

# HYSPECS SCOobi & SCOobi 2

## What is a Scoobi?

The Scoobi, short for 'Self Contained Old Oil Beautifying Implement' is the classic unit everyone knows and trusts. It's designed to transfer oil from one vessel to another while filtering out contamination in the process.

Commonly used when cleaning tanks, carrying out system maintenance, or filling tanks in new systems, the Scoobi makes oil handling clean and simple. Even fresh oil from a new drum can carry contaminants, which is why filtering before filling is always recommended. The Scoobi delivers an easy and effective solution for keeping oil clean from the start.

## Features and Benefits of Scoobi:

- Dual filtration in and out, 10 micron, useful for separate water and particle filtration ensuring ultra clean oil
- Gauge for indication that filter needs changing
- Rubber tyres and contoured handgrip for manoeuvrability and easy transportation
- IP65 rated on/off switch
- Assembled from locally sourced components for ease of service
- Relief valve protection
- Approximate dimensions 1m(h) x 0.5m(w) x 0.4m(d)
- Manufactured by Hyspecs

## Specifications:

- Transfer oil at 20 l/min
- Powered by a single phase 0.75 kW electric motor with lead & plug
- Oil is pumped via a Galtech gear pump

## Hire or Purchase a Scoobi

Lead time from ordering if not in stock is typically 5 working days.

Scoobi available for hire, with flexible half-day or full-day options. Filters are required and can be supplied as needed. Hose assemblies can also be manufactured to your specifications.

**We now offer two Scoobi options to suit your needs: the original Scoobi, trusted for its reliable oil transfer and filtration and the Scoobi 2, a slightly upgraded model with improved features.**

**See reverse for details on the Scoobi 2's enhancements.**

**\*For pricing and confirmation please contact a sales engineer at Hyspecs.**

*Images are indicative only – actual Scoobi may differ slightly.*

# HYSPECS SCOOBI 2

## What is a Scoobi 2?

The Scoobi can be used for filtered transference of oil from vessels, kidney loop filtering, removing water from oil and filling systems from drums or containers. We have improved the original Scoobi, the Scoobi 2.

### Features and Benefits of Scoobi 2:

- Improved layout and new features make it easier to use
- Range of filter options to suit the task including water absorbing
- Gauges on both filter heads
- Compact design with hose and pipe storage incorporated
- Industrial on/off switch
- Oil Transfer rate of 20 l/min
- 1 H.P. single phase motor with long lead
- Integrated drip tray to minimise mess
- Customisable with integrated pump relief valve, hour meter and crimped hoses for QRCs (enquire for pricing)
- Manufactured by Hyspecs
