

JUTE MESH

Jute Soil Saver Mesh is a 100% biodegradable organic woven jute yarn, constructed into a loose 20 x 20mm open weave mesh used as short term soil erosion protection of batters and open swale drains while natural vegetation is being established. Jute Soil Saver Mesh increases moisture retention in the soil whilst aiding and protecting the germination and establishment of native seeds as well as stabilising topsoil against erosion by wind and flowing water.

Jute Mesh	
<i>Material</i>	100% Biodegradable Jute
<i>Standard Size</i>	1.2M x 550M (660m ²)
<i>Weight</i>	≥ 495gsm
<i>Thickness</i>	5mm +/- 1mm
<i>Roll Weight</i>	327KG
<i>Longevity</i>	6-12 Months
