cost on the specified MSTI.
Priority	The port priority on the specified MSTI.
Port Role	The current port role on the specified port. The possible values are: “Disabled”, “Master”, “Root”, “Designated”, “Alternative”, and “Backup”.
Port State	The current port state on the specified port. The possible values are: “Disabled”, “Discarding”, “Learning”, and “Forwarding”.
Mode	The operational STP mode on the specified port.
Type	The possible value for the port type are: ● Boundary: The port attaching an MST Bridge to a LAN that is not in the same region. ● Internal: The port attaching an MST Bridge to a LAN that is not in the same region.
Designated Bridge	The bridge ID of the designated bridge.
Designated Port ID	The designated port ID on the switch.
Designated Cost	The path cost of the designated port on the switch.
Remaining Hop	The remaining hops count on the specified port.

Click "**Edit**" button to view Edit MST Port Setting menu.

III-8. Discovery

Use this section to configure LLDP.

III-8-1. LLDP

LLDP is a one-way protocol; there are no request/response sequences. Information is advertised by stations implementing the transmit function, and is received and processed by stations implementing the receive function. The LLDP category contains LLDP and LLDP-MED pages.

III-8-1-1. Property

To display LLDP Property Setting web page, click **Discovery > LLDP > Property**.

LLDP

State ☒ Enable

LLDP Handling

☐ Filtering

☐ Bridging

☒ Flooding

TLV Advertise Interval 30 Sec (5 - 32767, default 30)

Hold Multiplier 4 (2 - 10, default 4)

Reinitializing Delay 2 Sec (1 - 10, default 2)

Transmit Delay 2 Sec (1 - 8191, default 2)

LLDP-MED

Fast Start Repeat Count 3 (1 - 10, default 3)

Apply

Figure 68 - Discovery > LLDP > Property

Item	Description
State	Enable/ Disable LLDP protocol on this switch.
LLDP Handling	Select LLDP PDU handling action to be filtered, bridging or flooded when LLDP is globally disabled. ● Filtering: Deletes the packet. ● Bridging: (VLAN-aware flooding) Forwards the packet to all VLAN members. ● Flooding: Forwards the packet to all ports
TLV Advertise Interval	Select the interval at which frames are transmitted. The default is 30 seconds, and the valid range is 5–32767 seconds.
Holdtime Multiplier	Select the multiplier on the transmit interval to assign to TTL (range 2–10, default = 4).
Reinitialization Delay	Select the delay before a re-initialization (range 1–10 seconds, default = 2).
Transmit Delay	Select the delay after an LLDP frame is sent (range 1–8191 seconds, default = 3).
Fast Start Repeat Count	Select fast start repeat count when port link up (range 1–10, default = 3).

III-8-1-2. Port Setting

To display LLDP Port Setting, click **Discovery > LLDP > Port Setting**.

Figure 76 LLDP Neighbor Detail Page

III-8-1-6. Statistics

The Link Layer Discovery Protocol (LLDP) Statistics page displays summary and per-port information for LLDP frames transmitted and received on the switch.

To display LLDP Statistics status, click **Discovery > LLDP > Statistics**.

Global Statistics

Figure 77 - Discovery > LLDP > Statistics

Item	Description
Insertions	The number of times the complete set of information advertised by a particular MAC Service Access Point (MSAP) has been inserted into tables associated with the remote systems.
Deletions	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems.
Drops	The number of times the complete set of information advertised by MSAP could not be entered into tables associated with the remote systems because of insufficient resources.
Age Outs	The number of times the complete set of information advertised by

	MSAP has been deleted from tables associated with the remote systems because the information timeliness interval has expired.
Statistics Table	
Port	Interface or port number.
Transmit Frame Total	Number of LLDP frames transmitted on the corresponding port.
Receive Frame Total	Number of LLDP frames received by this LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive Frame Discard	Number of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive Frame Error	Number of invalid LLDP frames received by the LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive TLV Discard	Number of TLVs of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive TLV Unrecognized	Number of TLVs of LLDP frames that are unrecognized while the LLDP agent is enabled.
Neighbor Timeout	Number of age out LLDP frames.

III-9. Multicast

Use this section to configure Multicast.

III-9-1. General

Use the General pages to configure settings of IGMP and MLD common function.

III-9-1-1. Property

To display multicast general property Setting web page, click **Multicast> General> Property**.

The screenshot shows a configuration interface for Multicast settings. It is divided into two main sections: 'Unknown Multicast Action' and 'Multicast Forward Method'.

Unknown Multicast Action: This section contains three radio button options: 'Flood' (selected), 'Drop', and 'Forward to Router Port'.

Multicast Forward Method: This section is divided into two sub-sections for 'IPv4' and 'IPv6'. Each sub-section contains two radio button options: 'DMAC-VID' (selected) and 'DIP-VID'.

At the bottom left, there is an 'Apply' button.

Figure 78 - Multicast > General > Property

Item	Description
Unknown Multicast Action	Set the unknown multicast action ● Flood: flood the unknown multicast data. ● Drop: drop the unknown multicast data. ● Router port: forward the unknown multicast data to router port.
IPv4	Set the ipv4 multicast forward method. ● MAC-VID: forward method dmac+vid. ● DIP-VID: forward method dip+vid.
IPv6	Set the ipv6 multicast forward method. ● MAC-VID: forward method dmac+vid. ● DIP-VID: forward method dip+vid(dip is ipv6 low 32 bit).

III-9-1-2. Group Address

This page allow user to browse all multicast groups that dynamic learned or statically added.

To display Multicast General Group web page, click **Multicast> General > Group Address**.

The screenshot shows the 'Group Address Table' web page. It includes a search bar at the top right and a table with the following columns: 'VLAN', 'Group Address', 'Member', 'Type', and 'Life (Sec)'. The table is currently empty, and a message '0 results found.' is displayed below the table header. At the bottom, there are buttons for 'Add', 'Edit', 'Delete', and 'Refresh', along with pagination controls: 'First', 'Previous', '1', 'Next', and 'Last'.

Figure 79 - Multicast > General > Group Address

Item	Description
IP Version	IP Version ● IPv4: ipv4 multicast group ● IPv6: ipv6 multicast group
VLAN	The VLAN ID of group.
Group Address	The group IP address.
Member	The member ports of group.
Type	The type of group. Static or Dynamic.
Life(Sec)	The life time of this dynamic group.

Click **“Add”** or **“Edit”** button to view Add or Edit Group Address menu.

☐	1	Disabled	Enabled	2	125	10	2	1	Disabled

Edit

Figure 83 - Multicast > IGMP Snooping > Property

Item	Description
State	Set the enabling status of IGMP Snooping functionality Enable: If Checked Enable IGMP Snooping, else is Disabled IGMP Snooping.
Version	Set the igmp snooping version ● IGMPv2: Only support process igmp v2 packet. ● IGMPv3: Support v3 basic and v2.
Report Suppression	Set the enabling status of IGMP v2 report suppression Enable: If Checked Enable IGMP Snooping v2 report suppression, else Disable the report suppression function.
VLAN	The IGMP entry VLAN ID.
Operation Status	The enable status of IGMP snooping VLAN functionality.
Router Port Auto Learn	The enabling status of IGMP snooping router port auto learning.
Query Robustness	The Query Robustness allows tuning for the expected packet loss on a subnet.
Query Interval	The interval of querier to send general query.
Query Max Response Interval	In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member Query count	The count that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Immediate leave	The immediate leave status of the group will immediate leave when receive IGMP Leave message.

Click "**Edit**" button to Edit VLAN Setting menu.

Figure 84 - Multicast > IGMP Snooping > Property >Edit VLAN Setting

Item	Description
VLAN	The selected VLAN List.
State	Set the enabling status of IGMP Snooping VLAN functionality Enable: If Checked Enable IGMP Snooping VLAN, else is Disabled IGMP Snooping VLAN.
Router Port Auto Learn	Set the enabling status of IGMP Snooping router port learning Enable: If checked Enable learning router port by query and PIM, DVRMP, else Disable the learning router port.
Immediate leave	Immediate Leave the group when receive IGMP Leave message. Enable: If checked Enable immediate leave, else disable immediate leave.
Query Robustness	The Admin Query Robustness allows tuning for the expected packet loss on a subnet.
Query Interval	The Admin interval of querier to send general query.

Query Max Response Interval	The Admin query max response interval , In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member Query Counter	The Admin last member query count that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The Admin last member query interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Operational Status	
Status	Operational IGMP snooping status , must both IGMP snooping global and IGMP snooping enable the status will be enable.
Query Robustness	Operational Query Robustness.
Query Interval	Operational Query Interval.
Query Max Response Interval	Operational Query Max Response Interval
Last Member Query Counter	Operational Last Member Query Count.
Last Member Query Interval	Operational Last Member Query Interval.

III-9-2-2. Querier

This page allow user to configure querier settings on specific VLAN of IGMP Snooping.

To display IGMP Snooping Querier Setting web page, click **Multicast > IGMP Snooping > Querier**.

Querier Table

☐	VLAN	State	Operational Status	Version	Querier Address
☐	1	Disabled	Disabled		

Edit

Figure 85 - Multicast > IGMP Snooping > Querier

Item	Description
VLAN	IGMP Snooping querier entry VLAN ID.
State	The IGMP Snooping querier Admin State.
Operational Status	The IGMP Snooping querier operational status.
Querier Version	The IGMP Snooping querier operational version.
Querier IP	The operational Querier IP address on the VLAN.

Click "**Edit**" button to view Edit Querier menu.

Figure 86 - Multicast > IGMP Snooping > Querier > Edit Querier

Item	Description
VLAN	The Selected Edit IGMP Snooping querier VLAN List.
State	Set the enabling status of IGMP Querier Election on the chose VLANs Enabled: if checked Enable IGMP Querier else Disable IGMP Querier.
Version	Set the query version of IGMP Querier Election on the chose VLANs ● IGMPv2: Querier version 2. ● IGMPv3: Querier version 3. (IGMP Snooping version should be IGMPv3)

III-9-2-3. Statistics

This page allow user to clear igmp snooping statics.

To display IGMP Snooping Statistics, click **Multicast > IGMP Snooping > Statistics**.

Receive Packet

Source-specific Group Query	IGMP Special Source and Group General Query packet.

III-9-3. MVR

Use the MVR pages to configure settings of MVR function.

III-9-3-1. Property

To display multicast MVR property Setting web page, click **Multicast > MVR > Property**.

The screenshot shows the 'Multicast > MVR > Property' configuration page. The page is divided into several sections by dashed lines. The first section is 'State' with an 'Enable' checkbox. The second section is 'VLAN' with a dropdown menu showing '1'. The third section is 'Mode' with two radio buttons: 'Compatible' (selected) and 'Dynamic'. The fourth section is 'Group Start' with a text input field showing '0.0.0.0'. The fifth section is 'Group Count' with a text input field showing '1' and a range '(1 - 128)'. The sixth section is 'Query Time' with a text input field showing '1' and a unit 'Sec (1 - 10)'. Below these is a section titled 'Operational Group' with a black header bar, containing 'Maximum' (128) and 'Current' (0). At the bottom is an 'Apply' button.

Figure 88 - Multicast > MVR > Property

Item	Description
State	Enable: if checked enable the MVR state, else disable the MVR state.
VLAN	The MVR VLAN ID.
Mode	Set the MVR mode ● Compatible: compatible mode. ● Dynamic: learn group member on source port.
Group Start	MVR group range start.
Group Count	MVR group continue count.
Query Time	MVR query time when receive MVR leave MVR group packet.
Maximum	The max number of MVR group database.
Current	The learned MVR group current time

III-9-3-2. Port Setting

This page allow user to configure port role and port immediate leave.

To display MVR port role and immediate leave state setting web page, click **Multicast > MVR > Port Setting**.

Figure 94 - Security > RADIUS > Add/Edit RADIUS Server

Item	Description
Address Type	In add dialog, user need to specify server Address Type ● Hostname: Use domain name as server address. ● IPv4: Use IPv4 as server address. ● IPv6: Use IPv6 as server address.
Server Address	In add dialog, user need to input server address based on address type. In edit dialog, it shows current edit server address.
Server Port	Set RADIUS server port.
Priority	Set RADIUS server priority (smaller value has higher priority). RADIUS session will try to establish with the server setting which has highest priority. If failed, it will try to connect to the server with next higher priority.
Retry	Set RADIUS server retry value. If it is fail to connect to server, it will keep trying until timeout with retry times.
Timeout	Set RADIUS server timeout value. If it is fail to connect to server, it will keep trying until timeout.
Usage	Set RADIUS server usage type ● Login: For login authentification. ● 802.1x: For 802.1x authentication. ● All: For all types.

III-10-2. Management Access

Use the Management Access pages to configure settings of management access.

III-10-2-1. Management VLAN

The image shows a configuration interface for the Management VLAN. It features a light yellow background with a dashed blue border. On the left, there is a blue box with the text "Management VLAN" in white. To the right of this box is a dropdown menu currently showing "1 - default". Below the dropdown, a note in black text reads: "Note: Change Management VLAN may cause connection interrupted". At the bottom left of the interface is a blue button with the text "Apply".

Note: Change Management VLAN may cause connection interrupted

III-10-2-2. Management Service

This page allow user to change management services related configurations.

To display Management Service click **Security > Management Access > Management Service**.

Management Service		
Telnet	☐	Enable
SSH	☐	Enable
HTTP	☒	Enable
HTTPS	☐	Enable
SNMP	☒	Enable

Session Timeout		
Console	10	Min (0 - 65535, default 10)
Telnet	10	Min (0 - 65535, default 10)
SSH	10	Min (0 - 65535, default 10)
HTTP	10	Min (0 - 65535, default 10)
HTTPS	10	Min (0 - 65535, default 10)

Password Retry Count		
Console	3	(0 - 120, default 3)
Telnet	3	(0 - 120, default 3)
SSH	3	(0 - 120, default 3)

Silent Time		
Console	0	Sec (0 - 65535, default 0)
Telnet	0	Sec (0 - 65535, default 0)
SSH	0	Sec (0 - 65535, default 0)

Figure 95 - Security > Management Access > Management Service

Item	Description
Management Service	Management service admin state. ● Telnet: Connect CLI through telnet. ● SSH: Connect CLI through SSH. ● HTTP: Connect WEBUI through HTTP. ● HTTPS: Connect WEBUI through HTTPS. ● SNMP: Manage switch trough SNMP.
Session Timeout	Set session timeout minutes for user access to user interface. 0 minutes

	means never timeout.
Password Retry Count	Retry count is the number which CLI password input error tolerance count. After input error password exceeds this count, the CLI will freeze after silent time.
Silent Time	After input error password exceeds password retry count, the CLI will freeze after silent time.

III-10-2-3. Management ACL

This page allow user to add or delete management ACL rule. A rule cannot be deleted if under active.

To display Management ACL page, click **Security > Management Access > Management ACL**.

The screenshot shows the 'Management ACL' configuration interface. At the top, there is a text input field labeled 'ACL Name' and an 'Apply' button. Below this is a section titled 'Management ACL Table'. This section contains a search bar, a status indicator 'Showing 0 to 0 of 0 entries', and a table. The table has three columns: 'ACL Name', 'State', and 'Rule'. Below the table, it says '0 results found.' and there are pagination buttons: 'First', 'Previous', '1' (selected), 'Next', and 'Last'. At the bottom of the table section, there are three buttons: 'Active', 'Deactive', and 'Delete'.

Figure 96 - Security > Management Access > Management ACL

Item	Description
ACL Name	Input MAC ACL name.
Management ACL	
ACL Name	Display Management ACL name.
State	Display Management ACL whether active.
Rule	Display the number Management ACE rule of ACL.

III-10-2-4. Management ACE

This page allow user to add, edit or delete ACE rule. An ACE rule cannot be edited or deleted if ACL under active. New ACE cannot be added if ACL under active

To display Management ACE page, click **Security > Management Access > Management ACE**.

Figure 101 - Security > Authentication Manager > Port Setting

Item	Description
Port	Port
Port Control	Support following authentication port control types. ● Disable: Disable authentication function and all clients have network accessibility. ● Force Authorized: Port is force authorized and all clients have network accessibility. ● Force Unauthorized: Port is force unauthorized and all clients have no network accessibility. ● Auto: Need passing authentication procedure to get network accessibility.
Reauthentication	Reautheticate state ● Enabled: Host will be reauthenticated after reauthentication period. ● Disabled: Host will not be reauthenticated after reauthentication period.
Max Hosts	In Multiple Authentication mode, total host number cannot not exceed max hosts number.
Common Timer (Reauthentication)	After re-authenticate period, host will return to initial state and need to pass authentication procedure again.

Common Timer (Inactive)	If no packet from the authenticated host, the inactive timer will increase. After inactive timeout, the host will be unauthorized and corresponding session will be deleted. In multi-host mode, the packet is counting on the authorized host only.
Common Timer (Quiet)	When port is in Locked state after authenticating fail several times, the host will be locked in quiet period. After this quiet period, the host is allowed to authenticate again.
802.1X Params (TX Period)	Number of seconds that the device waits for a response to an Extensible Authentication Protocol (EAP) request/identity frame from the supplicant (client) before resending the request.
802.1X Params (Supplicant Timeout)	The maximum number of EAP requests that can be sent. If a response is not received after the defined period (supplicant timeout), the authentication process is restarted.
802.1X Params (Server Timeout)	Number of seconds that lapses before EAP requests are resent to the supplicant.
802.1X Params (Max Request)	Number of seconds that lapses before the device resends a request to the authentication server.
Web-Based Param (Max Login)	Allow user login fail number. After login fail number exceed, the host will enter Lock state and is not able to authenticate until quiet period exceed.

Figure 109 - Security > Storm Control > Edit Port Setting

Item	Description
Port	Select the setting ports.
State	Select the state of setting Enable: Enable the storm control function.
Broadcast	Enable: Enable the storm control function of Broadcast packet. Value of storm control rate, Unit: pps (packet per-second, range 1- 262143) or Kbps (Kbits per-second, range16 - 1000000) depends on global mode setting.
Unknown Multicast	Enable: Enable the storm control function of Unknown multicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1- 262143) or Kbps (Kbits per-second, range16 - 1000000) depends on global mode setting.
Unknown Unicast	Enable: Enable the storm control function of Unknown unicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1 - 262143) or Kbps (Kbits per-second, range16 - 1000000) depends on global mode setting.
Action	Select the state of setting - Drop: Packets exceed storm control rate will be dropped. - Shutdown: Port will be shutdown when packets exceed storm control rate.

III-10-7. DoS

A Denial of Service (DoS) attack is a hacker attempt to make a device unavailable to its users. DoS attacks saturate the device with external communication requests, so that it cannot respond to legitimate traffic. These attacks usually lead to a device CPU overload.

The DoS protection feature is a set of predefined rules that protect the network from malicious attacks. The DoS Security Suite Settings enables activating the security suite.

III-10-7-1. Property

To display Dos Global Setting web page, click **Security > Dos > Property**.

Apply

Figure 110 - Security > DoS > Property

Item	Description
POD	Avoids ping of death attack.
Land	Drops the packets if the source IP address is equal to the destination IP address.
UDP Blat	Drops the packets if the UDP source port equals to the UDP destination port.
TCP Blat	Drops the packages if the TCP source port is equal to the TCP destination port.

DMAC = SMAC	Drops the packets if the destination MAC address is equal to the source MAC address.
Null Scan Attack	Drops the packets with NULL scan.
X-Mas Scan Attack	Drops the packets if the sequence number is zero, and the FIN, URG and PSH bits are set.
TCP SYN-FIN Attack	Drops the packets with SYN and FIN bits set.
TCP SYN-RST Attack	Drops the packets with SYN and RST bits set
ICMP Fragment	Drops the fragmented ICMP packets.
TCP SYN (SPORT<1024)	Drops SYN packets with sport less than 1024.
TCP Fragment (Offset = 1)	Drops the TCP fragment packets with offset equals to one.
Ping Max Size	Specify the maximum size of the ICMPv4/ICMPv6 ping packets. The valid range is from 0 to 65535 bytes, and the default value is 512 bytes.
IPv6 Min Fragment	Checks the minimum size of IPv6 fragments, and drops the packets smaller than the minimum size. The valid range is from 0 to 65535 bytes, and default value is 1240 bytes.
Smurf Attack	Avoids smurf attack. The length range of the netmask is from 0 to 323 bytes, and default length is 0 bytes.

Figure 122 - Security > IP Source Guard > Add/Edit IP-MAC-Port-VLAN Binding

Item	Description
Port	Select port from list of a binding entry.
VLAN	Specify a VLAN ID of a binding entry.
Binding	Select matching mode of binding entry IP-MAC-Port-VLAN: packet must match IP address 、 MAC address 、 Port and VLAN ID. IP-Port-VLAN: packet must match IP address or subnet 、 Port and VLAN ID.
MAC Address	Input MAC address. Only available on IP-MAC-Port-VLAN mode.
IP Address	Input IP address and mask. Mask only available on IP-MAC-Port mode.

III-10-9-3. Save Database

This page allow user to configure DHCP snooping database which can backup and restore dynamic DHCP snooping entries.

To display Save Database page, click **Security > DHCP Snooping > Save Database**.

Figure 123 - Security > IP Source Guard > Save Database

Item	Description
Type	Select the type of database agent. ● None: Disable database agent service. ● Flash: Save DHCP dynamic binding entries to flash. ● TFTP: Save DHCP dynamic binding entries to remote TFTP server.
Filename	Input filename for backup file. Only available when selecting type

	“flash” and “TFTP”.
Address Type	Select the type of TFTP server. ● Hostname: TFTP server address is hostname. ● IPv4: TFTP server address is IPv4 address
Server Address	Input remote TFTP server hostname or IP address. Only available when selecting type “TFTP”
Write Delay	Input delay timer for doing backup after change happened. Default is 300 seconds.
Timeout	Input aborts timeout for doing backup failure. Default is 300 seconds.

III-11. ACL

Use the ACL pages to configure settings for the switch ACL features..

III-11-1. MAC ACL

This page allow user to add or delete ACL rule. A rule cannot be deleted if under binding.

To display MAC ACL page, click **ACL > MAC ACL**.

Figure 124 - ACL > MAC ACL

Item	Description
ACL Name	Input MAC ACL name.
ACL Name	Display MAC ACL name.
Rule	Display the number ACE rule of ACL.
Port	Display the port list that bind this ACL.

III-11-2. MAC ACE

This page allow user to add, edit or delete ACE rule. An ACE rule cannot be edited or deleted if ACL under binding. New ACE cannot be added if ACL under binding.

To display MAC ACE page, click **ACL > MAC ACE**.

Figure 129 - ACL > Add/Edit ACE

Item	Description
ACL Name	Display the ACL name to which an ACE is being added.
Sequence	Specify the sequence of the ACE. ACEs with higher sequence are processed first (1 is the highest sequence). Only available on Add dialog.
Action	Select the action for a match. ● Permit: Forward packets that meet the ACE criteria. ● Deny: Drop packets that meet the ACE criteria. ● Shutdown: Drop packets that meet the ACE criteria, and disable the port from where the packets were received. Such ports can be reactivated from the Port Settings page.
Protocol	Select the type of protocol for a match. ● Any (IP): All IP protocols are acceptable. ● Select from list: Select one of the following protocols from the drop-down list. ICMP/IPinIP/TCP/EGP/IGP/UDP/HMP/RDP/IPV6/IPV6:ROUT/IPV6:F RAG/ RSVP/IPV6:ICMP/OSPF/PIM/L2TP ● Protocol ID to match: Enter the protocol ID.
Source IP	Select the type for source IP address. ● Any: All source addresses are acceptable. ● User Defined: Only a source address or a range of source addresses which users define are acceptable. Enter the source IP address value and mask to which will be matched.
Destination IP	Select the type for destination IP address. ● Any: All destination addresses are acceptable. ● User Defined: Only a destination address or a range of destination addresses which users define are acceptable. Enter the destination IP address value and mask to which will be matched.
Source Port	Select the type of protocol for a match. Only available when protocol is TCP or UDP. ● Any: All source ports are acceptable. ● Single: Enter a single TCP/UDP source port to which packets are matched. ● Range: Select a range of TCP/UDP source ports to which the packet is matched. There are eight different port ranges that can be configured (shared between source and destination ports). TCP and UDP protocols each have eight port ranges.
Destination Port	Select the type of protocol for a match. Only available when protocol is TCP or UDP. ● Any: All source ports are acceptable. ● Single: Enter a single TCP/UDP source port to which packets are matched. ● Range: Select a range of TCP/UDP source ports to which the packet is matched. There are eight different port ranges that can be

	configured (shared between source and destination ports). TCP and UDP protocols each have eight port ranges.
TCP Flags	Select one or more TCP flags with which to filter packets. Filtered packets are either forwarded or dropped. Filtering packets by TCP flags increases packet control, which increases network security. Only available when protocol is TCP.
Type of Service	Select the type of service for a match. - Any: All types of service are acceptable. - DSCP to match: Enter a Differentiated Services Code Point (DSCP) to match. - IP Precedence to match: Enter a IP Precedence to match.
ICMP Type	Either select the message type by name or enter the message type number. Only available when protocol is ICMP. - Any: All message types are acceptable. - Select from list: Select message type by name. - Protocol ID to match: Enter the number of message type.
ICMP Code	Select the type for ICMP code. Only available when protocol is ICMP. - Any: All codes are acceptable. - User Defined: Enter an ICMP code to match.

III-11-5. ACL Binding

This page allow user to bind or unbind ACL rule to or from interface. IPv4 and Ipv6 ACL cannot be bound to the same port simultaneously.

To display ACL Binding page, click **ACL > ACL Binding**.

Figure 130 - ACL > ACL Binding

Item	Description
Port	Display port entry ID.
MAC ACL	Display mac ACL name that bound of interface. Empty means no rule bound.
IPv4 ACL	Display ipv4 ACL name that bound of interface. Empty means no rule bound.
IPv6 ACL	Display ipv6 ACL name that bound of interface. Empty means no rule bound.

Click “**Edit**” button to view the Edit ACL Binding menu.

Figure 132 - QoS > General > Property

Item	Description
State	Set checkbox to enable/disable QoS.
Trust	Select QoS trust mode - CoS: Traffic is mapped to queues based on the CoS field in the VLAN tag, or based on the per-port default CoS value (if there is no VLAN tag on the incoming packet), the actual mapping of the CoS to queue can be configured on port setting dialog. - CoS-DSCP: Uses the trust CoS mode for non-IP traffic and trust DSCP mode for IP traffic. - IP Precedence: Traffic is mapped to queues based on the IP precedence. The actual mapping of the IP precedence to queue can be configured on the IP Precedence mapping page.
Port Setting Table	
Port	Port name
CoS	Port default CoS priority value for the selected ports.
Trust	Port trust state - Enabled: Traffic will follow trust mode in global setting - Disabled: Traffic will always use best efforts

Remarking (CoS)	Set checkbox to enable/disable port CoS remarking. ● Enabled: CoS remarking is enabled ● Disabled: CoS remarking is disabled
Remarking (IP Precedence)	Set checkbox to enable/disable port IP Precedence remarking. ● Enabled: DSCP remarking is enabled ● Disabled: DSCP remarking is disabled

Click **"Edit"** button to view the Edit Port Setting menu.

Figure 133 - Qos > General > Property

Item	Description
Port	Selected port list.
CoS	Set default CoS/802.1p priority value for the selected ports.
Trust	Set checkbox to enable/disable port trust state.
Remarking (CoS)	Set checkbox to enable/disable port CoS remarking.
Remarking (IP Precedence)	Set checkbox to enable/disable port IP Precedence remarking.

III-12-1-2. Queue Scheduling

The switch supports eight queues for each interface. Queue number 8 is the highest priority queue.

Queue number 1 is the lowest priority queue. There are two ways of determining how traffic in queues is handled, Strict Priority (SP) and Weighted Round Robin (WRR).

- Strict Priority (SP)—Egress traffic from the highest priority queue is transmitted first. Traffic from the lower queues is processed only after the highest queue has been

transmitted, which provide the highest level of priority of traffic to the highest numbered queue.

- **Weighted Round Robin (WRR)**—In WRR mode the number of packets sent from the queue is proportional to the weight of the queue (the higher the weight, the more frames are sent).

The queuing modes can be selected on the Queue page. When the queuing mode is by Strict Priority, the priority sets the order in which queues are serviced, starting with queue_8 (the highest priority queue) and going to the next lower queue when each queue is completed.

When the queuing mode is Weighted Round Robin, queues are serviced until their quota has been used up and then another queue is serviced. It is also possible to assign some of the lower queues to WRR, while keeping some of the higher queues in Strict Priority. In this case traffic for the SP queues is always sent before traffic from the WRR queues. After the SP queues have been emptied, traffic from the WRR queues is forwarded. (The relative portion from each WRR queue depends on its weight).

To display Queue Scheduling web page, click **QoS > General > Queue Scheduling**

Queue	Method			WRR Bandwidth (%)

Figure 134 - QoS > General > Queue Scheduling

Item	Description
Queue	Queue ID to configure.
Strict Priority	Set queue to strict priority type.
WRR	Set queue to Weight round robin type.
Weight	If the queue type is WRR, set the queue weight for the queue.
WRR Bandwidth	Percentage of WRR queue bandwidth.

III-12-1-3. CoS Mapping

The CoS to Queue table determines the egress queues of the incoming packets based on the 802.1p priority in their VLAN tags. For incoming untagged packets, the 802.1p priority will be the default CoS/802.1p priority assigned to the ingress ports. Use the Queues to CoS table to remark the CoS/802.1p priority for egress traffic from each queue.

To display CoS Mapping web page, click **QoS > General > CoS Mapping**.

The screenshot displays the 'CoS Mapping' web page. It features two main sections, each with a table and an 'Apply' button.

III-12-2. Rate Limit

Use the Rate Limit pages to define values that determine how much traffic the switch can receive and send on specific port or queue.

III-12-2-1. Ingress/Egress Port

This page allow user to configure ingress port rate limit and egress port rate limit. The ingress rate limit is the number of bits per second that can be received from the ingress interface. Excess bandwidth above this limit is discarded.

To display Ingress / Egress Port web page, click **QoS > Rate Limit > Ingress / Egress Port**.

	Entry	Port	Ingress		Egress

Device Name	Display neighbor device name.
Port ID	Display neighbor port ID that connected.
Message Interval	Display neighbor message interval.
Timeout Interval	Display neighbor timeout interval.

III-14. Management

Use the Management pages to configure settings for the switch management features.

III-14-1. User Account

The default username/password is admin/admin. And default account is not able to be deleted.

Use this page to add additional users that are permitted to manage the switch or to change the passwords of existing users.

To display User Account web page, click **Management > User Account**.

III-14-2. Firewall

III-14-2-1. Upgrade / Backup

This page allow user to upgrade or backup firmware image through HTTP or TFTP server.

To display firmware upgrade or backup web page, click **Management > Firmware > Upgrade/Backup**.

The screenshot shows a web interface for firmware operations. It is divided into three main sections by dashed lines. The first section, labeled 'Action', contains two radio buttons: 'Upgrade' (which is selected) and 'Backup'. The second section, labeled 'Method', contains two radio buttons: 'TFTP' and 'HTTP' (which is selected). The third section, labeled 'Filename', contains a 'Choose File' button and a text box that currently displays 'No file chosen'. Below these sections is an 'Apply' button.

Figure 153 - Management > Firewall > Upgrade/Backup

Item	Description
Action	Firmware operations ● Upgrade: Upgrade firmware from remote host to DUT. ● Backup: Backup firmware image from DUT to remote host.
Method	Firmware upgrade / backup method. ● TFTP: Using TFTP to upgrade/backup firmware. ● HTTP: Using WEB browser to upgrade/backup firmware.
Filename	Use browser to upgrade firmware, you should select firmware image file on your host PC.

To display firmware upgrade or backup web page, click **Management > Firmware > Upgrade/Backup**.

III-14-3. Configuration

III-14-3-1. Upgrade / Backup

This page allow user to upgrade or backup configuration file through HTTP or TFTP server.

To display firmware upgrade or backup web page, click **Management > Configuration > Upgrade/Backup**.

The screenshot shows a web interface for configuration upgrade/backup. It features a yellow background with a blue border. The interface is divided into four sections by dashed blue lines:

- Action:** Radio buttons for 'Upgrade' (selected) and 'Backup'.
- Method:** Radio buttons for 'TFTP' and 'HTTP' (selected).
- Configuration:** Radio buttons for 'Running Configuration' (selected), 'Startup Configuration', 'Backup Configuration', 'RAM Log', and 'Flash Log'.
- Filename:** A 'Choose File' button and a 'No file chosen' text.

An 'Apply' button is located at the bottom left of the form.

Figure 158 - Management > Configuration > Upgrade/Backup

Item	Description
Action	Configuration operations ● Upgrade: Upgrade firmware from remote host to DUT ● Backup: Backup firmware image from DUT to remote host
Method	Configuration upgrade / backup method ● TFTP: Using TFTP to upgrade/backup firmware ● HTTP: Using WEB browser to upgrade/backup firmware
Configuration	Configuration types ● Running Configuration: Merge to current running configuration file ● Startup Configuration: Replace startup configuration file ● Backup Configuration: Replace backup configuration file
Filename	Use browser to upgrade configuration, you should select configuration file on your host PC.

To display firmware upgrade or backup web page, click **Management > Configuration > Upgrade/Backup**.

The screenshot shows a web interface for configuration management. It features a series of radio button options grouped into sections: 'Action' (Upgrade, Backup), 'Method' (TFTP, HTTP), 'Configuration' (Running Configuration, Startup Configuration, Backup Configuration, RAM Log, Flash Log), and 'Address Type' (Hostname, IPv4, IPv6). Below these are two text input fields for 'Server Address' and 'Filename'. An 'Apply' button is located at the bottom left of the form.

Figure 159 - Management > Configuration > Upgrade/Backup

Item	Description
Action	Configuration operations ● Upgrade: Upgrade firmware from remote host to DUT ● Backup: Backup firmware image from DUT to remote host
Method	Configuration upgrade / backup method ● TFTP: Using TFTP to upgrade/backup firmware ● HTTP: Using WEB browser to upgrade/backup firmware
Configuration	Configuration types ● Running Configuration: Merge to current running configuration file ● Startup Configuration: Replace startup configuration file ● Backup Configuration: Replace backup configuration file
Address Type	Specify TFTP server address type ● Hostname: Use domain name as server address ● IPv4: Use IPv4 as server address ● IPv6: Use IPv6 as server address
Server Address	Specify TFTP server address address
Filename	File name saved on remote TFTP server

To display firmware upgrade or backup web page, click **Management > Configuration > Upgrade/Backup**.

The screenshot shows a web interface for configuration management. It is divided into three main sections: Action, Method, and Configuration. Each section contains a list of radio button options. The 'Action' section has 'Upgrade' and 'Backup' (selected). The 'Method' section has 'TFTP' and 'HTTP' (selected). The 'Configuration' section has 'Running Configuration' (selected), 'Startup Configuration', 'Backup Configuration', 'RAM Log', and 'Flash Log'. An 'Apply' button is located at the bottom left of the form.

Figure 160 - Management > Configuration > Upgrade/Backup

Item	Description
Action	Configuration operations ● Upgrade: Upgrade firmware from remote host to DUT ● Backup: Backup firmware image from DUT to remote host
Method	Configuration upgrade / backup method ● TFTP: Using TFTP to upgrade/backup firmware ● HTTP: Using WEB browser to upgrade/backup firmware
Configuration	Configuration types ● Running Configuration: Backup running configuration file. ● Startup Configuration: Backup start configuration file. ● Backup Configuration: Backup backup configuration file. ● RAM Log: Backup log file stored in RAM. ● Flash Log: Backup log files store in Flash.

To display firmware upgrade or backup web page, click **Management > Configuration > Upgrade/Backup**

The screenshot shows a web interface for configuring firmware upgrade or backup. It is divided into several sections, each with a set of radio button options:

- Action:** Upgrade (selected), Backup
- Method:** TFTP (selected), HTTP
- Configuration:** Running Configuration (selected), Startup Configuration, Backup Configuration, RAM Log, Flash Log
- Address Type:** Hostname (selected), IPv4, IPv6
- Server Address:** A text input field.
- Filename:** A text input field.

An **Apply** button is located at the bottom left of the form.

Figure 161- Management > Configuration > Upgrade/Backup

Item	Description
Action	Configuration operations ● Upgrade: Upgrade firmware from remote host to DUT ● Backup: Backup firmware image from DUT to remote host
Method	Configuration upgrade / backup method ● TFTP: Using TFTP to upgrade/backup firmware ● HTTP: Using WEB browser to upgrade/backup firmware
Configuration	Configuration types ● Running Configuration: Backup running configuration file. ● Startup Configuration: Backup start configuration file. ● Backup Configuration: Backup backup configuration file. ● RAM Log: Backup log file stored in RAM. ● Flash Log: Backup log files store in Flash.
Address Type	Specify TFTP server address type ● Hostname: Use domain name as server address ● IPv4: Use IPv4 as server address ● IPv6: Use IPv6 as server address
Server Address	Specify TFTP server address address.
Filename	File name saved on remote TFTP server.

III-14-3-2. Save Configuration

This page allow user to manage configuration file saved on DUT and click “**Restore Factory Default**” button to restore factory defaults.

To display the Save Configuration web page, click **Management > Configuration > Save Configuration**.

The screenshot shows a web interface for saving configuration. It has two main sections: 'Source File' and 'Destination File'. The 'Source File' section has three radio buttons: 'Running Configuration' (selected), 'Startup Configuration', and 'Backup Configuration'. The 'Destination File' section has two radio buttons: 'Startup Configuration' (selected) and 'Backup Configuration'. At the bottom, there are two buttons: 'Apply' and 'Restore Factory Default'.

Figure 162 - Management > Configuration > Save Configuration

Item	Description
Source File	Source file types ● Running Configuration: Copy running configuration file to destination. ● Startup Configuration: Copy startup configuration file to destination. ● Backup Configuration: Copy backup configuration file to destination
Destination File	Destination file ● Startup Configuration: Save file as startup configuration. ● Backup Configuration: Save file as backup configuration.

III-14-4. SNMP

III-14-4-1. View

To configure and display the SNMP view table, click **Management > SNMP > View**.

View Table

V. Surveillance Mode

The simple and intuitive GUI of Surveillance Mode provides real-time device and network information

IV-1. Home Page

The figure below shows the user interface.

IV-1-1. Overview

This page displays information and configuration options for the switch.
It contains a diagram of the switch, including an overview of the devices connected to the switch.

There is a device count at the bottom of the page, listing the number of connected IP-Cameras, NVRs and other (unrecognized devices).

NOTE: System scans IP camera every 30s.

You can remote control the PoE port by clicking the power button  on the switch

Item	Description
	The total number of IP-Cameras connected to the switch.
	The total number of NVRs connected to the switch.
	The number of unknown devices connected to the switch.

Item	Description
	PoE is enabled on the port.
	PoE is disabled on the port.

IV-1-2. Port Info

In this page you can check the status of PoE port, loopback detection and the range of the distance.

PoE+ Smart Surveillance Switch

2 4 6 8 10 12 14 16 18 20 22 24

1 3 5 7 9 11 13 15 17 19 21 23 25 26 27 28

Loopback Detection: OFF

Distance: < 0.5m

151

Item	Description
PoE port	Shows the PoE port is connected with IP camera, NVR or others
loopback detection	Loopback Detection (LBD) provides protection against loops by transmitting loop protocol packets out of ports on which loop protection has been enabled. When the switch sends out a loop protocol packet, and then receives the same packet, it shuts down the port that received the packet.
Distance	It shows the cable length (in meters)

IV-1-3. IP Camera Info

The IP-Camera Information section provides information on each camera connected to the switch.

Item	Description
	The PoE consumption of the switch. This is listed as one negative integer and one positive integer. The negative integer is the power being consumed by the PoE devices connected to the switch. The positive integer is the total PoE budget for the ports currently using PoE, based on the type of PoE in use.
	The total number of ONVIF IP-Cameras connected to the switch.

IV-1-4. NVR Info

The NVR Information section provides information on each NVR connected to the switch.

Item	Description
	The total number of NVRs connected to the switch.

IV-1-5. PoE Info

The PoE Information section provides information on the PoE usage of each port.

PoE On/Off: On
PoE Status: Delivering
PoE Budget: Up to 30W
Power Consumption: 4W

There is a PoE status at the bottom of the page, listing the PoE status, budget and consumption.

Item	Description
	The total power budget.
	The PoE consumption of the switch. This is listed as one negative integer and one positive integer. The negative integer is the power being consumed by the PoE devices connected to the switch. The positive integer is the total PoE budget for the ports currently using PoE, based on the type of PoE in use.
	The current utilization of PoE total power budget.

IV-1-6. Status

This is the main page on the Surveillance page and is divided into 3 areas, device information section, PoE utilization section and bandwidth usage section.

And the device information section is sub-divided into 3 sections, switch information, web information and system information.

PoE Utilization:

The PoE Utilization area contains PoE utilization statistics for the switch. On the left is the total PoE utilization, with the total power budget and overall utilization shown. On the right is a per-port usage graph, showing the PoE utilization for each individual port.

Total Receive/Transmit Bandwidth:

The bandwidth usage section contains bandwidth utilization for the switch. On the left the total bandwidth shows the total inbound traffic on all ports. There is also a per-port bandwidth utilization graph on the right, showing the inbound traffic for each individual port.

IV-2. PoE Scheduling

PoE Scheduling which allows you to specify the amount of time that power is delivered to a PoE port. This can be used to save power when devices are not in use, or as a security feature to prevent wireless access from being available outside of business hours.

Click "Add" button to view the "Time Range Edit" menu.

Time Range

Scheduling

	Range Name	Days	Start Time	End Time
☐	Edimax	Mon, Tue,	01:00	23:00

Add

Edit

Delete

You can name your PoE schedule and choose date/time from Mon ~ Sun.

IV-3. Time

In this section you can configure the setting of the clock and SNTP Server.

IV-3-1. Clock Settings

The fields that can be configured for the **Clock Settings** are described below:

Clock Setting

Manual Time		
Date	1970-01-05	YYYY-MM-DD
Time	02:51:24	HH:MM:SS
Time Zone	UTC +8:00	
Current Time	1970-01-05 02:51:24 UTC+8	

Apply

Item	Description
Date	Set the date in the format (DD / MM / YYYY).
Time	Set the system time in the format (HH:MM:SS).
Time Zone	Set the time zone for your switch.
Current Time	It shows the current time for the switch.

IV-3-2. SNTP Settings

Simple Network Time Protocol (SNTP) is a lightweight version of the NTP protocol and can be used to keep the system clock in-sync by using a network-based time source.

SNTP Server Settings	
Source	Manual Time
SNTP State	Disabled ▼
Address Type	☒ Hostname ☐ IPv4
Server Address	
Server Port	123 (1 - 65535, default 123)
Daylight Saving Time	
Type	☒ None ☐ Recurring ☐ Non-recurring ☐ USA ☐ Europe
Offset	60 Min (1 - 1440, default 60)
Recurring	From: Day Sun Week First Month Jan Time
	To: Day Sun Week First Month Jan Time
Non-recurring	From: YYYY-MM-DD HH:MM
	To: YYYY-MM-DD HH:MM
Operational Status	
Current Time	1970-01-05 02:57:23 UTC+8

Apply

Item	Description
SNTP State	Enable/Disable
Address Type	Choose Hostname or IPv4
Server Address	Enter the IP address of the SNTP server you would like to synchronize with.
Server Port	Enter the server port (1-65535)
Daylight Saving Time	
Type	Choose the daylight saving type in none, recurring, non-recurring, USA or Europe
Offset	Enter the offset in minute (1-1440)
Operational Status	
Current Time	It shows the current time for the switch.

NOTE:

- **Recurring (always occurs, with no defined stopping point).**
For example, the United States started using recurring daylight savings rules in 2007.
- **Nonrecurring (defined for a specific period of time).**

IV-4. Surveillance Settings

The Surveillance Settings page is used to configure the settings for the Surveillance IP, SNMP host, log server and password.

IP Settings	
Address Type	Static ▾
IP Address	192.168.2.1

Password Settings	
Password	
Confirm Password	

Item	Description
Address Type	The address type of switch IP configuration including, Static: Static IP configured by users will be used. Dynamic: Enable the DHCP to obtain the IP address from a DHCP server.
IP Address	Specify the switch static IP address on the static configuration.
Subnet Mask	Specify the switch subnet mask on the static configuration.
Default Gateway	Specify the default gateway on the static configuration. The default gateway must be in the same subnet with switch IP address configuration.
DNS Server 1	Specify the primary user-defined IPv4 DNS server configuration.
DNS Server 2	Specify the secondary user-defined IPv4 DNS server configuration.
SNMP Host Settings	
Server Address	Enter the IP address of the SNMP Network Management Server which will receive SNMP Traps from this device.
Version	The principal SNMP protocol versions including, SNMPv1: This is the initial version of SNMP. SNMPv2: This version uses a community-based form of security, just like SNMPv1, replacing the Party-based Administrative and Security Framework of SNMPv2. SNMPv3: This is an interoperable standards-based protocol defined in RFC2273, 2274, and 2275. It provides secure access to devices by authenticating and encrypting packets over the network. Due to the security vulnerabilities of other versions of SNMP, it is recommended to use SNMPv3.
Type	SNMP Agent devices translate information into a format that can be interpreted by the SNMP manager. The notifications are to the SNMP manager, and are called Trap notifications or Inform requests. - Trap: The notifications are sent by the SNMP agent device when a specific parameter is reached by the device and the trap messages can be improper user authentication, CPU usage, link status, and other significant events. This helps the administrator address network issues. - Inform: Inform is only available on SNMPv2 and v3.
Security Level	The security level of SNMP including, - No security: Unsecured SNMP requests - Authentication: Confirmation of the sender's identity and of the

	timeliness of the request, with the content of the request visible to the network. - Authentication and privacy: With the content of the request encrypted.
Server Port	Enter the server port (1-65535)
Timeout	Set default timeout value.
Retry	Set default retry number.
Log Server	
Server Address	Enter the server address
Server Port	Enter the server port (1-65535)
Facility	The Facility value is a way of determining which process of the machine created the message.
Minimum Severity	The system log SNMP severity command sets the minimum severity level of log events sent as SNMP traps. Log events of lower severity are not sent.
Password Settings	
Password	Configure the password that will be used to restrict access to the device via the Web UI.
Confirm Password	Confirm the password that will be used to restrict access to the device via the Web UI.

IV-5. Mail Alert

SMTP stands for Simple Mail Transfer Protocol. It handles the sending of emails. The ability to support email services. This allows the user to send outgoing mail and retrieve incoming mail, respectively.

IV-8-3. E-map View

You can view E-Maps of multiple locations.

IV-9. Tools

In this section you can check if you have the latest version on your switch or backup/restore the configuration etc...

IV-9-1. Firmware Information

In this page you can check the firmware version, size or update time.

Version	1.0.3
Size(Byte)	9761472
Update Time	Aug 22 2020 - 14:36:05

IV-9-2. Firmware Upgrade & Backup

Firmware upgrades can be done via either Trivial FileTransfer Protocol (TFTP) or Hypertext Transfer Protocol/with Secure Sockets (HTTP/HTTPS).

Item	Description
TFTP	TFTP is an unsecure file transfer protocol typically used to distribute software upgrades and configuration files. When using the TFTP client, the file will be downloaded from a TFTP server on your network.
HTTP	HTTP is an application protocol that runs on top of the TCP/IP suite of protocols (the foundation protocols for the Internet)

Action	☒ Upgrade ☐ Backup
Method	☐ TFTP ☒ HTTP
Filename	Choose File No file chosen

IV-9-3. Configuration Restore & Backup

You can restore or backup the configuration from HTTP/TFTP in this page.

Action	☒ Upgrade ☐ Backup
Method	☐ TFTP ☒ HTTP
Configuration	☒ Running Configuration ☐ Startup Configuration ☐ Backup Configuration ☐ RAM Log ☐ Flash Log
Filename	Choose File No file chosen

Item	Description
TFTP	TFTP is an unsecure file transfer protocol typically used to distribute software upgrades and configuration files. When using the TFTP client, the file will be downloaded from a TFTP server on your network.
HTTP	HTTP is an application protocol that runs on top of the TCP/IP suite of protocols (the foundation protocols for the Internet)

IV-9-4. Reset

This page allows users to restore the switch to factory default.

Warning :	The Switch will be reset to its factory defaults including IP address.
Restore Factory Default	

IV-9-5. Reboot System

You can reboot the switch via the web UI.

Warning :	Reboot the system and unsaved changes in the configuration will be lost.
Reboot	

VI. *Config Reload Button*

You can easily create Surveillance VLAN by pressing the “Config Button” on System Information page.

Please follow the steps below to load default Surveillance VLAN configurations:

1. Click  and Tab OK to continue.

2. Tab OK to continue.

NOTE: 1.The IP address won't be changed after system restarted.
2. Surveillance VLAN 10 has been created.

3. Enter your new password and confirm password

You can check out the differences after “Config Reload”.

VLAN >> VLAN >> Create VLAN

Please search the **model number** to enter the referred page.

Download

To select your product and find related download materials, enter the model number into the search box on the right side or follow the simple steps below:

*Feel free to contact us anytime if you need help or if you can't find your product.

A screenshot of a web search interface. It features a search bar with the placeholder text 'Model no.' and a magnifying glass icon on the right. Below the search bar, there is a link that reads 'How do I find the model number?'. The entire search bar area is highlighted with a red rectangular border.

VIII. Safety Instructions

The following general safety guidelines are provided to help ensure your own personal safety and protect your product from potential damage. Remember to consult the product user instructions for more details.

- This product is designed for indoor use only.
- Static electricity can be harmful to electronic components. Discharge static electricity from your body (i.e. touching grounded bare metal) before touching the product.
- The device contains no user serviceable parts. Do not attempt to service the product and never disassemble the product.
- Do not spill food or liquid on your product and never push any objects into the openings of your product.
- Do not use this product near water, areas with high humidity, or condensation.
- Keep the product away from radiators and other heat sources.
- This device is not designed to be operated by children.
- Always unplug the product from mains power before cleaning and use a dry lint free cloth only.

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Radiation Exposure Statement

This device complies with FCC radiation exposure limits set forth for an uncontrolled environment and it also complies with Part 15 of the FCC RF Rules. This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. End-users and installers must be provided with antenna installation instructions and consider removing the no-collocation statement.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution!

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

R&TTE Compliance Statement

This equipment complies with all the requirements of DIRECTIVE 2014/30/EU OF THE EUROPEAN PARLIAMENT AND THE COUNCIL of March 9, 1999 on radio equipment and telecommunication terminal equipment and the mutual recognition of their conformity (R&TTE). The R&TTE Directive repeals and replaces in the directive 98/13/EEC (Telecommunications Terminal Equipment and Satellite Earth Station Equipment) As of April 8, 2000.

Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this and of the computer manufacture must therefore be allowed at all times to ensure the safe use of the equipment.

EU Countries Intended for Use

The ETSI version of this device is intended for home and office use in Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Turkey, and United Kingdom. The ETSI version of this device is also authorized for use in EFTA member states: Iceland, Liechtenstein, Norway, and Switzerland.

EU Countries Not Intended for Use

None

EU Declaration of Conformity

- English:** This equipment is in compliance with the essential requirements and other relevant provisions of Directive 2014/30/EU.
- Français:** Cet équipement est conforme aux exigences essentielles et autres dispositions de la directive 2014/30/EU.
- Čeština:** Toto zařízení je v souladu se základními požadavky a ostatními příslušnými ustanoveními směrnic 2014/30/EU.
- Polski:** Urządzenie jest zgodne z ogólnymi wymaganiami oraz szczególnymi warunkami określonymi Dyrektywą UE 2014/30/EU.
- Română:** Acest echipament este în conformitate cu cerințele esențiale și alte prevederi relevante ale Directivei 2014/30/EU.
- Русский:** Это оборудование соответствует основным требованиям и положениям Директивы 2014/30/EU.
- Magyar:** Ez a berendezés megfelel az alapvető követelményeknek és más vonatkozó irányelveknek (2014/30/EU).
- Türkçe:** Bu cihaz 2014/30/EU. direktifleri zorunlu istekler ve diğer hükümlerle ile uyumludur.
- Українська:** Обладнання відповідає вимогам і умовам директиви 2014/30/EU.
- Slovenčina:** Toto zariadenie spĺňa základné požiadavky a ďalšie príslušné ustanovenia smerníc 2014/30/EU.
- Deutsch:** Dieses Gerät erfüllt die Voraussetzungen gemäß den Richtlinien 2014/30/EU.
- Español:** El presente equipo cumple los requisitos esenciales de la Directiva 2014/30/EU.
- Italiano:** Questo apparecchio è conforme ai requisiti essenziali e alle altre disposizioni applicabili della Direttiva 2014/30/EU.
- Nederlands:** Dit apparaat voldoet aan de essentiële eisen en andere van toepassing zijnde bepalingen van richtlijn 2014/30/EU.
- Português:** Este equipamento cumpre os requisitos essenciais da Directiva 2014/30/EU.
- Norsk:** Dette utstyret er i samsvar med de viktigste kravene og andre relevante regler i Direktiv 2014/30/EU.
- Svenska:** Denna utrustning är i överensstämmelse med de väsentliga kraven och övriga relevanta bestämmelser i direktiv 2014/30/EU.
- Dansk:** Dette udstyr er i overensstemmelse med de væsentligste krav og andre relevante forordninger i direktiv 2014/30/EU.
- suomen kieli:** Tämä laite täyttää direktiivien 2014/30/EU. oleelliset vaatimukset ja muut asiaankuuluvat määräykset.

WEEE Directive & Product Disposal

At the end of its serviceable life, this product should not be treated as household or general waste. It should be handed over to the applicable collection point for the recycling of electrical and electronic equipment, or returned to the supplier for disposal.

Declaration of Conformity

We, Edimax Technology Co., Ltd., declare under our sole responsibility, that the equipment described below complies with the requirements of the European R&TTE directives.

Equipment: 12-Port Gigabit PoE Switch, 2 RJ45/2 SFP combo ports
Model No.: GS-5210PL

The following European standards for essential requirements have been followed:

Directives 2014/30/EU

EMC : EN 55032:2015+AC:2016
EN 61000-3-2:2014
EN 61000-3-3:2013+A1:2019
EN 55035:2017

Directives 2014/35/EU

Safety (LVD) : IEC 62368-1:2014 (2nd Edition) and/or EN 62368-1:2014+A11:2017
