

BioFOAM+FOG

Fat Emulsifier + Odour Suppression Blanket

NON-ACIDIC & NON-ALKALI Bio-FOAM+FOG replaces harsh acid, bleach and alkali products which can be harmful to your septic system and is not ideal for the environment.

Bio-FOAM+FOG contains naturally occurring bacteria with enzymes and readily biodegradable surfactants blended to swiftly remove grime, dirt, odour, blockages caused by fats, oil and grease which collect in pipes, floors, grease traps, effluent, sewage and waste water systems.

It will quickly remove foul odours caused by a build-up of fat, oil, grease and waste, and prevents the odour from returning with regular maintenance.

Bio-FOAM+FOG is an excellent cleaner for all hard surfaces including bathrooms, showers and toilet blocks in restaurants, motels, hotels, camping grounds and general commercial washrooms. It is very effective in public and general toilets where high traffic is experienced. After cleaning take the waste water and dispose in the urinal or toilet if no urinal is present. Over time the regular dosing of the urinal will slowly remove uric crystals removing the need to use harsh acids.

Bio-FOAM+FOG is very effective for removing organic material in drains, under benches, bar areas and coffee machines to assist in the removal of fruit fly. It has been very successful in the reduction and removal of fruit fly in food outlets.

Bio-FOAM+FOG is ideal in food processing, food serving and hospitality because it is fragrance free.

Bio-FOAM+FOG can be diluted up to 50-1.

CLEANING**

FEATURES & BENEFITS

Replaces harsh acidic, bleach and alkali chemicals

Readily biodegradable

Non-corrosive and neutral

Safe and positive for septic systems

Removes and manages odours

FRUIT FLIES

Our clients include global fast food restaurants where we manage grease trap levels, health of drains, organic material under benches and fruit fly infestations. Fruit fly breed and live where there is organic material and moisture including drains, grease traps and especially around coffee machines.

Our products remove organic material and are simple to use.

BioRANGE

Nature managing Nature

Biological cleaning – the next generation of cleaning from BioChem Solutions.

Unlike traditional bacteria based liquids which remain impotent in the water column, our patented foaming system and foaming products allow active constituents to remain in the 'inter-tidal range' where common issues lie.

SINK & DRAINAGE PIPES

SEWER WELL + GREASE TRAPS

HOW IT WORKS & WHY

Liquid bacteria work – just not effectively in the fast flowing water column. Liquid-based bacteria require large concentrations to make a difference and are quickly flushed away down stream requiring constant re-dosing – a costly exercise that's not viable in the practical world. Through the use of an expanding foam, concentrated bacteria and readily biodegradable surfactants, we are able to target the problem areas – the inter-tidal range, walls, equipment and top of pipes.

By elevating the product to these areas of interest, the triglyceride hard fat is converted to a liquid mono or diglyceride fat which is now available to all populations of bacteria in the system, further enabling the effectiveness of the treatment.

*Approved for importation and exportation in Australia, New Zealand, Fiji, Samoa and The Cook Islands by Bio-Security and other relevant government agencies.

OUR PRODUCTS

BioFOG
Bio-Agent for Fat, Oil
• Grease Removal

BioFOAM
Readily Biodegradable Foam
for Waster Systems

BioFOAM+FOG
Fat Emulsifier • Odour Suppression Blanket

BioBUGS
Fat, Oil, Grease • Odour Removal

BioCLEANER
Readily Biodegradable Fragranced
Cleaner • Odour Remover
