Bio-Zyme - Bio Pods

The safe green solution to dealing with sanitary waste

The Bio Pods is a sanitary waste disposal system. Its unique cartridge system means no cleaning, less waste, saving costs and reducing energy use.

It consists of a rigid wall-mounted sanitary unit that holds a flexible, disposable, cartridge containing biodegradable additives which cleverly seal in the waste products.

The outer cylinder comes in two sizes, with white, black, or silver finishes. While most customers prefer them wall-mounted they can also be free standing.

The cartridge consists of a cap, modesty flap, and a liner that contains biodegradable antimicrobial and deodorising additives.

Waste is removed and disposed of inside the cartridge - making this the safest, simplest sanitary waste disposal solution on the market.

- Wall-mounted streamline outer cylinder saves space, looks smart and is easy to install and maintain.
- Self-deodorizing sanitary napkin bags (cartridges) seal-in sanitary waste and are quick and easy to replace.
- A sanitary napkin receptacle system that is easy to use.
- Sealed sanitary bag with modesty flap means no one touches the waste products.
- Reduced exposure to harmful bacteria including blood borne pathogens, so there is less risk of cross infections.
- Biodegradable plastic components and deodorising chemicals are safe for the environment.
- The 'green' sanitary napkin bag and receptacle system.

Available in two colours

White and Black

Bio Bin Regular

Capacity: 13lt

Size: 650mm x 160mm x 160mm

Bio Bin Large

Capacity: 26lt

Size: 800mm x 220mm x 220mm
