

ROOT BARRIER

Although trees are a beautiful and integral part of the environment, their root systems can often cause extensive and costly damage to roads, pathways, brick and block work. Root Barrier alleviates the potential damage resulting from the horizontal migration of tree roots.

Enviroguard 1000 is made from 100% recycled polyethylene, including post-consumer products such as HDPE milk bottles. Root Barrier is manufactured with an embossed pattern to assist in early deflection of the fibrous roots and to direct them towards the water table below.

Enviroguard 1000 is an inert, environmentally friendly product that is moisture resistant and will last many times longer than other barrier products.
