

# Competing at the edge of change

The new standard for  
fluid conveyance

**EATON**

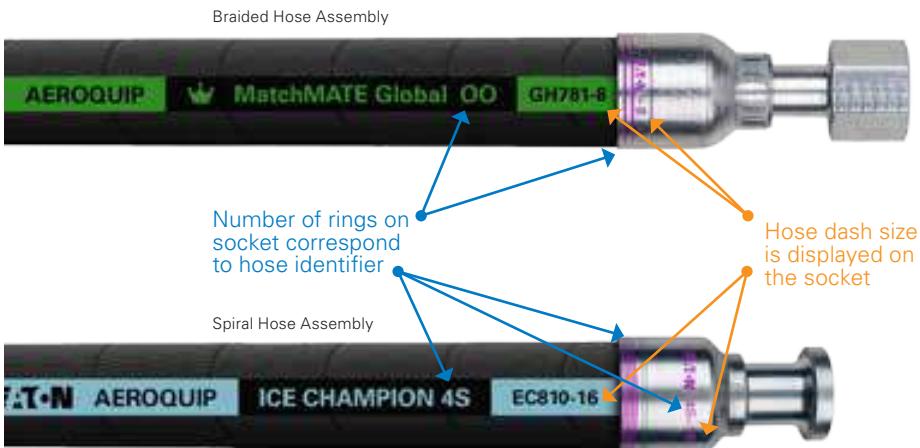

*Powering Business Worldwide*

Aeroquip provides confidence in hose assembly, corrosion and leakage protection.

### Engineered Assemblies

Eaton's Aeroquip hoses and fittings are engineered and qualified to work as a system ensuring your confidence in a high quality hose assembly. The 4-Step **MatchMate™** system for braided and spiral hose assemblies ensure proper mating of hose and qualified fittings.

### 4 Step Hose Identification System

### DURA-KOTE™ Plating Technology

Hose fittings that will now offer 3x the corrosion protection on carbon steel fittings as compared to competitive hose fittings. Eaton's DURA-KOTE fittings provide up to 1000 hours of corrosion protection. This is a huge step forward in metal fitting corrosion protection.

### 3X Carbon Steel Corrosion Protection

Corrosion of current carbon steel adapters after 650 hours of exposure to salt spray testing.

### DURA-SEAL™ Technology

This patent-pending innovation from Eaton eliminates hose assembly cool-down leakage, while extending hose assembly life, reducing equipment down-time.

### Class 0 Cool-Down Leakage Protection

4S/6S Fitting

# Important safety information

## Assembly product warning and How to order

A

### Eaton's Aeroquip Hose and Fitting Assembly Product Warning

Flexible hose lines offer many advantages over rigid tubing including routing ease, vibration absorption, sound deafening and the ability to accommodate movement of connected components. However, hose lines require caution in use not only to provide long service, but also to guard against potentially dangerous failure.

#### Important

The user should carefully observe the precautions listed in this catalog, including the recommendations on the selection of hose and fittings on the relevant pages, and the pages on fluid compatibility. In addition, care should be taken not to exceed the minimum bend radius listed for each hose size and type in the hose section. Maximum operating pressure should not exceed pressures listed in the hose data. Instructions for assembling fittings to different hose should be followed carefully to ensure the performance of the completed assembly.

**WARNING** Eaton fitting tolerances are engineered to match Eaton's Aeroquip hose tolerances. The use of Eaton fittings on hose supplied by other manufacturers and/or the use of Eaton's Aeroquip hose with fittings supplied by other manufacturers may result in the production of unreliable

and unsafe hose assemblies and is neither recommended nor authorized by Eaton or any of its affiliates or subsidiaries.

**WARNING** Application considerations must be observed in selecting appropriate components for the application of these products contained herein. The failure to follow the recommendations set forth in this catalog may result in an unstable application which may result in serious personal injury or property damage.

EATON OR ANY OF ITS AFFILIATES OR SUBSIDIARIES SHALL NOT BE SUBJECT TO AND DISCLAIMS ANY OBLIGATIONS OR LIABILITIES (INCLUDING BUT NOT LIMITED TO ALL CONSEQUENTIAL, INCIDENTAL AND CONTINGENT DAMAGES) ARISING FROM TORT CLAIMS (INCLUDING WITHOUT LIMITATION NEGLIGENCE AND STRICT LIABILITY) OR OTHER THEORIES OF LAW WITH RESPECT TO ANY HOSE ASSEMBLIES NOT PRODUCED FROM GENUINE AEROQUIP HOSE FITTINGS, HOSE AND AEROQUIP APPROVED EQUIPMENT, AND IN CONFORMANCE WITH EATON'S AEROQUIP PROCESS AND PRODUCT INSTRUCTIONS FOR EACH SPECIFIC HOSE ASSEMBLY.

Failure to follow these processes and product instructions and limitations could lead to premature hose assembly failures resulting in property damage, serious injury or death.

#### Routing

If the user follows the recommendations on hose line routing and installation as provided herein, improved safety and longer service life of any hose installation will result.

#### Hose Installation

Proper installation of the hose is essential to the proper operation and safe use of the hose and related equipment. Improper installation of the hose can result in serious injury or property damage caused by spraying fluids or flying projectiles. In order to avoid serious bodily injury or property damage resulting from improper installation of the hose, you should carefully review the information in this catalog regarding hose installation.

Some of the factors you must consider in installing the hose properly are:

- Changes in length
- Proper bend radius
- Protection from high temperature sources
- Elbows and adapters to relieve strain

- Rubbing or abrasion
- Twisting
- Improper hose movement

These factors and the other information in this catalog regarding hose installation should be considered by you before installing the hose. If you have any questions regarding proper hose installation, please contact Eaton Technical Support at 1-888-258-0222.

#### Hose Maintenance

Proper maintenance of the hose is essential to the safe use of the hose and related equipment. Hose should be stored in a dry place. Hose should also be visually inspected. Any hose that has a cut or gouge in the cover that exposes the reinforcement should be retired from service. Hoses should also be inspected for kinking or broken reinforcement. If the outside diameter of the hose is reduced by 20% at the spot where it is bent then the hose should be retired from service. Inadequate attention to maintenance of the hose can result in hose leakage, bursting, or other failure which can cause serious bodily injury or property damage from spraying fluids, flying projectiles, or other substances.

### How to order

Accurate processing and prompt delivery of your order depends on easy identification of your requirements. Please order Aeroquip brand parts using correct part numbers as described in this catalog. Inquiries and orders should be directed to your Aeroquip distributor or:

**Eaton**  
14615 Lone Oak Road  
Eden Prairie, MN 55344  
952-937-9800;  
888-258-0222;  
Fax: 952-974-7722  
[www.eaton.com/hydraulics](http://www.eaton.com/hydraulics)

#### Part numbers and dash sizes

Dash size designates the nominal size in 16th of an inch. This number immediately follows the part number and is separated from it with a dash.

#### Dimensions

Dimensions given in this catalog for Aeroquip products are approximate and should be used for reference only. Exact dimensional information for a given product is subject to change and varying tolerances; contact Eaton directly for full current information.

#### **WARNING**

#### Hose assemblies

Eaton manufactures the terminal ends of our hose fittings to the appropriate requirements established by the SAE. Therefore, the performance ratings of these hose fittings meet the SAE requirements. It is possible to order a hose assembly with a fitting terminal end that has a performance rating lower than the hose rating. When ordering hose assemblies, please keep the

connecting end performance rating in mind since this may affect overall hose assembly performance. Hose assembly components (hose and fittings) are easily assembled in the field. However, factory assembled reusable and crimped hose assemblies are available. For complete information, contact Eaton.

## Selection, installation and maintenance of hose and assemblies

The following recommendations on selection, installation and maintenance of hose assemblies were established by the SAE in 1991. Please read these general instructions carefully. More detailed information on many of these subjects is covered in this catalog.

### 1. Scope

Hose (also includes hose assemblies) has a finite life and there are a number of factors which will reduce its life. This recommended practice is intended as a guide to assist system designers and/or users in the selection, installation, and maintenance of hose.

The designers and users must make a systematic review of each application and then select, install, and maintain the hose to fulfill the requirements of the application. The following are general guidelines and are not necessarily a complete list.

**⚠ Warning:** improper selection, installation, or maintenance may result in premature failures, bodily injury, or property damage.

### 2. References

#### 2.1 Applicable documents

The following publications form a part of this specification to the extent specified herein. The latest issue of SAE publications shall apply.

##### 2.1.1 SAE publications

Available from SAE,  
400 Commonwealth Drive,  
Warrendale, PA 15096-0001.

J516—Hydraulic hose fittings

J517—Hydraulic hose

### 3. Selection

The following is a list of factors which must be considered before final hose selection can be made.

#### 3.1 Pressure

After determining the system pressure, hose selection must be made so that the recommended maximum operating pressure is equal to or greater than the system pressure. Surge pressures higher than the maximum operating pressure will shorten hose life and must be taken into account by the hydraulic designer.

#### 3.2 Suction

Hoses used for suction applications must be selected to insure the hose will withstand the negative pressure of the system.

#### 3.3 Temperature

Care must be taken to insure that fluid and ambient temperatures, both static and transient, do not exceed the limitations of the hose. Special care must be taken when routing near hot manifolds.

#### 3.4 Fluid compatibility

Hose selection must assure compatibility of the hose tube, cover and fittings with the fluid used. Additional caution must be observed in hose selection for gaseous applications.

#### 3.5 Size

Transmission of power by means of pressurized fluid varies with pressure and rate of flow. The size of the components must be adequate to keep pressure losses to a minimum and avoid damage to the hose due to heat generation or excessive turbulence.

#### 3.6 Routing

Attention must be given to optimum routing to minimize inherent problems.

#### 3.7 Environment

Care must be taken to insure that the hose and fittings are either compatible with or protected from the environment to which they are exposed. Environmental conditions such as ultraviolet light, ozone, salt water, chemicals, and air pollutants can cause degradation and premature failure and, therefore, must be considered.

#### 3.8 Mechanical loads

External forces can significantly reduce hose life. Mechanical loads which must be considered include excessive flexing, twist, kinking, tensile or side loads, bend radius, and vibration. Use of swivel-type fittings or adapters may be required to insure no twist is put into the hose. Unusual applications may require special testing prior to hose selection.

#### 3.9 Abrasion

While hose is designed with a reasonable level of abrasion resistance, care must be taken to protect the hose from excessive abrasion which can result in erosion, snagging and cutting of the hose cover. Exposure of the reinforcement will significantly accelerate hose failure.

#### 3.10 Proper end fitting

Care must be taken to insure proper compatibility exists between the hose and coupling selected based on the manufacturer's recommendations substantiated by testing to industry standards such as SAE J517. End fitting components from one manufacturer are usually not compatible with end fitting components supplied by another manufacturer (i.e., using a hose fitting nipple from one manufacturer with a hose socket from another manufacturer). It is the

responsibility of the fabricator to consult the manufacturer's written instructions or the manufacturer directly for proper end fitting componentry.

#### 3.11 Length

When establishing proper hose length, motion absorption, hose length changes due to pressure, as well as hose and machine tolerances must be considered.

#### 3.12 Specifications and standards

When selecting hose, government, industry and manufacturers' specifications and recommendations must be reviewed as applicable.

#### 3.13 Hose cleanliness

Hose components vary in cleanliness levels. Care must be taken to insure that the assemblies selected have an adequate level of cleanliness for the application.

#### 3.14 Electrical conductivity

Certain applications require that hose be nonconductive to prevent electrical current flow. Other applications require the hose to be sufficiently conductive to drain off static electricity. Hose and fittings must be chosen with these needs in mind.

### 4. Installation

After selection of proper hose, the following factors must be considered by the installer.

#### 4.1 Pre-installation inspection

Prior to installation, a careful examination of the hose must be performed. All components must be checked for correct style, size and length. In addition, the hose must be examined for cleanliness, I.D. obstructions, blisters, loose cover, or any other visible defects.

# A Hose selection

General hose selection information

A

## Selection, installation and maintenance of hose and assemblies

The following recommendations on selection, installation and maintenance of hose assemblies were established by the SAE in 1991. Please read these general instructions carefully. More detailed information on many of these subjects is covered in this catalog.

### 4.2 Follow manufacturers' assembly instructions

Hose assemblies may be fabricated by the manufacturer, an agent for or customer of the manufacturer, or by the user. Fabrication of permanently attached fittings to hydraulic hose requires specialized assembly equipment. Field attachable fittings (screw style and segment clamp style) can usually be assembled without specialized equipment although many manufacturers provide equipment to assist in the operation.

SAE J517 hose from one manufacturer is usually not compatible with SAE J516 fittings supplied by another manufacturer. It is the responsibility of the fabricator to consult the manufacturer's written assembly instructions or the manufacturers directly before intermixing hose and fittings from two manufacturers. Similarly, assembly equipment from one manufacturer is usually not interchangeable with that of another manufacturer. It is the responsibility of the fabricator to consult the manufacturer's written instructions or the manufacturer directly for proper assembly equipment. Always follow the manufacturer's instructions for proper preparation and fabrication of hose assemblies.

### 4.3 Minimum bend radius

Installation at less than minimum bend radius may significantly reduce hose life. Particular attention must be given to preclude sharp bending at the hose/fitting juncture.

### 4.4 Twist angle and orientation

Hose installations must be such that relative motion of machine components produces bending of the hose rather than twisting.

### 4.5 Securement

In many applications, it may be necessary to restrain, protect, or guide the hose to protect it from damage by unnecessary flexing, pressure surges, and contact with other mechanical components. Care must be taken to insure such restraints do not introduce additional stress or wear points.

### 4.6 Proper connection of ports

Proper physical installation of the hose requires a correctly installed port connection while insuring that no twist or torque is put into the hose.

### 4.7 Avoid external damage

Proper installation is not complete without insuring that tensile loads, side loads, kinking, flattening, potential abrasion, thread damage, or damage to sealing surfaces are corrected or eliminated.

### 4.8 System check out

After completing the installation, all air entrapment must be eliminated and the system pressurized to the maximum system pressure and checked for proper function and freedom from leaks.

**Note:** Avoid potential hazardous areas while testing.

### 5. Maintenance

Even with proper selection and installation, hose life may be significantly reduced without a continuing maintenance program. Frequency should be determined by the severity of the application and risk potential. A maintenance program should include the following as a minimum.

### 5.1 Hose storage

Hose products in storage can be affected adversely by temperature, humidity, ozone, sunlight, oils, solvents, corrosive liquids and fumes, insects, rodents and radioactive materials. Storage areas should be relatively cool and dark and free of dust, dirt, dampness and mildew.

### 5.2 Visual inspection

Any of the following conditions requires replacement of the hose:

- a. Leaks at fitting or in hose (leaking fluid is a fire hazard)
- b. Damaged, cut, or abraded cover (any reinforcement exposed)
- c. Kinked, crushed, flattened, or twisted hose
- d. Hard, stiff, heat cracked or charred hose
- e. Blistered, soft, degraded, or loose cover
- f. Cracked, damaged, or badly corroded fittings
- g. Fitting slippage on hose

### 5.3 Visual inspection

The following items must be tightened, repaired, or replaced as required:

- a. Leaking port conditions
- b. Clamps, guards, shields
- c. Remove excessive dirt buildup
- d. System fluid level, fluid type, and any air entrapment

### 5.4 Functional test

Operate the system at maximum operating pressure and check for possible malfunctions and freedom from leaks.

**Note:** Avoid potential hazardous areas while testing.

### 5.5 Replacement intervals

Specific replacement intervals must be considered based on previous service life, government or industry recommendations, or when failures could result in unacceptable down time, damage, or injury risk.

## Numbering system

### Numbering system

#### Cut length hose

Cut lengths of hose should be ordered as shown below by specifying lengths in inches.

For numeric part numbers:

**2651- 10- 00484**

**Hose type** \_\_\_\_\_

**Hose size (in 16th of an inch)** \_\_\_\_\_

**Cut length (in inches)** \_\_\_\_\_

last digit is in 1/8th of an inch 00484 = 48 1/2 inches

For alpha-numeric part numbers:

**FC300- 08- 00484**

**Hose type** \_\_\_\_\_

**Hose dash size** \_\_\_\_\_

**Cut length (in inches)** \_\_\_\_\_

last digit is in 1/8th of an inch **00484 = 48 1/2 inches**

#### Bulk hose

Bulk hose should be ordered by specifying length in feet as shown below.

**500 ft.- 2651- 10**

**Complete number quantity (in feet)** \_\_\_\_\_

**Hose type** \_\_\_\_\_

**Hose size (in 16ths of an inch)** \_\_\_\_\_

**Notes:** Length tolerance for hose, assemblies and sleeves is:

Up to and including 12 inches:  $\pm 1/8"$

Above 12 inches to and including 18 inches:  $\pm 3/16"$

Above 18 inches to and including 36 inches:  $\pm 1/4"$

Above 36 inches:  $\pm 1\%$  of length

# Hose selection

## Hose dash size to maximum operating pressure

### Hose dash size to maximum operating pressure

This table is intended as a guide in the selection of hose by maximum operating pressure. It is not a guarantee. Final selection is further dependent on fluid and ambient temperature, concentration of fluid, intermittent or continuous exposure, etc. For further details on a specific hose see the respective catalog pages or contact Eaton.

#### Hose tube ID chart

- 1. Synthetic rubber
- 3. Thermoplastic
- 5. Special application hose
- 2. PTFE
- 4. AQP
- 6. EPDM

† Pressure rating with reusable style fittings.

‡ Pressure rating with global crimp style fittings.

§ 10,000 psi for static jack hose applications.

\* See hose page for dash sizes not listed.

†† 50 psi max with band clamp style fittings.

\*\*\*Based on 2:1 safety factor.

See hose page for details.

## Thread style pressure performance

Eaton closely follows industry standards in design and in application recommendations. A key principle within ISO, SAE and other standards bodies is that the **maximum dynamic working pressure of the hose or adapter assembly** is the lesser of the hose and end connector(s) used.

The first table below provides excerpts from standard industry pressure rating charts for connector types as published by SAE (Society of Automotive Engineers).

**Note:** The tables below are applicable for low carbon free machining steels typically used in Fluid Power connections. For port type connections, the material and design of the port must be considered and may reduce expected strength.

For high pressure applications Eaton recommends the use of more robust connector designs such as Code 62 flange or O-Ring face seal.

# A Hose selection

## Hose fitting pressure charts

A

## Hose fitting pressure charts

### All Eaton components

With higher pressures it is critical to know the construction materials and manufacturing method to ensure performance. When all components in a system are

Eaton supplied, for example an Eaton hose fitting is mated with an Eaton adapter or tube fitting, the combination may be used at higher pressures with confidence.

These higher ratings are noted in the chart below.

**Maximum dynamic working pressure of the hose or adapter assembly is the lesser of the hose and end connector(s) used.**

### All Eaton pressure ratings<sup>1</sup>

#### Note:

1) These ratings are based on both brazed and one piece construction, one-piece pressures could be increased. Please contact Eaton in these situations.

2) This rating is for thin walled adapters or fittings, the use of manifolds or oversized female ports would allow full rated male pressures.

### Dynamic operating pressure

Dynamic operating conditions refers to cyclic pressure impulses, usually considered to be from near zero to the highest system pressure. Hydraulic standards typically represent these as square waves and expect a component to handle on the order of 200,000 to well over one million such cycles with a burst: operating safety factor of 4:1. The above charts are created with dynamic applications in mind. Most industrial and mobile hydraulic systems fit the dynamic operating pressure profile, for example hydraulic work circuits on construction equipment or on injection molding equipment.

### Static operating pressure

Static operating conditions typically range from zero to operating pressure, but with far fewer cycles expected for the system life – perhaps 30,000 to 50,000 cycles and sharp pressure spikes are not expected, allowing a burst: operating safety factor of 3:1 or less. For static operating conditions, the Eaton ratings above can be safely increased by 25-30%. For example, a 3000 psi dynamic rated hose might be used in a 4000 psi static pressure application. Typical examples of static applications are water blast and hydraulic jacking.

### Materials

The above tables represent performance using common low carbon steel material. Other materials and their

characteristics influence these ratings. Medium carbon steels or heat treated materials can support higher working pressures. Conversely non-ferrous materials such as aluminum or brass will have reduced capability – as much as 50%, or less, pressure handling capability. It is important to consider material properties in designing a system to ensure pressure rating compatibility of all materials.

### Design & application

Eaton's Fluid Conveyance engineering and support teams have many decades of experience in designing, manufacturing and servicing hydraulic and other fluid conveyance systems globally. Eaton's product line is designed as a comprehensive collection of hose, fittings,

connectors, couplings and accessories that allow a system designer to select components to complete a fluid power system or a service technician to replace a component with confidence. The individual product specifications, the above pressure ratings and other technical information are intended as supporting guidelines for system design and service needs and are not to be construed as a guarantee of performance of the system or of individual Eaton components. Eaton provides comprehensive technical support so please call with questions about pressure needs not covered by these charts or for specific application support.

## Fluid compatibility

This chart indicates the suitability of various elastomers and metals for use with fluids to be conveyed. It is intended as a guide only and is not a guarantee. Final selection of the proper hose style, seal, or material of metal components is further dependent on many factors including pressure, fluid and ambient temperature, concentration, duration of exposure, etc.

### How to use the chart

- The chart has separate sections for rating elastomers for use as hose inner tubes and as seals. Ratings for a given elastomer may not always be the same in both sections.
- Both the elastomer and the metal must be considered when determining suitability of a combination for a hose assembly, adapter with o-ring, swivel joint or coupling.
- Locate the fluid to be conveyed and determine the suitability of the elastomeric and metal components according to the resistance ratings shown for each.
- Specific hose part numbers can be found under the inner tube material groupings in the Hose Tube Identification Chart.
- Dimensional and operating specifications for each hose can be found on the catalog pages shown with each hose part number.
- Information on o-rings and seal options for swivel joints and couplings, and how to specify them, are shown in the respective sections of this catalog.
- For further details on the products shown in this catalog, and their applications, contact:

### Eaton

14615 Lone Oak Road,  
Eden Prairie, MN 55344  
USA  
952-937-9800  
Fax: 952-974-7722  
1-888-258-0222  
[www.eaton.com](http://www.eaton.com)

### Resistance key rating

**E** = Excellent – Fluid has little or no effect.

**G** = Good – Fluid has minor to moderate effect.

**C** = Conditional – Service conditions should be described to Eaton Aeroquip for determination of suitability for application.

**U** = Unsatisfactory

The differences between ratings "E" and "G" are relative. Both indicate satisfactory service. Where there is a choice, the materials rated "**E**" may be expected to give better or longer service than those rated "**G**".

**NOTE:** Special precautions are necessary in gaseous applications due to the potential volume of gaseous fluid in the system. Unless the cover is perforated, hose styles with rubber or thermoplastic covers are not suitable for gases above 250 psi. Hose styles with perforated covers are so noted in their construction descriptions.

### ⚠ WARNING: Compatibility

of hose fittings with conveyed fluid is an essential factor in avoiding chemical reactions that may result in release of fluids or failure of the connection with the potential of causing severe personal injury or property damage.

## Fluid compatibility

This chart is intended for reference use only  
The information in this chart pertains strictly to material compatibility and is not intended to be used as an application guide. For information on specific applications not included in this catalog, please contact Eaton Aeroquip.

Note 1 - Rubber-covered hose must be perforated to allow gas to escape.

Note 2 - Due to the widely different additives in these fluids, testing should be done on the actual fluid being considered.

Note 2 - Due to the widely different additives in these fluids, testing should be done on the actual fluid being considered.

**Hydraulic fluids & lubricating oils**

The following is a representative list of fluids and manufacturers. The fluids are grouped under generic "family" heads and arranged alphabetically. For each generic "family" listing we have included maximum fluid temperature recommendations for the six hose classifications on page A-15 (1 through 6). Two maximum fluid temperature ratings are listed under designations of "H" and "LP". The "H" designation is for hydraulic service up to the maximum rated operating pressure of any particular hose in the classification. The "LP" designation is for low-pressure service such as lubricating oil systems or low-pressure hydraulic return lines. The letter "U" in the box indicates unsatisfactory resistance to the fluid type. Fluid temperature ratings are predicated on maximum allowable ambient temperatures as follows:

**Classifications 1 and 3**

(Synthetic rubber and thermoplastic elastomer)

"H" fluid temp. ratings: +140°F ambient

"LP" fluid temp. ratings: +180°F ambient

**Classification 2 (PTFE)**

"H" fluid temp. ratings: +400°F ambient

"LP" fluid temp. ratings: +400°F ambient

**Classification 4 (AQP)**

"H" fluid temp. ratings: +160°F ambient

"LP" fluid temp. ratings: +250°F ambient

(If "H" fluid temperature is +225°F or less, allowable ambient temperature may be increased to +200°F)

**Ambient temperatures in excess of those recommended, in conjunction with maximum fluid temperatures, can materially shorten the service life of the hose.**

**Caution:** The fluid manufacturer's recommended maximum operating temperature for any specific name brand fluid should be scrupulously observed by the user. These recommended temperatures can vary widely between name brands of different fluid compositions, even though they fall into the same generic "family" of fluids. Exceeding the manufacturer's recommended maximum temperature can result in fluid breakdown, producing by-products that are harmful to elastomeric products, as well as other materials in the system. If a manufacturer's recommended maximum temperature for his specific fluid is lower than that for the hose rating, it should take precedence over the hose rating for service usage.

## Flow capacities of hose assemblies at suggested flow velocities

The chart below is designed and provided as an aid in the determination of the correct hose size.

**Example:** At 13 U.S. gallons per minute, what is proper hose size within the suggested velocity range for pressure lines?

**Solution:** Locate 13 U.S. gallons per minute in the left hand column and 10 feet per second in the right hand column (the center of the suggested velocity range for pressure lines). Lay a straightedge across the two points. The inside diameter is shown in the center column nearest the straight edge.

For suction hose, follow the same procedure except use suggested velocity range for pump inlet lines in the right hand column.

### Based on formula

$$\text{Area (sq. in.)} = \frac{\text{G.P.M.} \times 0.3208}{\text{Velocity (FT./SEC.)}}$$

\* Suggestions are for oils having a maximum viscosity of 315 S.S.U. at +100°F (+38°C) and operating at temperatures between +65°F and +155°F (+54°C to +69°C). Under certain conditions, velocities in pressure lines can be increased up to 25 feet per second. Contact Aeroquip® with specific information on your application.

### Conversions

To convert U.S. gallons into Imperial gallons multiply U.S. gallons by 0.83267. Imperial gallons into U.S. gallons multiply Imperial gallons by 1.20095. U.S. gallons to liters multiply by 3.785. Liters to U.S. gallons, multiply by 0.2642.

# Hose selection

Flow capacities pressure drop

A

## Flow capacities pressure drop

Pressure drop in psi (pounds per square inch)/gpm (gallons per minute) for 10 feet of hose (smooth bore) without fittings.

Fluid specification:  
Specific gravity = 0.85;  
Viscosity =  $\nu$  =  
20 centistokes (C.S.),  
(20 C.S. = 97 S.S.U.).

\* Pressure drop values listed are typical of many petroleum based hydraulic oils at approximately +100°F (+38°C). Differences in fluids, fluid temperature and viscosity can increase or decrease actual pressure drop compared to the values listed.

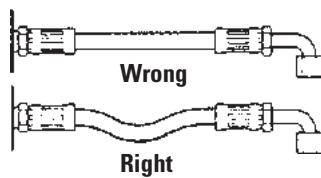

### To convert

To convert U.S. gallons into Imperial gallons multiply U.S. gallons by 0.83267. Imperial gallons into U.S. gallons multiply Imperial gallons by 1.20095. U.S. gallons to litres multiply by 3.785. Litres to U.S. gallons, multiply by 0.2642.

## Hose routing and installation

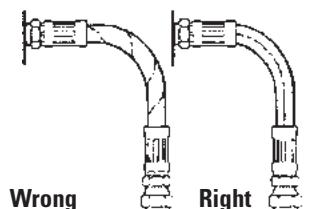

### 1. Provide for length change.

In straight hose installations, allow enough slack in the hose line to provide for changes in length that will occur when pressure is applied. This change in length can be from +2% to -4%.

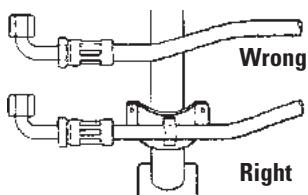

### 2. Avoid twisting and orient properly.

Do not twist hose during installation. This can be determined by the printed layline on the hose. Pressure applied to a twisted hose can cause hose failure or loosening of connections.

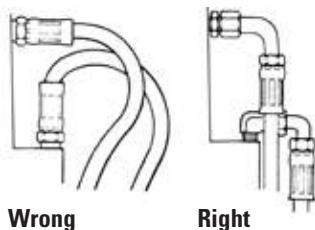

### 3. Protect from hazardous environment.

Keep hose away from hot parts. High ambient temperature will shorten hose life. If you can not route it away from the heat source, insulate it. (See Spring Guards page K-2)

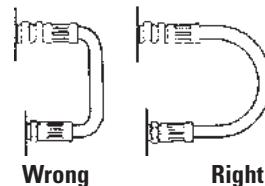

### 4. Avoid mechanical strain.

Use elbows and adapters in the installation to relieve strain on the assembly and to provide easier and neater installations that are accessible for inspection and maintenance.

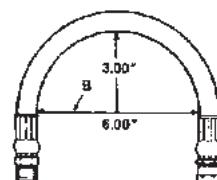

### 5. Use proper bend radius.

Keep the bend radius of the hose as large as possible to avoid collapsing of the hose and restriction of flow. Follow catalog specs on minimum bend radii.

### 6. Use proper bend radius (cont'd).

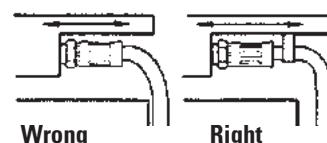

Minimum bend radius is measured on the inside bend of the hose. To determine minimum bend, divide the total distance between ends (B length) by 2. For example, B=6, minimum bend radius=3.

### 7. Secure for protection.

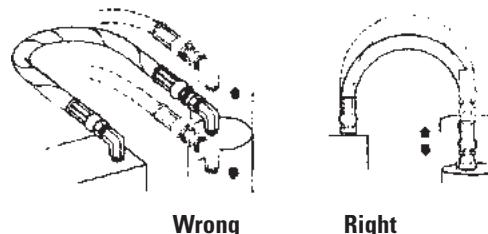

Install hose runs to avoid rubbing or abrasion. Use Aeroquip Hose Clamps to support long runs of hose or to keep hose away from moving parts. It is important that the clamps not allow the hose to move. This movement will cause abrasion and premature hose failure.

See Hose Clamps page K-5.

### 8. Avoid improper hose movement.

Make sure relative motion of the machine components produces bending rather than twisting of the hose. Hose should be routed so that the flex is in the same plane as the equipment movement.

Refer to safety information regarding hose installation on pages A-2 and A-3.

# Hose selection

## Analyzing failures

A

### Analyzing failures

Everyone in maintenance encounters hose failures. Normally, there is no problem. The hose is replaced and the equipment goes back in operation. Occasionally the failures come too frequently – the same equipment with the same problems keep popping up. At this point the task is to determine and correct the cause of these repeated failures.

#### Improper application

Beginning with the most obvious, the most common cause of hose failures – Improper application – compare the hose specifications with the requirements of the application.

Pay particular attention to the following areas:

- The maximum operating pressure of the hose.
- The recommended temperature range of the hose.
- Whether the hose is rated for vacuum service.
- The fluid compatibility of the hose.

Check all of these areas against the requirements of the application. If they don't match up, you need to select another hose. It's a good idea at this point to call on your local hose distributor for assistance in selecting the proper hose. Eaton's distributors, for example, are well equipped to perform this service for you.

Distributor personnel attend special training courses in hydraulics and hose application conducted by the company. Or, if your problem is particularly difficult, the distributor can call on the services of Eaton's field engineering staff. The company will send in a hose and hydraulic specialist to study the problem and come up with a solution.

#### Improper assembly and installation

The second major cause of premature hose failure is improper assembly and installation procedures. This can involve anything from using the wrong fitting on a hose, to poor routing of the hose.

Eaton provides excellent training material that you can use to combat this problem. A little time spent in training your maintenance people could pay big dividends in reduced downtime.

You can make use of the material available from Eaton to improve your hose assembly and installation techniques.

This material is available free from

**Eaton Corporation**  
14615 Lone oak road,  
Eden prairie, MN 55344  
USA, 952/937-9800.

#### External damage

External damage can range from abrasion and corrosion, to hose that is crushed by a lift truck. These are problems that can normally be solved simply once the cause is identified. The hose can be re-routed or clamped, or a fire sleeve or abrasion guard can be used.

In the case of corrosion, the answer may be as simple as changing to a hose with a more corrosion resistant cover or re-routing the hose to avoid the corrosive element.

#### Faulty equipment

Too frequent or premature hose failure can be the symptom of a malfunction in your equipment. This is a factor that should be considered since prompt corrective action can sometimes avoid serious and costly equipment breakdown. Reprints of an article on "Troubleshooting hydraulic systems," which tells you how to spot problems in a hydraulic system are available from Eaton.

#### Faulty hose

Occasionally a failure problem will lie in the hose itself. The most likely cause of a faulty rubber hose is old age. Check the lay line on the hose to determine the date of manufacture. (Q299 means second quarter 1999.) The hose may have exceeded its recommended shelf life. If you suspect that the problem lies in the manufacture of the hose (and don't jump to this conclusion until you have exhausted the other possibilities) contact your distributor. Given effective quality control methods, the odds of a faulty batch of hose being released for sale are extremely small. So make sure that you haven't overlooked some other problem area.

**2. Symptom:** The hose is cracked both externally and internally but the elastomeric materials are soft and flexible at room temperature.

**Cause:** The probable reason is intense cold ambient conditions while the hose was flexed. Most standard hoses are rated to -40°F (-40°C). Some AQP hoses are rated at -55°F (-49°C). Military specified hoses are generally rated to -65°F (-54°C). PTFE hose is rated to -100°F (-73°C). Some Everflex Polyon thermoplastic hoses are rated at -65°F (-54°C).

**3. Symptom:** The hose has burst and examination of the wire reinforcement after stripping back the cover reveals random broken wires the entire length of the hose.

**Cause:** This would indicate a high frequency pressure impulse condition. SAE impulse test requirements for a double wire braid reinforcement are 200,000 cycles at 133% of recommended working pressure. The SAE impulse test requirements for a four spiral wrapped reinforcement (100R12) are 500,000 cycles at 133% maximum operating and at +250°F (121°C). If the extrapolated impulses in a system amount to over a million in a relatively short time a spiral reinforced hose would be the better choice.

## Analyzing failures

**4. Symptom:** The hose has burst, but there is no indication of multiple broken wires the entire length of the hose. The hose may have burst in more than one place.

**Cause:** This would indicate that the pressure has exceeded the minimum burst strength of the hose. Either a stronger hose is needed or the hydraulic circuit has a malfunction which is causing unusually high pressure conditions.

**5. Symptom:** Hose has burst. An examination indicates the wire braid is rusted and the cover has been cut, abraded or deteriorated badly.

**Cause:** The primary function of the cover is to protect the reinforcement. Elements that may destroy or remove the hose covers are:

1. Abrasion
2. Cutting
3. Battery acid
4. Steam cleaners
5. Chemical cleaning solutions
6. Muriatic acid (for cement clean-up)
7. Salt water
8. Heat
9. Extreme cold

Once the cover protection is gone the wire reinforcement is susceptible to attack from moisture or other corrosive matter.

**6. Symptom:** Hose has burst on the outside bend and appears to be elliptical in the bent section. In the case of a pump supply line, the pump is noisy and very hot. The exhaust line on the pump is hard and brittle.

**Cause:** Violation of the minimum bend radius is most likely the problem in both cases. Check the minimum bend radius and make sure that the application is within specifications. In the case of the pump supply line partial collapse of the hose is causing the pump to cavitate creating both noise and heat. This is a most serious situation and will result in catastrophic pump failure if not corrected.

**7. Symptom:** Hose appears to be flattened out in one or two areas and appears to be kinked. It has burst in this area and also appears to be twisted.

**Cause:** Torquing of a hydraulic control hose will tear loose the reinforcement layers and allow the hose to burst through the enlarged gaps between the braided plait of wire strands. Use swivel fittings or joints to be sure there is no twisting force on a hydraulic hose.

**8. Symptom:** Hose type has broken loose from the reinforcement and piled up the end of the hose. In some cases it may protrude from the end of the hose fitting.

**Cause:** The probable cause is high vacuum or the wrong hose for vacuum service. No vacuum is recommended for double wire braid, 4 and 6 spiral wire hose unless some sort of internal coil support is used. Even though a hose is rated for vacuum service, if it is kinked, flattened out or bent too sharply this type of failure may occur.

**9. Symptom:** Hose has burst about six to eight inches away from the end fitting. The wire braid is rusted. There are no cuts or abrasions of the outer cover.

**Cause:** Improper assembly of the hose end fitting allowing moisture to enter around the edge of the fitting socket. The moisture will wick through the reinforcement. The heat generated by the system will drive it out around the fitting area but six to eight inches away it will be entrapped between the inner line and outer cover causing corrosion of the wire reinforcement.

**10. Symptom:** There are blisters in the cover of the hose. If one pricks the blisters, oil will be found in them.

**Cause:** A minute pin hole in the hose tube is allowing the high pressure oil to seep between it and the cover. Eventually it will form a blister wherever the cover adhesion is weakest. In the case of a screw together reusable fitting insufficient lubrication of the hose and fitting can cause this condition because the dry tube will adhere to the rotating nipple and tear enough to allow seepage. Faulty hose can also cause this condition.

**11. Symptom:** Blistering of the hose cover where a gaseous fluid is being used.

**Cause:** The high pressure gas is effusing through the hose tube, gathering under the cover and eventually forming a blister wherever the adhesion is weakest. Specially constructed hoses are available for high pressure gaseous applications. Your supplier can advise you on the proper hose to use in these cases.

**12. Symptom:** Fitting blew off of the end of the hose.

**Cause:** It may be that the wrong fitting has been put on the hose. Recheck manufacturer's specifications and part numbers. In the case of a crimped fitting the wrong machine setting may have been used resulting in over or under crimping. The socket of a screw together fitting for multiple wire braided hose may be worn beyond its tolerance. The swaging dies in a swaged hose assembly may be worn beyond the manufacturer's tolerances. The fitting may have been applied improperly to the hose. Check manufacturer's instructions. The hose may have been installed without leaving enough slack to compensate for the possible 4% shortening that may occur when the hose is pressurized. This will impose a great force on the fitting. The hose itself may be out of tolerance.

**13. Symptom:** The tube of the hose is badly deteriorated with evidences of extreme swelling. In some cases the hose tube may be partially "washed out."

**Cause:** Indications are that the hose tube is not compatible with the agent being carried. Even though the agent is normally compatible, the addition of heat can be the catalyst that can cause inner liner deterioration. Consult your hose supplier for a compatibility list or present him with a sample of the fluid being conducted by the hose for analysis. Make sure that the operating temperatures both internal and external do not exceed recommendations.

# Hose selection

## Analyzing failures

A

### Analyzing failures

**14. Symptom:** Hose has burst. The hose cover is badly deteriorated and the surface of the rubber is crazed.

**Cause:** This could be simply old age. The crazed appearance is the effect of weathering and ozone over a period of time. Try to determine the age of the hose. Some manufacturers print or emboss the cure date on the outside of the hose. As an example, Aeroquip hose would show "4Q01" which would mean that the hose was manufactured during the fourth quarter (October, November or December) of 2001.

**15. Symptom:** Hose is leaking at the fitting because of a crack in the metal tube adjacent to the braze on a split flange head.

**Cause:** Because the crack is adjacent to the braze and not in the braze this is a stress failure brought on by a hose that is trying to shorten under pressure and has insufficient slack in it to do so. We have cured dozens of these problems by lengthening the hose assembly or changing the routing to relieve the forces on the fitting.

**16. Symptom:** A spiral reinforced hose has burst and literally split open with the wire exploded out and badly entangled.

**Cause:** The hose is too short to accommodate the change in length occurring while it is pressurized.

**17. Symptom:** Hose is badly flattened out in the burst area. The tube is very hard down stream of the burst but appears normal up stream of the burst.

**Cause:** The hose has been kinked either by bending it too sharply or by squashing it in some way so that a major restriction was created. As the velocity of the fluid increases through the restriction the pressure decreases to the vaporization point of the fluid being conveyed. This is commonly called cavitation, and causes heat and rapid oxidation to take place which hardens the tube of the hose down stream of the restriction.

**18. Symptom:** Hose has not burst but it is leaking profusely. A bisection of the hose reveals that the tube has been gouged through to the wire braid for a distance of approximately two inches.

**Cause:** This failure would indicate that erosion of the hose tube has taken place. A high velocity needle like fluid stream being emitted from an orifice and impinging at a single point on the hose tube will hydraulically remove a section of it. Be sure that the hose is not bent close to a port that is orificed. In some cases where high velocities are encountered particles in the fluid can cause considerable erosion in bent sections of the hose assembly.

**19. Symptom:** The hose fitting has been pulled out of the hose. The hose has been considerably stretched out in length. This may not be a high pressure application.

**Cause:** Insufficient support of the hose. It is very necessary to support very long lengths of hose, especially if they are vertical. The weight of the hose along with the weight of the fluid inside the hose in these cases is being imposed on the hose fitting. This force can be transmitted to a wire rope or chain by clamping the hose to it much like the utilities support bundles of wire from pole to pole. Be sure to leave sufficient slack in the hose between clamps to make up for the possible 4% shortening that could take place when the hose is pressurized.

**20. Symptom:** The hose has not burst but it is leaking profusely. An examination of the bisected hose reveals that the tube has burst inwardly.

**Cause:** This type of failure is commonly referred to as hose tube blow down. It is usually associated with very low viscosity fluids such as air, nitrogen, freon and other gases. What happens is that under high pressure conditions the gases will effuse into the pores of the hose tube charging them up like miniature accumulators. If the pressure is very suddenly reduced to zero the entrapped gases literally explode out of the tube often tearing holes in it. In some hose constructions a second hose tube made from a plastic such as nylon, is inserted into the hose.

A small leak will allow the gaseous fluid to seep between the two inner liners and when pressure is reduced to zero the innermost liner will collapse because the entrapped pressure around its inner diameter.

**21. Symptom:** PTFE hose assembly has collapsed internally in one or more places.

**Cause:** One of the most common causes for this is improper handling of the PTFE assembly. PTFE is a thermoplastic material which is not rubber-like. When bent sharply it simply collapses. This type of collapse is localized in one area and is radical. When the PTFE tube is folded longitudinally in one or more places this could be the result of heat (which softens the hose) along with vacuum conditions inside of it. Because of the additional tension of the wire braid, reinforcement inherent with this type of hose, there is always a radial tension on the tube trying to push it in. Rapid cycling from a very hot agent in the hose to a very cold agent in the hose can produce the same type of failure. Eaton Aeroquip offers an internal support coil that will eliminate this problem.

**22. Symptom:** A PTFE hose assembly has developed a pin hole leak or several pin hole leaks.

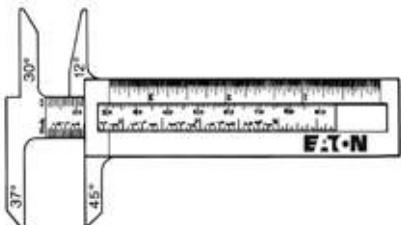

**Cause:** This situation occurs when a petroleum based fluid, with low viscosity, is flowing at high velocity. This condition can generate high voltage due to static electricity. The high voltage is seeking a ground connection and the only ground connection available is the braided stainless steel reinforcement. This causes an electric arc, which penetrates through the PTFE tube as it travels to the reinforcement. Specially constructed PTFE tubes are available that have enough carbon black in them so as to be conductive. They will "drain off" the static electricity and preclude this problem.

## Fluid connectors identification

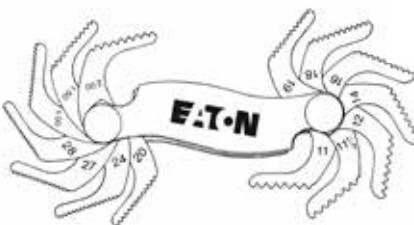

Measuring Tools: A seat angle gauge, thread pitch gauge and an I.D./O.D. caliper are necessary to make accurate measurements of commonly used connectors. Eaton offers a unique new caliper than offers the capabilities of both a caliper and a seat angle gauge in one unit.

### FT1341

#### Identification Tool Kit

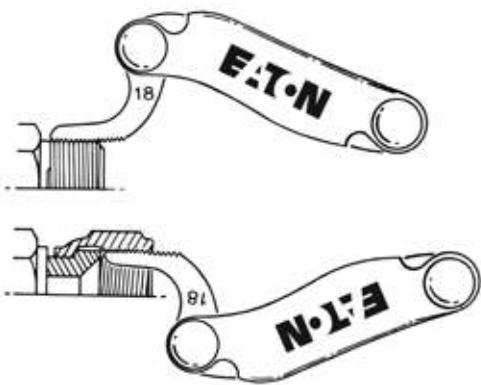

I.D./O.D. Angle gauge caliper

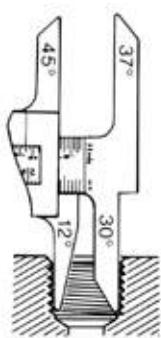

Thread pitch gauge

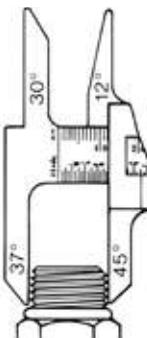

#### How to measure threads

Use a thread pitch gauge to determine the number of threads per inch or the distance between threads in metric connections. Place the gauge on the threads until the fit is snug. Match the measurement to the charts.

I.D.

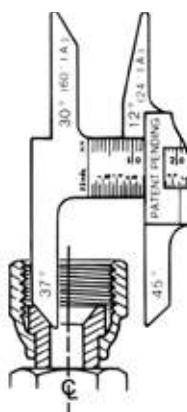

O.D.

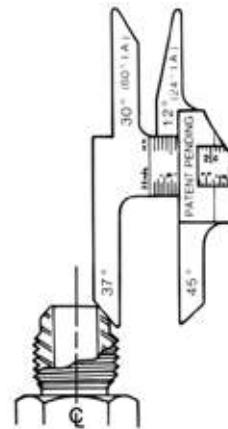

Measure the thread diameter with an I.D./O.D. caliper as shown. Match the measurements to the charts.

#### How to measure sealing surface angles

**Female** connections are usually measured by inserting the gauge into the connection and placing it on the sealing surface. If the centerlines of the connection and gauge are parallel, the correct angle has been determined.

**Male flare type** connectors are usually measured by placing the gauge on the sealing surface. If the centerlines of the connection and gauge are parallel, the correct angle has been determined.

# Fluid connectors

## Proper tube installation

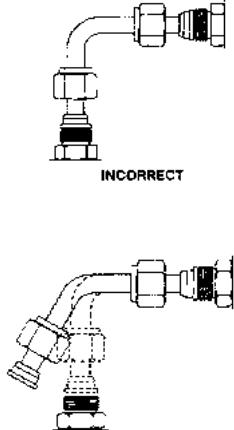

Figure 1

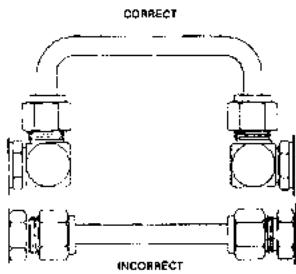

Figure 2

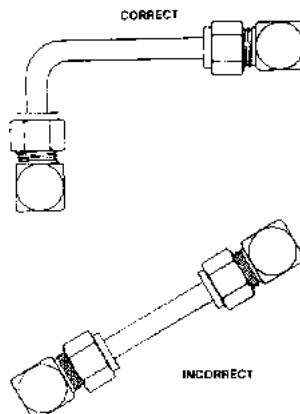

Figure 3

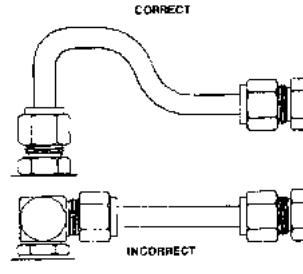

Figure 4

When compared to rigid pipe, hydraulic tubing offers the following advantages:

1. Size for size, tubing is lighter in weight, easier to handle and can be bent more easily than iron pipe.
2. Bent tubing reduces pressure drop and turbulence in the system because it eliminates sudden change in the direction of the fluid flow.
3. Hydraulic tubing reduces the number of connections required, thus reducing material and labor costs.
4. Fewer joints means lower costs and fewer points of potential leakage.
5. The use of tube fittings makes every joint a union which permits easier, faster maintenance and repair work.
6. The ORS-TF Tube Fitting eliminates the need for threading, brazing or welding.

**Tube bending**

To reduce the number of fittings in a tube assembly, bend the tubing whenever possible.

Steel tubing can be bent in many sizes by using a hand bender designed for steel tubing. For production quantities, or for larger sizes, a power bending tool is generally used.

Contact Eaton for additional tube bending information.

**Tube routing and installation**

Tubing manufacturers will advise the correct radii for various types and wall thicknesses of tubing. Kinks, flattened bends, wrinkles and tube breakage can be avoided by the use of proper tube bending equipment.

Avoid straight line connections whenever possible, especially in short runs.

Fluid conveying systems (see figures 2, 3 and 4) should be designed to follow the contour of the equipment. They are easier to install and present a neater appearance. Long runs should be supported by brackets or clamps. All heavy systems components should be bolted or clamped to eliminate tubing fatigue.

Inspect the tubing to see that it conforms to the required specifications before installation.

Tubes should align with the center line of the fittings, without distortion or tension. Tubing should not be sprung into position (see figure 1) to be assembled to the fitting. If this occurs the tubing has not been properly fabricated, and when installed and connected, places the tubing under stress.

Maximum operating pressure ratings at specified wall thickness are based upon recommended tubing ratings per SAEJ1065 as well as limited laboratory test data. Operating pressures are

based upon a 4:1 safety factor relative to tube burst data. Eaton recommends a maximum operating pressure of the joint which is the lesser of the tubing rating or the mating connector rating.

-	SAEJ525	SAEJ525	SAEJ525
-	SAEJ527	SAEJ526	SAEJ526

### Hydraulic tubing material description

SAEJ356 electric resistance welded flash controlled low carbon steel, SAEJ524 seamless annealed low carbon steel, SAEJ525 electric resistance welded

cold worked annealed, SAEJ526 single wall welded low carbon steel (automotive), SAEJ527 brazed double wall low carbon steel (automotive). The maximum hardness of the above tubing should not exceed Rockwell B65.

# Fluid connectors

Non-threaded connections, American connections

A

## How to measure non-threaded connections

### Four bolt flange

First measure the port hole diameter using the caliper. Next, measure the longest bolt hole spacing from center-to-center or measure the flange head diameter.

### Staplok

Measure the male diameter with the O.D. portion of the caliper. Measure the female half by inserting the I.D. portion of the caliper into the through hole.

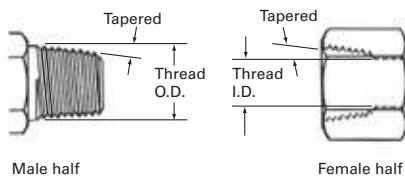

### Dash numbers

Most fluid piping system sizes in the United States are measured by dash numbers. These are universally used abbreviations for the size of the component expressed as the numerator of the fraction

with the denominator always being 16. For example, a -04 port is 4/16 or 1/4-inch. Dash numbers are usually nominal (in name only) and are abbreviations that make ordering of components easier.

## American connections

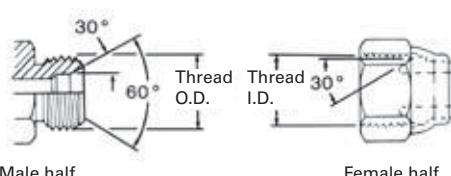

### NPTF (National pipe tapered fuel)

This connection is still widely used in fluid power systems, even though it is not recommended by the National Fluid Power Association (NFPA) for use in hydraulic

applications. The thread is tapered and the seal takes place by deformation of the threads.

### NPSM (National pipe straight mechanical)

This connection is sometimes used in fluid power systems. The female half has a straight thread and an inverted 30° seat. The male half of the connection has a straight thread and a 30° internal chamfer. The seal takes place by compression of the 30°

seat on the chamfer. The threads hold the connection mechanically.

**Note:** A properly chamfered NPTF male will also seal with the NPSM female.

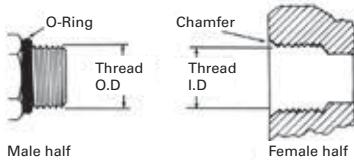

### NPTF threads

Measure thread diameter and subtract 1/4-inch to find the nominal pipe size.

Inch size	Dash size.	Nominal thread size	Male thread O.D. inch	Female thread I.D. inch	Fract.	Dec.	Frac.	Dec.

**American connections****SAE J1926 straight thread O-Ring boss (ORB)**

This port connection is recommended by the NFPA for optimum leakage control in medium and high pressure hydraulic systems. The male connector has a straight thread and an O-Ring. The female port has a straight

thread, a machined surface (minimum spotface) and a chamfer to accept the O-Ring. The seal takes place by compressing the O-Ring into the chamfer. The threads hold the connection mechanically.

**SAE J514 37° hydraulic**

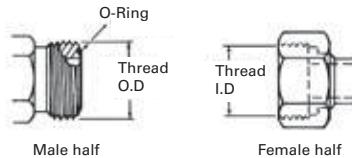

This connection is very common in fluid power systems. Both the male and female halves of the connections have 37° seats. The seal takes place by establishing a line contact between the male flare and the female cone seat.

The threads hold the connection mechanically.

**Caution:** In the -02, -03, -04, -05, -08 and -10 sizes, the threads of the SAE 45° flare and the SAE 37° flare are the same. However, the sealing surface angles are not the same.

**ORS SAE J1453 O-Ring face seal**

This connection offers the very best leakage control available today. The male connector has a straight thread and an O-Ring in the face. The female has a straight thread and a machined flat face.

The seal takes place by compressing the O-Ring onto the flat face of the female, similar to the split flange type fitting. The threads hold the connection mechanically.

# Fluid connectors

## American connections

A

### American connections

#### SAE J512 inverted

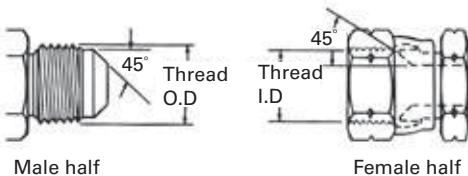

This connection is frequently used in automotive systems. The male connector can either be a 45° flare in the tube fitting form or a 42° seat in the machined adapter form.

The female has a straight thread with a 42° inverted flare. The seal takes place on the flared surfaces. The threads hold the connection mechanically.

Inch size	Dash size.	Nominal thread size	Male thread O.D. inch		Female thread I.D. inch	
			Fract.	Dec.	Fract.	Dec.

#### SAE J512 45°

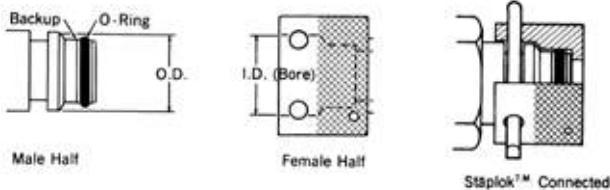

This connection is commonly used in refrigeration, automotive and truck piping systems. The connector is frequently made of brass. Both the male and female connectors have 45° seats. The seal takes place between the male flare and the female cone seat.

The threads hold the connection mechanically.

**Caution:** In the -02, -03, -04, -05, -08 and -10 sizes, the threads of the SAE 45° flare and the SAE 37° flare are the same. However, the sealing surface angles are not the same.

Inch size	Dash size	Nominal thread size	Male thread O.D. inch		Female thread I.D. inch

#### Staplok (SAE J1467)

This is a radial O-Ring seal connection developed in Germany and commonly used for hydraulic application in underground mines. The male contains an exterior O-Ring and backup ring, plus a groove to accept the "staple". The female has a smooth bore

with two holes for the stable. A "U" shaped retaining clip or staple is inserted through the two holes, passing through the groove in the male to lock the connection together. The seal takes place by contact between the O-Ring in the male and the smooth bore of the female.

## American connections

### How to measure

Four Bolt Flange—First measure the port hole diameter using the caliper.

Next, measure the longest bolt hole spacing from center-to-center (Dimension "A") or measure the flanged head diameter.

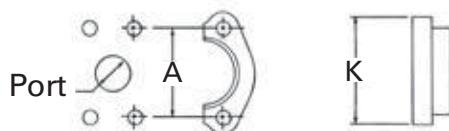

### SAE J518 4-Bolt Flange\*

This connection is commonly used in fluid power systems. There are two pressure ratings. Code 61 is referred to as the "standard" series and Code 62 is the "6000 psi" series. The design concept for both series is the same, but the bolt hole spacing and flanged head diameters are larger for the higher pressure, Code 62 connection. The female (port) is an unthreaded hole with four bolt holes in a rectangular pattern around the port. The male consists of a flanged head, grooved

for an O-Ring, and either a captive flange or split flange halves with bolt holes to match the port. The seal takes place on the O-Ring, which is compressed between the flanged head and the flat surface surrounding the port. The threaded bolts hold the connection together.

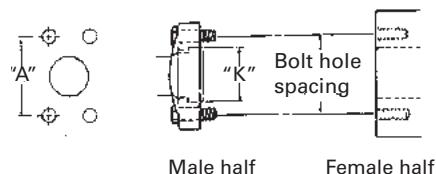

**Note:** \* SAE J518, JIS B 8363, ISO/ DIS 6162 and DIN 20066 are interchangeable, except for bolt sizes.

Inch Size (dash size)	Port hole I.D. inch fract. deci.	Bolt dimension inch		Bolt hole spacing "A" inch (dec)		Flanged head dia. "K" inch (dec)	
		Cd. 61	Cd. 62	Cd. 61	Cd. 62	Cd. 61	Cd. 62

## ISO connections

### ISO/DIS 6162 4-bolt flange\*

Male half      Female half

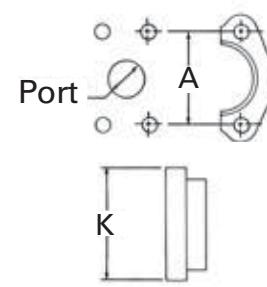

This connection is commonly used in fluid power systems. There are two pressure ratings. PN 35/350 bar (Code 61) is the "standard" series and PN 415 bar (Code 62) is the high pressure series. The design concept for both series is the same, but the bolt hole spacing and flanged head diameters are larger for the higher pressure, PN 415 bar connection. Both metric and inches bolts are used. The port will have an "M" stamped on it if metric bolts are required.

The female (port) is an unthreaded hole with four bolt holes in a rectangular pattern around the port. The male consists of a flanged head, grooved for an O-Ring, and either a captive flange or split flange halves with bolt holes to match the port. The seal takes place on the O-Ring, which is compressed between the flanged head and the flat surface surrounding the port. The threaded bolts hold the connection together.

\* ISO/DIS 6162, DIN 20066, JIS B 8363 and SAE J518 are interchangeable, except for bolt sizes.

# Fluid connectors

## German connections

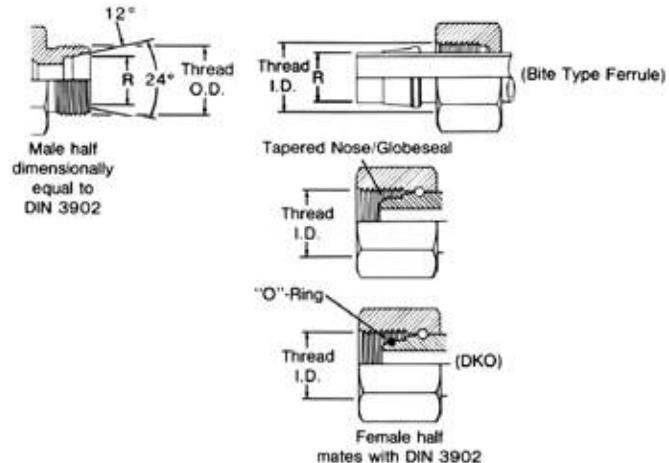

A

### German connections

#### DIN 7631 series

#### DIN 3902 series

This connection is frequently used in hydraulic systems. The male has a straight metric thread and a 60° (included angle) recessed cone. The female has a straight thread and a tapered Nose/Globeseal

seat. The seal takes place by contact between the cone of the male and the nose of the tapered Nose/Globeseal flareless swivel.

The threads hold the connection mechanically.

This connection style consists of a common male and three different female halves. The male has a straight metric thread, a 24° included angle and a recessed counterbore that matches the tube O.D. used with it. The female may

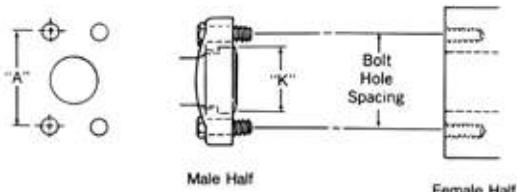

be a tube, nut and ferrule, a tapered nose/Globeseal flareless swivel or a tapered Nose/Globeseal flareless swivel with an O-Ring in the Nose (DKO type).

\*I.Rh. is a light duty system.

<sup>t</sup>s.Rh. is a heavy duty system.

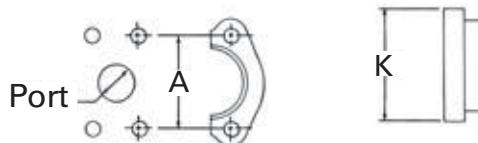

**German connections****DIN 20066 4-bolt flange\***

This connection is commonly used in fluid power systems. There are two pressure ratings. Form R (Code 61) is referred to as the "standard duty" series and Form S (Code 62) is the "heavy duty" series. The design concept for both series is the same, but the bolt hole spacing and flanged head diameters are larger for the higher pressure, Form S connection. Both metric and inch bolts are used. The female (port) is an unthreaded hole with four bolt holes in a rectangular pattern around the port. The male

consists of a flanged head, grooved for an O-Ring, and either a captive flange or split flange halves with bolt holes to match the port. The seal takes place on the O-Ring, which is compressed between the flanged head and the flat surface surrounding the port. The threaded bolts hold the connection together.

**Note:** \*DIN 20066, IS/DIS 6166, JIS B 8363 and SAE J518 are interchangeable, except for bolt sizes.

**British connections****British standard pipe(BSP)**

This BSPT (tapered) connection is similar to the NPT, except that the thread pitches are different in most sizes, and the thread

form and O.D.s are close but not the same. Sealing is accomplished by thread distortion. A thread sealant is recommended.

The BSP (parallel) male is similar to the NPSM male except the thread pitches are different in most sizes.

The female swivel BSPP has a tapered nose/Globeseal flareless swivel which seals on the cone seat of the male.

**BSPT/BSPP threads**

Inch size	Dash size	Nominal thread size	Male thread O.D. inch		Female thread I.D. inch	
			mm	mm	fraction	decimal
1/8	02	1/8-28	3/8	0.38	11/32	0.35
1/4	04	1/4-19	33/64	0.52	15/32	0.47
3/8	06	3/8-19	21/32	0.65	19/32	0.60
1/2	08	1/2-14	13/16	0.82	3/4	0.75
5/8	10	5/8-14	7/8	0.88	13/16	0.80
3/4	12	3/4-14	1 1/32	1.04	31/32	0.97
1	16	1-11	1 5/16	1.30	1 7/32	1.22
1 1/4	20	1 1/4-11	1 21/32	1.65	1 9/16	1.56
1 1/2	24	1 1/2-11	1 7/8	1.88	1 25/32	1.79
2	32	2-11	2 11/32	2.35	2 1/4	2.26

\*Frequently, the thread size is expressed as a fractional dimension preceded by the letter "G" or the letter "R". The "G" represents a parallel thread and the "R" indicates a tapered thread. For example, BSPP 3/8-19 may be expressed as G 3/8, and BSPT 3/8-19 may be expressed as R3/8.

# Fluid connectors

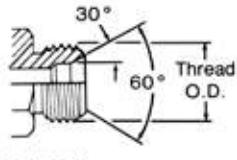

## Japanese connections

A

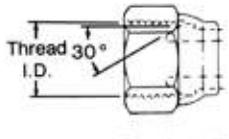

### Japanese connections

#### JIS 30° male inverted seat, parallel pipe threads

(Threads per JIS B 0202)

Male Half

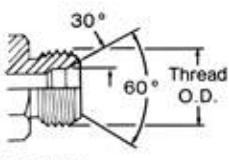

Female Half

The JIS parallel is similar to the BSPP connection. The JIS parallel thread and

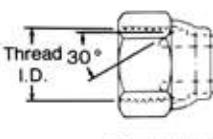

the BSPP connection are interchangeable.

#### JIS 30° male inverted seat, parallel pipe threads

(Threads per JIS B 0207)

Male Half

Female Half

The JIS parallel (metric) is the same as the JIS parallel

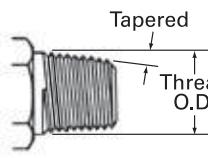

(PF), except for the thread difference.

Inch size	Dash size	Nominal thread size (similar to bspp)	Male thread O.D.		Female thread O.D.	
mm	mm		fract.	dec.	fract.	dec.

# Fluid connector

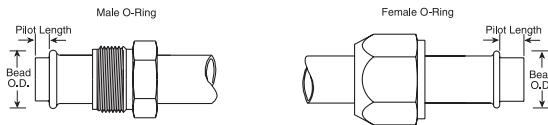

## O-Ring pilot thread sizes

A

This connection is common to air conditioning systems, both in vehicle and commercial applications. Both the male and female halves of the connections have a pilot, either long or short. The seal takes place by compressing an O-ring adjacent to the bead of the tube. The threads hold the connection together mechanically.

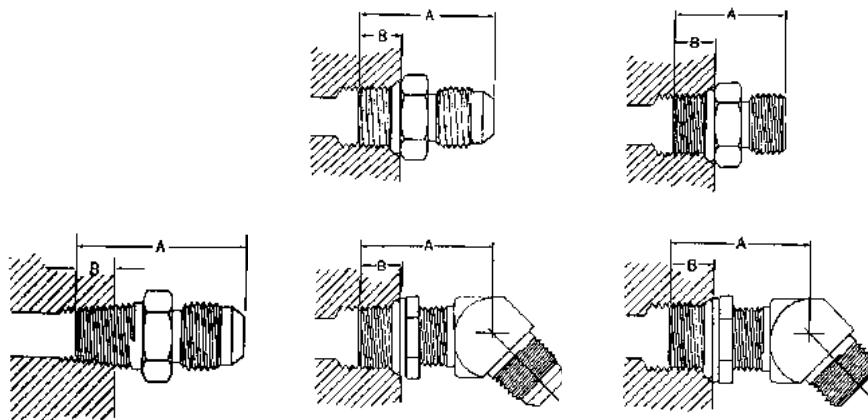

Inch size	Dash size	Male thread			Female thread		
		O.D. (inch) nominal thread	O.D. (inch) fraction	O.D. (inch) decimal	I.D. (inch) nominal thread	I.D. (inch) fraction	I.D. (inch) decimal

## Thread engagement

Dimensions may vary due to tolerance conditions. Listed below are the thread engagement dimensions (B) which must be taken into consideration when making connection with ports or appropriate female adapters. The "B" dimension must be subtracted from the overall length (A) to insure proper connection.

# Fluid connectors

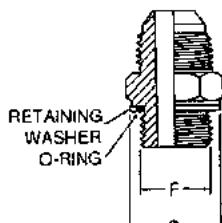

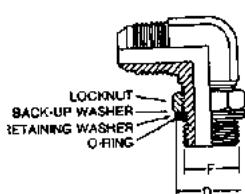

Metric thread dimensions, Conversion adapters

A

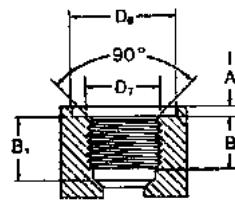

## Metric thread dimensions

### Conversion adapters

Sealing is achieved by means of an O-Ring, retaining washer and a properly machined port. The O-Ring is "captured" by the I.D. of the retaining washer. The port may be of the spot faced or a flat machined surface as long as the D6 dimension is met. Assembly instructions for adjustable type adapters are found at Lifesaver Fittings E-SROV-TS008-E.

## BSPP (parallel) threads

Sealing is achieved by means of an O-Ring, retaining washer and a properly machined port. The O-Ring is "captured" by the I.D. of the retaining washer. The compression is controlled by the thickness of the retaining washer.

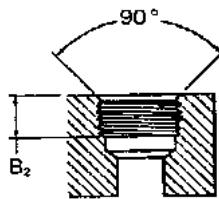

The port may be of the spot faced or a flat machined surface as long as the D6 dimension is met.

The port may be of the spot faced or a flat machined surface as long as the D6 dimension is met.

correct Mpa unit when the pressure is higher than 250 psi. All operating pressures of SAE J517 hoses are above 250 psi except for most of 100R4 and the

76mm (-48) and larger sizes of 100R5. Therefore all files of previous test results should not be compromised

# Assembly instructions

## Assembly torque

A

### Recommended parallel connection assembly torque

Eaton recommends that a torque wrench be used to assure proper fitting assembly of these connections.

#### Straight thread O-Ring boss low pressure with 37° (SAE514)

Dash size	Thread size (inches)	Jam nut or straight fitting torque lb.-ft.	Jam nut or straight fitting torque newton meters
-03	3/8-24	8-9	12-13
-04	7/16-20	13-15	18-20
-05	1/2-20	14-15	19-21
-06	9/16-18	23-24	32-33
-08	3/4-16	40-43	55-57
-10	7/8-14	43-48	59-64
-12	1 1/16-12	68-75	93-101
-14	1 3/16-12	83-90	113-122
-16	1 5/16-12	112-123	152-166
-20	1 5/8-12	146-161	198-218
-24	1 7/8-12	154-170	209-230
-32	2 1/2-12	218-240	296-325

The values listed are for steel connections. Contact Eaton for torque values for other materials.

#### Straight thread O-Ring boss high pressure with ORS (J1453)

Dash size	Thread size (inches)	Jam nut or straight fitting torque lb.-ft.	Jam nut or straight fitting torque newton meters
-03	3/8-24	8-10	11-13

#### Metric

Thread size	Straight adapter or locknut torque	
mm	lb.-ft.	Newton meters
M10 x 1	13-15	18-20
M12 x 1.5	15-19	20-25
M14 x 1.5	19-23	25-30
M16 x 1.5	33-40	45-55
M18 x 1.5	37-44	50-60
M20 x 1.5	52-66	70-90
M22 x 1.5	55-70	75-95
M26 x 1.5	81-96	110-130
M27 x 2	96-111	130-150
M33 x 2	162-184	220-250
M42 x 2	170-192	230-260
M48 x 2	258-347	350-470

#### BSPP

Nominal thread size	Straight adapter or locknut torque	
inches**	lb.-ft.	Newton meters
G 1/8-28	13-15	18-20
G 1/4-19	19-23	25-30
G 3/8-19	33-40	45-55
G 1/2-14	55-70	75-95
G 3/4-14	103-118	140-160
G 1-11	162-184	220-250
G 1 1/4-11	170-192	230-260
G 1 1/2-11	258-347	350-470

\*\*\*"G" denotes parallel threads, other than ISO 6149. (Port connection only)

## Assembly instruction tips

### Terms

- Skive—Removal of the cover material exposing the reinforcement prior to fitting assembly.
- Dash Size—The hose or fitting size expressed in 1/16 of an inch. The numerator of a fraction whose denominator is 16. Example: -8 or -08 is 8/16" = 1/2".
- Nipple—The part of a hose fitting that goes into the hose tube.
- Socket—The part of a hose fitting that goes over the hose cover or reinforcement.
- Mandrel—A round, properly sized, steel bar used for support during assembly of the fitting or skiving the hose cover.
- Annular Rings—A series of concentric rings inside the socket.

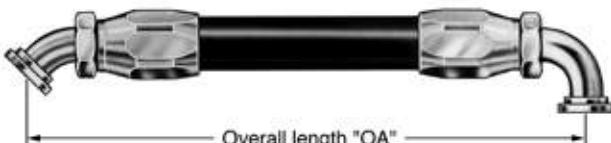

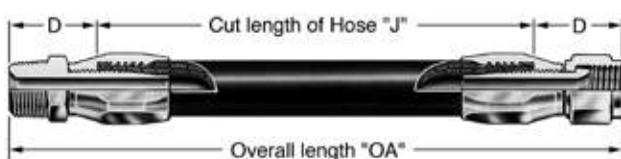

### Reusable fitting tips to remember for easy assembly

- Part numbers and dash sizes are indicated on fitting sockets.
- It is essential the fitting be mated with a compatible hose style with the same dash size.
- Reusable fittings that have a notch in the socket serve as a reference for the cover skiving length.
- Familiarize yourself with the assembly instructions before you start to make an assembly.
- For hoses that require skiving, be sure to skive the hose to the proper length and down to the wire reinforcement.
- Use Aeroquip 222070 hose assembly lube liberally on both the inside of the hose and on the fitting nipple. (Check for compatibility.)
- Always cut hose square by using a sharp instrument (hacksaw or cutoff wheel).
- For volume production of hose assemblies, use Eaton Assembly Equipment.

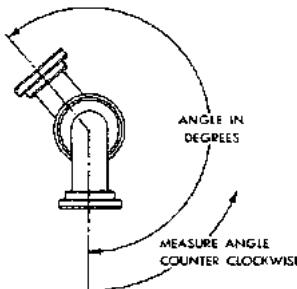

### Cutting the hose

1. To determine the "J" length (cut length of hose) from "OA" (overall length) deduct "D" dimensions of both end fittings. Consult fitting information pages for "D" dimensions. For hose assemblies with SOCKETLESS® fittings, add 1/2" to "J" length.  
Tip: If the old Aeroquip® assembly was the right length, simply remove the hose fittings and measure the hose.
2. Cut the hose square. Use a cut-off wheel or fine-tooth hacksaw.
3. Clean the hose bore.

### Phase angle (offset)

When making double elbow assemblies, the following steps should be followed to obtain the desired angle between elbows. Tighten both elbows to maximum allowable gap between socket and nipple hex. Start to position for relative angle between elbows. Finish assembly by adjusting both elbows. Backing off to get desired angle should be avoided.

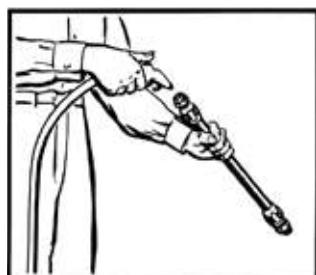

# Assembly instructions

## Maintenance

A

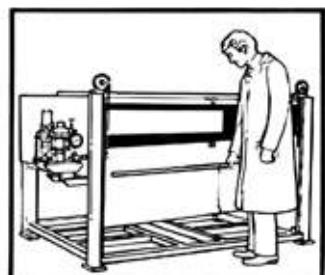

### Cleaning, inspection, testing and storage

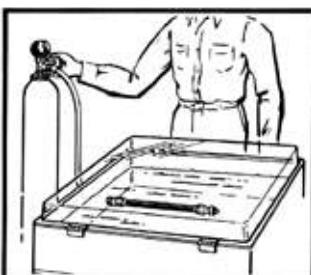

Clean

Inspect

Proof test - hydrostatic

Proof test - pneumatic

#### Maintenance

Hose assemblies in operation should be inspected frequently for leakage, kinking, abrasion, corrosion or any other signs of wear or damage. Worn or damaged hose assemblies should be replaced immediately.

#### Clean

At minimum a hose assembly should be blown out with clean compressed air. Eaton recommends using the Jetcleaner Hose Cleaning System (FT1355).

Assemblies may be rinsed out with mineral spirits if the tube stock is compatible with oil, otherwise hot water at +150°F max. may be used. Consult Eaton for special cleaning equipment.

#### Inspect

Examine hose assembly internally for cut or bulged tube, obstructions, and cleanliness. For segment style fittings, be sure that the hose butts up against the nipple shoulder; band and retaining ring are properly set and tight, and segments are properly spaced. Check for proper gap between nut and socket or hex and socket. Nuts should swivel freely. Cap the ends of the hose with plastic covers to keep clean.

#### Proof test - hydrostatic

The hose assembly should be hydrostatically tested at twice the recommended working pressure of the hose.

Test pressure should be held for not more than one minute and not less than 30 seconds. When test pressure is reached, visually inspect hose assembly for: a) Any leaks or signs of weakness. b) Any movement of the hose fitting in relation to the hose. Any of these defects are cause for rejection.

(See Assembly Equipment Section for Eaton Proof Test Stands.)

#### Proof test - pneumatic

Hose assemblies intended for gas or air service should be tested with air or nitrogen at 100 psi with the assembly immersed in water. Random bubbles may appear over the hose and fitting area when assembly is first pressurized. This should not be construed as a defect. However, if the bubbles persist in forming at a steady rate at any particular point on the hose, the assembly should be rejected.

Caution: Testing should be conducted in approved test stands with adequate guards to protect the operator.

#### Storage and handling

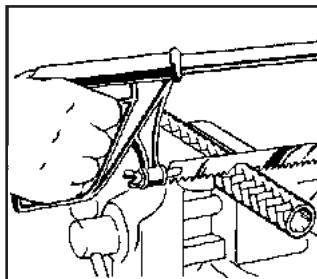

Hose should be stored in a dark, dry atmosphere away from electrical equipment, and the temperature should not exceed +90°F. Storage in the original shipping container is preferred.

**Hose and reusable fittings**

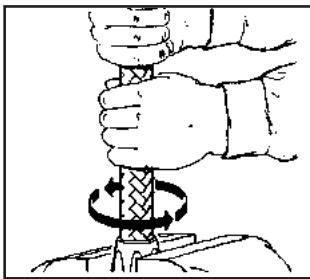

**Standard (mandrelless) reusable fittings with single wire braid, multiple textile braid, hydraulic and LPG hose.**

**FC234, FC300, FC321, FC350, FC355, 1503, 2580, 2651**

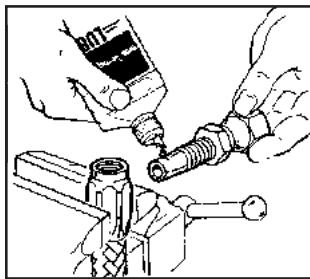

(for fittings requiring mandrel, see page A-58)

**Step 1**

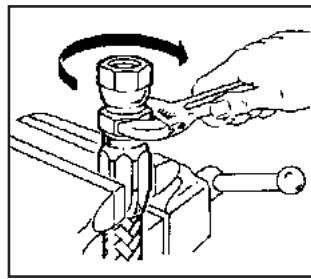

Cut hose square with finetooth hacksaw or cut-off wheel.

**Step 2**

Put socket in vise.  
Screw hose counterclockwise into socket until it bottoms.  
Back off 1/4 turn.  
  
When assembling long lengths of hose, it may be preferred to put hose in vise just tight enough to prevent from turning, and screw socket into the hose counterclockwise until it bottoms.  
Back off 1/4 turn.  
Back off FC300, FC350 and FC355 1/4 to 1/2 turn.

**Step 3**

Lubricate nipple and threads LIBERALLY. Use heavy oil or Aeroquip® 222070 hose assembly lube.

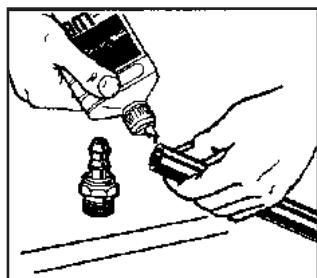

**Step 4**

Screw nipple clockwise into socket and hose. Leave 1/32" to 1/16" clearance between nipple hex and socket.

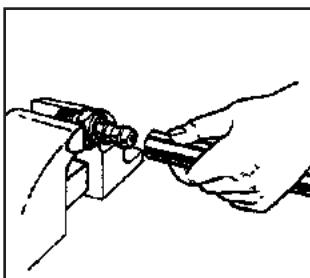

Recommendations for cleaning, inspection and testing are summarized on page A-52. Disassemble in reverse order.

**SOCKETLESS® fittings with textile braid low pressure hose**

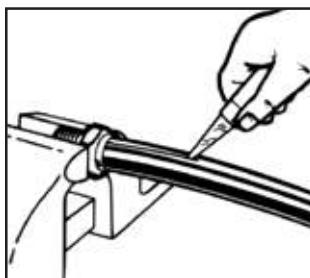

**FC332, FC647, 2556, 2565, 2575**

**Step 1 to Assemble**

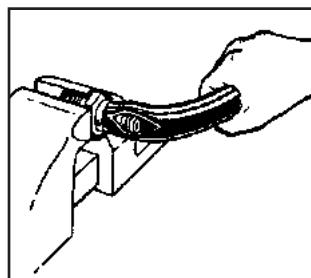

Cut hose to required length with a sharp knife. Oil inside of hose and outside of nipple liberally.

**Step 2**

Push hose on fitting until hose end bottoms underneath protective cap as shown. For quantity production use a SOCKETLESS Fitting assembly machine.  
Recommendations for cleaning, inspection and testing are summarized on page A-52.

**Step 1 to disassemble**

Slit hose lengthwise from protective cap to end of nipple.

**Step 2**

Bend hose, then snap hose off with a quick tug.

# A Assembly instructions

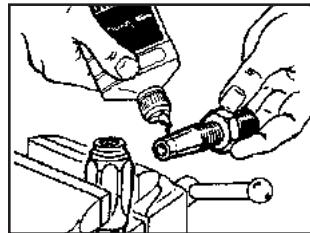

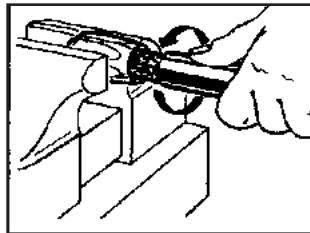

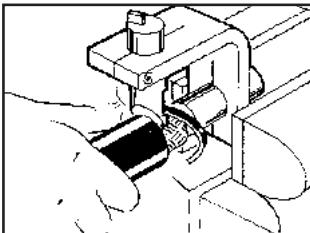

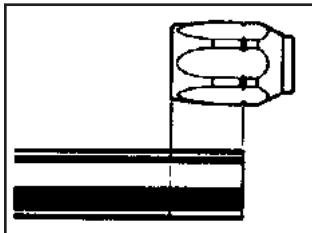

## Hose and reusable fittings

A

### Hose and reusable fittings

#### Standard reusable fittings with Hi-Pac and two wire braid hose

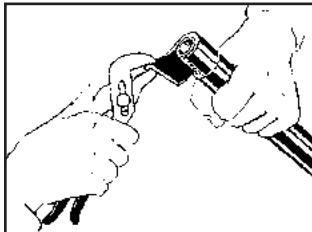

FC310, FC510, 2781

#### Step 1

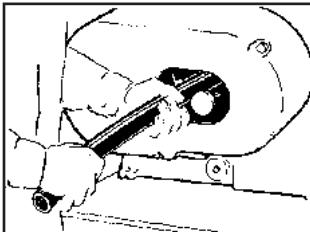

Cut hose to length required using a fine-tooth hacksaw or cut-off wheel. Clean hose bore.

Hose must be stripped of its rubber cover before inserting in socket. Locate skiving point by putting hose end next to socket as shown. Measure from hose end of socket to notch on socket.

#### Skive Tool

Use the correct size FT1229 hose cover skiving tool. Mount the tool in a vise. Push the hose over the mandrel. Rotate the hose clockwise until it bottoms or secure hose in a vise and attach FT1279 auger to the skive tool. Insert mandrel into the hose and rotate clockwise until it bottoms.

#### Step 2

Put socket in vise.

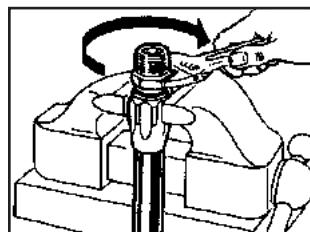

Screw hose into socket counterclockwise until it bottoms.

When assembling long lengths of hose, it may be preferred to put hose in vise just tight enough to prevent from turning, and screw socket onto the hose counterclockwise until it bottoms.

**Note:** Sockets for hose fittings in the -16, -24 and -32 sizes are furnished with internal annular grooves in place of helical grooves (all FC310 and FC510 hose sockets are annular grooved). Install socket by pushing hose into socket with a back and forth rocking and twisting motion until hose bottoms on shoulder of socket.

#### Step 3

Lubricate nipple threads and inside of hose liberally. Use heavy oil or Eaton 222070 hose assembly lube.

#### Step 1A

##### Skive Hose

By Hand: Cut rubber cover around down to wire reinforcement. Slit lengthwise. Raise flap and pull off with pliers. Clean excess rubber off wire reinforcement with wire brush or soft wire wheel. Do not fray or flare wire reinforcement when brushing.

#### Machine

Use the S1102 cut-off and skiving machine. Consult the owners manual. Select the correct mandrel. Turn on the machine. Put the hose over the mandrel and rotate.

**Note:** When skiving, remove the rubber cover until the wire reinforcement is exposed around the circumference of the hose.

#### Step 4

Screw nipple clockwise into socket and hose.

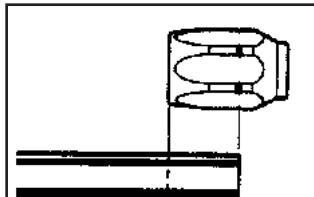

Leave 1/32" to 1/16" clearance between nipple hex and socket.

Recommendations for cleaning, inspection and testing are summarized on page A-52. Disassemble in reverse order.

## Hose and reusable fittings

### Standard reusable fittings with four spiral wire hose

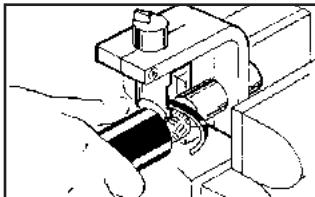

GH493, FC736

#### Step 1

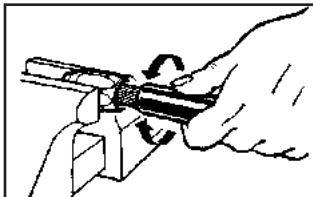

Cut hose to length required using a fine-tooth hacksaw or cut-off wheel. Clean hose bore.

Hose must be stripped of its rubber cover before inserting into socket. Locate skiving point by putting hose end next to socket as shown. Measure from hose end of socket to notch on socket.

#### Skive Tool

Use the correct size Eaton FT1229 hose cover skiving tool. Mount the tool in a vise. Push the hose over the mandrel. Rotate the hose clockwise until it bottoms or secure hose in a vise and attach FT1279 auger to the skive tool. Insert mandrel into the hose and rotate clockwise until it bottoms.

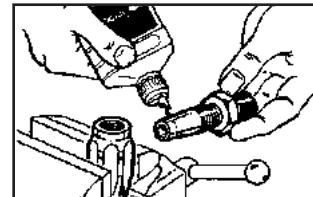

#### Step 2

Sockets for hose fittings are furnished with internal annular grooved design. Install socket by pushing hose into socket with a back and forth rocking and clockwise twisting motion until hose bottoms on shoulder of socket.

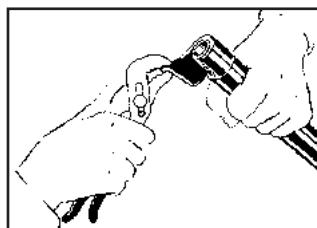

An alternate method is to insert the hose in a vise. Install socket by pushing onto the hose with a back and forth rocking and clockwise twisting motion until the hose bottoms on the shoulder of socket.

A rawhide hammer or similar tool may be used to tap the socket onto the hose but avoid damage to internal socket threads. Be sure not to damage hose cover or wire reinforcement.

#### Step 3

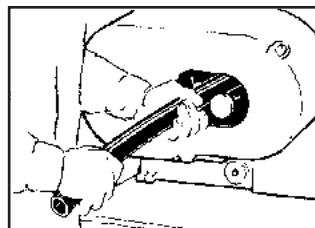

Liberally lubricate nipple threads and inside of hose. Use heavy weight oil or Aeroquip® 222070 hose assembly lube.

#### Step 1A

##### Skive hose by hand

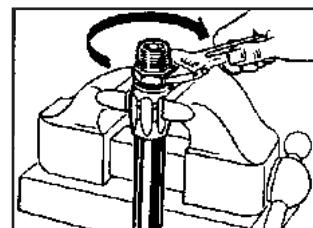

Cut rubber cover around down to wire reinforcement with a knife. Slit lengthwise. Raise flap and pull off with pliers. Clean excess rubber off wire reinforcement with wire brush or soft wire wheel. Do not fray or flare wire reinforcement when brushing.

##### Machine

Use the Eaton S1102 cut-off and skiving machine. Consult the owners manual. Select the correct mandrel. Turn on the machine. Put the hose over the mandrel and rotate counterclockwise.

**Note:** when skiving, remove the rubber cover until the wire reinforcement is exposed around the circumference of the hose.

#### Step 4

Screw nipple clockwise into socket and hose. Leave a  $1/32"$  to  $1/16"$  clearance between nipple hex and socket.

Recommendations for cleaning, inspection and testing are summarized on page A-52. Disassemble in reverse order.

# A Assembly instructions

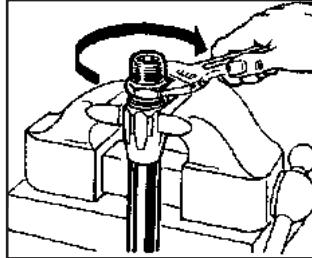

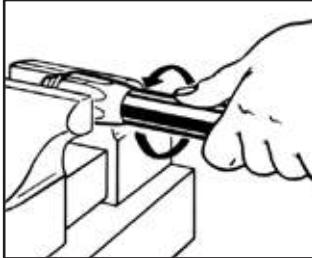

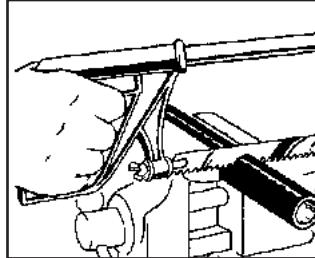

## Hose and reusable fittings

A

### Hose and reusable fittings

#### Thru-the-cover style reusable fittings with hose

GH663, GH793

#### Step 1

Cut hose to length required using a fine tooth hacksaw or cut-off machine. Clean hose bore.

#### Step 2

Liberally lubricate hose cover with Aeroquip® 222070 hose assembly lube.

Place socket in vise and turn hose into socket counterclockwise until it bottoms.

When assembling long lengths of hose, it may be preferred to put hose in vise just tight enough to

prevent from turning, and screw socket onto the hose counterclockwise until it bottoms.

#### Step 3

Liberally lubricate nipple threads and inside of hose. Use heavy weight oil or Aeroquip® 222070 hose assembly lube.

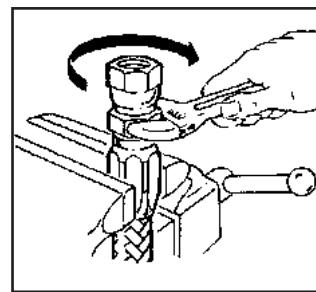

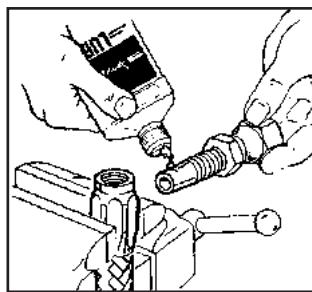

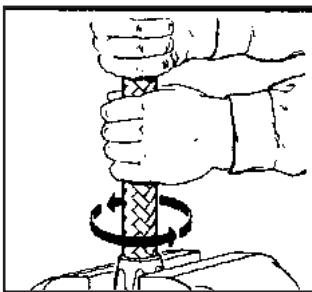

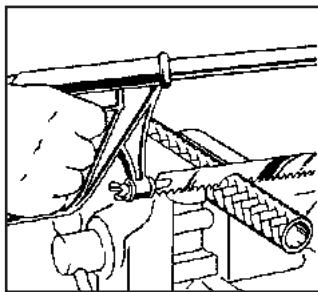

#### Step 4

Screw nipple clockwise into socket and hose. Leave 1/32" to 1/16" clearance between nipple hex and socket.

Recommendations for cleaning, inspection and testing are summarized on page A-52. Disassemble in reverse order.

#### Standard (mandrelless) reusable fittings with engine, air brake and railroad air brake hose

1531, 1531A, 2550, 2554, 2570 (for fittings requiring mandrel, see page A-58)

#### Step 1

Cut hose square to length required with fine-tooth hacksaw or cut-off wheel. Clean hose bore.

#### Step 2

Put socket in vise. Screw hose counterclockwise into socket until hose bottoms. Back off 1/4 turn.

When assembling long lengths of hose, it may be preferred to put hose in vise just tight enough to prevent from turning, and screw socket into the hose counterclockwise until it bottoms. Back off 1/4 turn.

**Note:** For 2550, 2554 and 2570 hose: Sockets for these hose fittings are furnished with internal annular grooved design. Install

socket by pushing hose into socket with a back and forth rocking and twisting motion until hose bottoms on shoulder of socket. Back off 1/4 turn.

#### Step 3

Lubricate nipple threads and inside of hose liberally with Aeroquip® 222070 hose assembly lube or heavy weight oil.

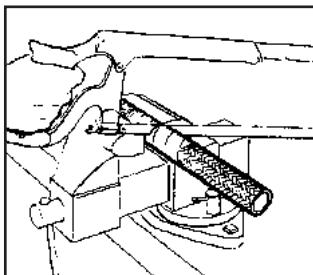

#### Step 4

Screw nipple clockwise into socket and hose. Leave a 1/32" to 1/16" clearance between nipple hex and socket.

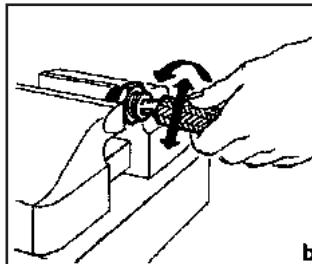

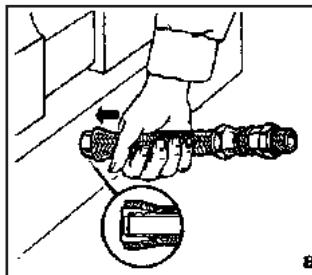

Recommendations for cleaning, inspection and testing are summarized on page A-52. Disassemble in reverse order.

**Hose and reusable fittings****"Super Gem"® fittings with PTFE hose**

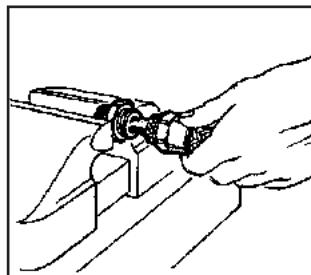

FC465, 2807, 2808

**Step 1**

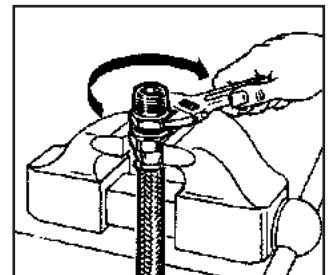

Wrap hose with masking tape at cut-off point and cut square to length through taped area using a cut-off machine or fine-tooth hacksaw. Remove tape and trim any loose wires flush with tube stock. Any burrs on the bore of the tube stock should be removed with a knife. Clean the hose bore. Sometimes wire braid will tend to "neck down" on one end and flare out, on the opposite end. This is a characteristic of wire braid hose and can be used to an advantage in the assembly of the "super gem" sockets. Slip two sockets back to back over the "necked down" end of the hose.

**Step 2**

- Push the sleeve over the end of the tube and under the wire braid by hand. Complete positioning of the sleeve by pushing the hose end against a flat surface. Visually inspect to see that tube stock butts against the inside shoulder of the sleeve.
- Set the sleeve barbs into the PTFE tube by using assembly tool FT1038A or working the hose bore over the nipple into the end of the sleeve and tube. Assembly kit FT1081 is also available.

**Step 3**

Lubricate nipple and socket threads. For stainless steel fittings, use a molydisulfide base lubricant (e.g., Molykote® Type G), lubricants containing chloride are not recommended. Other material combinations use standard petroleum lubricants. Hold the nipple with hex in vise. Push hose over nipple with twisting motion until seated against nipple chamfer. Push socket forward and hand start threading of socket to nipple.

**Step 4**

Wrench tighten nipple hex until clearance with socket hex is  $1/32"$  or less. Tighten further to align corners of nipple and socket hexes. Recommendations for cleaning, inspection and testing are summarized on page A-52.

To disassemble: Unscrew and remove nipple; slide socket back on hose by tapping against flat surface; remove sleeve with pliers. New sleeves are recommended upon reuse of the fitting.

\*Molykote Type G is a registered trademark of the Dow Corning Corporation.

# A Assembly instructions

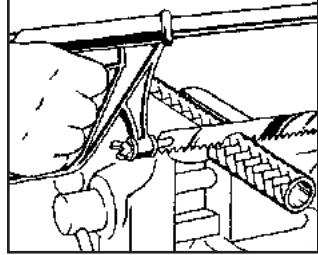

## Hose and reusable fittings

A

### Hose and reusable fittings

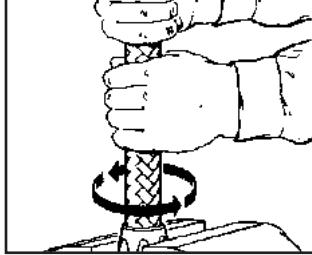

**Mandrel type fittings— standard reusable fittings with single wire braid, multiple textile braid, hydraulic, LPG hose, engine and air brake hose**

FC234, FC300, FC321, FC350, FC355, 1503, 2580, 2651

#### Step 1

Cut hose square to length required with fine-tooth hacksaw or cut-off wheel. Clean hose bore.

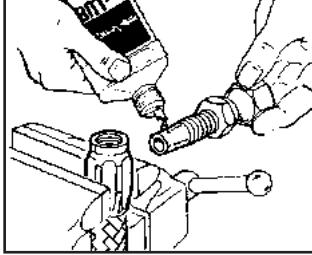

#### Step 2

Put socket in vise. Screw hose counter-clockwise into socket until hose bottoms. Back off 1/4 turn.

When assembling long lengths of hose, it may be preferred to put hose in vise just tight enough to prevent from turning, and screw socket into the hose counter-clockwise until it bottoms. Back off 1/4 turn.

Back off FC300, FC350 and FC355 hose 1/4 to 1/2 turn.

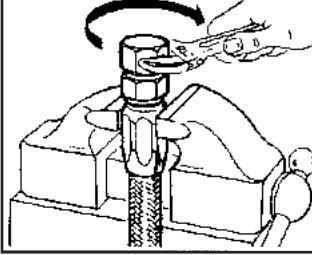

#### Step 3

MALE ENDS: Push assembly tool into nipple.

SWIVEL ENDS: Tighten nipple and nut on assembly tool.

Lubricate nipple, mandrel and inside of hose liberally. Use heavy oil or Eaton 222070 hose assembly lube.

#### Step 4

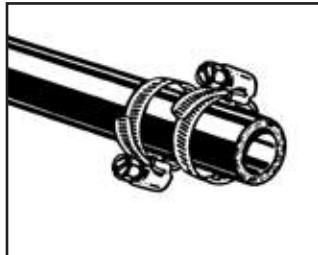

MALE ENDS: Screw nipple clockwise into socket and hose. Leave a 1/32" to 1/16" clearance between nipple hex and socket.

SWIVEL ENDS: Screw nipple clockwise into socket and hose. Leave 1/32" to 1/16" clearance between nut and socket.

Recommendations for cleaning, inspection and testing are summarized on page A-52. Disassemble in reverse order.

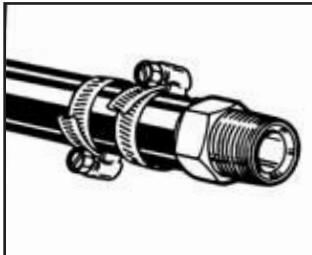

### Nipple and clamp with suction hose

2661, FC619

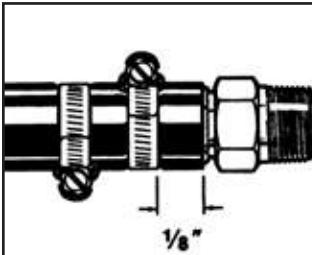

#### Step 1

Cut hose square to length required using a fine-tooth hacksaw or cut-off wheel. Clean hose bore. Slide band clamp over hose cover.

#### Step 2

Insert nipple into hose until hose end bottoms on nipple shoulder.

#### Step 3

Evenly space two band clamps from end of hose to end of nipple (see above). The band clamps should be tightened 180° from each other. Tighten clamps to 100 in-lbs. Recommendations for cleaning, inspection and testing are summarized on page A-52.

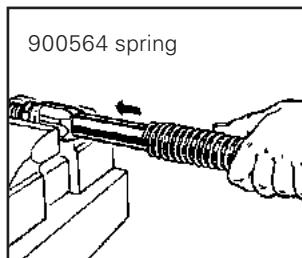

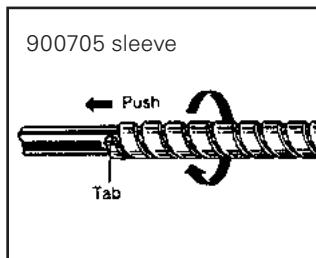

## Accessories

### Steel protective coil sleeve

**900705**

### Steel protective coil spring

**900564**

#### Step 1

Follow the appropriate assembly instructions through the assembly of one end fitting. Insert one end fitting in vise.

#### Step 2

Cut coil length. Coil should be cut to overall assembly length "OA" minus the sum of the overall length of each end fitting. ("A" dimension).

#### Step 3

##### 3a) 900705 Steel Protective Coil Sleeve

The hose and the coil should be held straight. Taping or capping the hose end can prevent frayed wire ends from snagging on the coil. Bend one end to the coil outward to form a slight tab to assist grasping. (Cut off or bend back when installation is complete.) Hold the tab with the

thumb of one hand while twisting the coil clockwise approximately one foot back from the coil tab. When the coil opens up sufficiently, slip the tab end to the coil over the hose. Move the coil onto the hose by pulling at the tab end while pushing with the other hand. Be careful not to exceed the resiliency of the coil by stretching it too far.

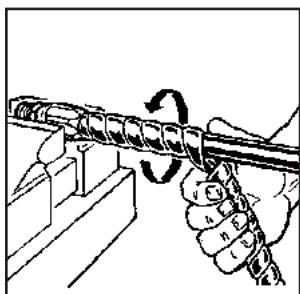

3b) 900564 Steel Protective Coil Spring  
Slide coil over hose.

#### Step 4

Proceed with assembly of second end fitting.

### Plastic coil sleeve

**900952**

#### Step 1

Follow the appropriate hose assembly instructions through the assembly of both end fittings. Insert end fitting in vise.

#### Step 2

Cut coil length. Coil should be cut to overall assembly length "OA" minus the sum of the overall length of each end fitting. ("A" dimension).

#### Step 3

Wrap the coil on the hose.

# Assembly instruction

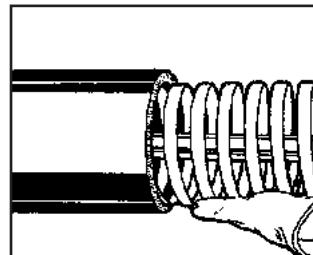

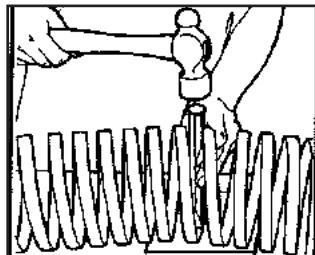

## Accessories

A

### Accessories

#### Internal support coils

222005, 222022

#### Step 1

Cut coil length. The coils should be cut to the hose length, minus the nipple intrusion. For any given hose assembly the support coil length equals the overall hose assembly length minus the sum of the overall lengths of each end fitting. ("A" dimensions.)

Small size of the coil can usually be cut with strap cutters or sheet metal shears. The larger sizes are best cut with a heavy sharp chisel or bolt cutter. With small sizes skip directly to Step 3.

#### Step 2

Compress the coil (large sizes only). It is necessary to reduce the coil diameter slightly in order to insert it into the hose. The easiest approach is to use a length of pipe with a notch cut in one end. Clamp the plain end of the pipe in a vise, slide the coil over the pipe and insert the free end of the coil into the notched end of the pipe. Then clamp the coil and pipe firmly together. Twist the coil to compress it prior to installation into the hose.

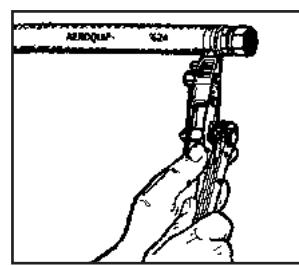

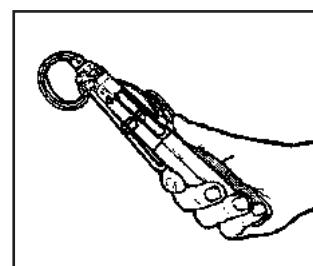

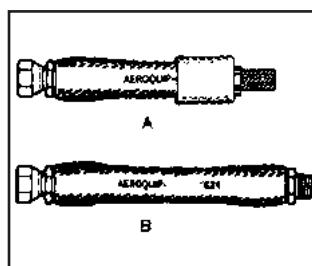

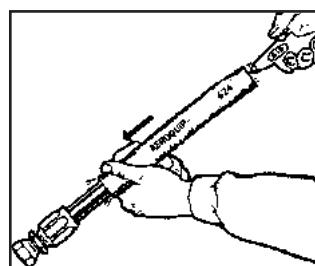

#### Step 3

**Small sizes:** The coil can be worked into the hose by hand without difficulty. Remove all burrs from the coil prior to insertion. This will prevent cutting of the hose tube. Position the coil midway between hose ends.

**Large sizes:** With the pipe still in position, as in Step 2, assemble the hose over the coil. With the coil fully centered in the hose, remove the pipe and clamp.

#### Firesleeve

624

#### Step 1

Follow the appropriate hose assembly instructions through the assembly of one end fitting. Cut firesleeve to same length as hose; using Firesleeve End Dip (AE13702-003) dip ends of firesleeve to a depth of three quarters of an inch and allow to dry at room temperature.

Start firesleeve over cut end of hose.

**Notes:** If applying sleeve over PTFE or stripped cover assemblies, wrap exposed wire with tape. Grasp sleeve and slip over the hose assembly as illustrated.

#### Step 2

Skin sleeve back from cut end of hose enough to allow assembly of second end fitting. (2A)

Then center sleeve so that it completely covers both sockets. (2B)

#### Step 3

Insert tail of band clamp into hand clamping tool.

#### Step 4

Position band clamp over sleeve as shown and then draw tight with hand tool. Remove tool and cut free end of band clamp. Repeat on other end of assembly. To complete, bend protruding tail of clamp over clamp buckle. Also repair any scuffing or minor abrasions of firesleeve by brush application of End Dip AE13702-003.

\*\*Two braids of high tensile wire.

### Construction

**Tube:** Synthetic rubber

**Reinforcement:** One or two layers of braided wire

**Cover:** Synthetic rubber intermediate cover and BRUISER™ outer cover

### Operating parameters

-40°C to +100°C  
(-40°F to +212°F)

### Application

- High abrasion industrial and hydraulic system applications with petroleum and water-based fluids
- Recommended for use on critical applications in construction, forestry, and other off-highway vehicles. BRUISER™ outer cover offers unmatched abrasion, chemical, and environmental protection

For more information on agency listings, specific fluid applications and high temperature ratings see section A.

#### Construction

**Tube:** Synthetic rubber

**Reinforcement:** 4-spiral wire

**Cover:** DURA-TUFF™  
synthetic rubber

#### Operating parameters

-40°C to +127°C  
(-40°F to +260°F)

#### Application

- Hydraulic system service with petroleum and water-based fluids
- General industrial use

For more information on agency listings, specific fluid applications and high temperature ratings see section A.

SAE100R7 does not apply to 0.125" size. The nylon core tube is a single wall and not bonded to the reinforcement.

## Construction

- Tube:** Nylon-lined
- Reinforcement:** Spiral or braided synthetic fiber
- Cover:** Black perforated polyurethane

## Operating parameters

- 40°C to +100°C  
(-40°F to +212°F) or
- 40°C to +66°C  
(-40°F to +150°F)
- with water-based, or fire-resistant, fluids

Change in working length at working PSI ±2%

## Application

- General hydraulics
- Material handling
- Forklifts
- Chemical transfer
- Marine steering

## Features

- Low elongation

## Fitting reference

For hose fittings details refer to Synflex® catalog E-HOOV-MC001-E.

- General hydraulic systems that may contact high voltage sources
- Aerial equipment
- Mobile hydraulics
- Rescue apparatus and tools

**Features**

- SAE J517 non-conductive hose construction
- Less than 50 micro-amperes leakage when subjected to 75,000 volts/ft for five minutes

**Fitting reference**For hose fittings details refer to  
Synflex® catalog E-HOOV-MC001-E.

#### Construction

**Tube:** Polyester

**Reinforcement:** Braided synthetic fiber

**Cover:** Orange, non-perforated, non-stick polyurethane

#### Operating parameters

-54°C to +100°C  
(-65°F to +212°F) or

-40°C to +60°C  
(-40°F to +140°F)  
with water-based, or  
fire-resistant, fluids

Change in working length at  
working PSI ±2%

#### Application

- Electric utility truck
- Hydraulic systems
- Mobile equipment (pickers, utility vehicles)

#### Features

- SAE J517 non-conductive hose construction
- Complies with ANSI A92.2 for vehicle-mounted, aerial devices (i.e., AL)
- Less than 50 micro-amperes leakage when subjected to 75,000 volts/ft for five minutes

#### Fitting reference

For hose fittings details refer to  
Synflex® catalog E-HOOV-MC001-E.

#### Construction

- Tube:** Nylon-lined
- Reinforcement:** Spiral, high tensile aramid fiber
- Cover:** Black, perforated polyurethane

#### Operating parameters

- 40°C to +66°C  
(-40°F to +150°F)
- Change in working length at working PSI ±2%

#### Application

- High pressure hydraulic tools
- Rescue equipment and tools
- High pressure test equipment

#### Features

- Compact size
- Lightweight
- Low elongation

#### 3V10 hose assembly includes:

- 3V10 hose
- 90V permanent steel fitting
- 45J0 hose guard
- Warning tag

#### Fitting reference

For hose fittings details refer to Synflex® catalog E-HOOV-MC001-E.

## Hydraulic hose

Thermoplastic hose

### 3130, 37AL and 30CT

#### Twin-Line Thermoplastic Hose

##### 3130 medium pressure hose

Meets: SAE 100R7

Part number	#	Hose size	Number of hose	Hose I.D.		Length	
				mm	in	mtr	ft
3130-04-2-250BX*	3130-04	2	6,3	0.25	76,2	250	
3130-05-2-250BX*	3130-05	2	7,9	0.31	76,2	250	
3130-06-2-250BX*	3130-06	2	9,7	0.38	76,2	250	
3130-08-2-250BX*	3130-08	2	12,7	0.50	76,2	250	

\* 3130 Twin-Line hose is a stock item. Other 3130 multi-line hoses are built to order. See 3130 series hose on page B-44 for specification details.

Please contact Eaton customer service for twin-line, tri-line, and multi-line configuration options.

##### 37AL medium pressure hose, non-conductive

Meets: SAE 100R7 conductive requirements

Part number	#	Hose size	Number of hose	Hose I.D.		Length	
				mm	in	mtr	ft
37AL-04-2-250BX*	37AL-04	2	6,3	0.25	76,2	250	
37AL-06-2-250BX*	37AL-06	2	9,7	0.38	76,2	250	
37AL-08-2-250BX*	37AL-08	2	12,7	0.50	76,2	250	

\* 37AL Twin-Line hose is a stock item. Other 37AL multi-line hoses are built to order. See 37AL series hose on page B-46 for specification details.

Please contact Eaton customer service for twin-line, tri-line, and multi-line configuration options.

##### 30CT constant pressure hose

Meets: SAE 100R18

Twin-Line and multi-line hose separating tool and instructions are in the Synflex® Thermoplastic Hose and Fittings catalog E-HOOV-MC001-E.

Part number	#	Hose size	Number of hose	Hose I.D.		Length

\* GY (gray) is the standard color for 05

**Construction**

**Tube:** Nitrile

**Reinforcement:** Single fiber braid

**Cover:** Neoprene (black hose), vinyl nitrile (colored hose)

**Operating parameters**

-40°F to +260°F  
(-40°C to +127°C)

**Application**

- Fuel, lubricating oils, air and water
- In-plant robotic manufacturing
- Air lines and air tools

For more information on agency listings, specific fluid applications and high temperature ratings see section A.

**Reinforcement:** Double textile braid

**Cover:** Synthetic rubber

For larger dash sizes, see Catalog A-MM-MC-0001-E.

#### Operating parameters

-40°C to +100°C  
(-40°F to +212°F)

#### Application

- For water, gasoline, and fuel oil

For more information on agency listings, specific fluid applications and high temperature ratings see section A.

**Construction**

**Tube:** New dual extrusion technology polyamide  
Type E veneer

**Reinforcement:**  
Polyester braid

**Cover:** Blended EPDM

**Operating parameters**

-40°C to +140°C  
(-40°F to +284°F)

**R1234yf effusion**  
<1kg/m<sup>2</sup>/yr at 80°C

**R134a effusion**  
<1.5kg/m<sup>2</sup>/yr at 80°C

**Oils**

POE, PAG, Mineral oil,  
Alkybenzene

**Moisture ingestion**

Class I

**Benefits**

- Extremely low permeation
- Excellent heat resistance offering a higher functional temperature range than SAE J2064 Type C or E hoses.
- Ozone and UV resistant
- Easy to install – significant reduction in potential hose damage. GH001 has maximum kink resistance, temperature resistance
- SAE J2064 Type E veneer tube offers excellent oil and refrigerant compatibility

**Application**

- A/C systems for truck, bus, agriculture, construction equipment and refrigeration systems

For more information refer to E-HOAC-BB001-E.

**Fitting reference**

Factory Crimp – contact Eaton technical support.

E-Z Clip fittings – refer to A-HOAC-MC001-E, A/C and Refrigeration hose and fittings.

#### Moisture ingressoin

Class I

#### Features

- Machined hose nipple with two o-rings
- O-ring material - HNBR
- One-piece fitting design, factory crimp
- Abrasion resistant

#### Applications

- Large and medium buses
- Rail
- Applications where extreme flexibility is required for a large-size hose

For more information refer to A-HOAC-MR001-E Multi-Refrigerant Hose and Fittings.

#### Benefits

- Optimum sealing at the hose nipple interface
- Multi-refrigerant compatible
- Significantly exceeds industry standards for refrigerant loss
- Simplifies inventory

#### Fitting reference

Factory crimp fittings available.

**Construction****Tube:** Synflex® Eclipse air brake tubing, 100% polyamide**Operating parameters**-54°C to +93°C  
(-65°F to +200°F)**Application**

- Articulating connections for air brake line systems (connections between towed and towing motor vehicle)
- Tractor-to-trailer air connections used in extremely low temperatures

**Features**

- Superior abrasion resistance
- Excellent return and coil memory
- Enhanced flexibility and extension
- Brass end fittings with corrosion resistant spring guards

**Reinforcement:** Polyester yarn

\*Master pack quantity part numbers listed. For master pack configuration information refer to chart below:

#### Construction

**Tube:** 100% polyamide

**Reinforcement:** Polyester yarn

#### Operating parameters

-54°C to +93°C  
(-65°F to +200°F)

#### Features

- Superior abrasion resistance
- Ease of cutting
- Enhanced flexibility and extension
- Flow performance
- UV stabilized, thermoformable
- Available in standard and custom colors
- Available in all standard sizes

#### Application

- Truck air brake systems
- Trailer air brake systems
- Auxiliary air systems
- Formed tubes
- Formed and straight air brake harness assemblies

#### Fitting reference

##### Brass

For more information on brass fittings see Eaton Brass Products Master Catalog E-BRFI-MC001-E.

#### Construction

**Tube:** Nylon 11

**Cover:** Thermoplastic elastomer

#### Operating parameters

-45°C to +122°C  
(-50°F to +250°F)

#### Application

- Formed or unformed harnesses
- Transportation – trucks, buses and off-highway vehicles
- Construction machinery and equipment
- Agriculture machinery and equipment
- Marine, boats and yachts
- Diesel engines and generators

#### Features

- Excellent flexibility
- Well suited for individual line installation
- Multiple colors
- Designed specifically for diesel fuel applications
- Lightweight fuel tube assemblies can weigh up to 66% less
- Excellent cost/value

#### Standard Compliance

Portions of: SAE J844, J1131, J1394  
ASTM D471, 0624, 0638, D648, 0709, 0746, 0742, 02240

#### Qualified fittings

Contact your Eaton account sales manager for composite and metal fitting options.

For more information refer to the Synflex® Thermoplastic Hose and Fittings E-HOOV-MC001-E.

**4KGEN Synflex®****Diesel fuel kits**

Specifically designed for modification or repair of OEM fuel systems that use Synflex® 4294 or 4297 series fuel tubing.

**4KGEN-08-001 Fuel tubing extension kit**

<b>Part number</b>	<b>Hose size</b>	<b>DN</b>	<b>Description</b>	<b>Qty</b>	<b>Unit of measure</b>
4408-08710*	-08	12	Plastic female fitting	4	Pieces

**4KGEN-10-001 Fuel tubing extension kit**

<b>Part number</b>	<b>Hose size</b>	<b>DN</b>	<b>Description</b>	<b>Qty</b>	<b>Unit of measure</b>
4408-10710*	-10	16	Brass female fitting	4	Pieces
4408-10610	-10	16	Plastic 90° fitting	2	Pieces
4408-10310*	-10	16	Plastic straight fitting	2	Pieces
4297-101FX-001	-10	16	Silver fuel tubing	25	Feet

\* MTO

**Kit content**

- OEM male, female, straight and 90 degree barbed fittings
- Synflex® 4294 or 4297 series tubing

**Application**

- Transportation – trucks, buses, off-highway vehicles
- Construction machinery and equipment
- Agriculture machinery and equipment
- Diesel engines and parts

**Features**

- Synflex® 4KGEN kits can be used to modify tank locations, routings, and repair fuel systems in these and many other applications where diesel fuel is used
- Utilize OEM barbed end fittings to maintain o-ring sealing end connection of the original OEM fuel system
- OEM colors available to maintain the same OEM color code integrity

For more information refer to the Synflex® Thermoplastic Hose and Fittings E-HOOV-MC001-E.

#### Construction

**Tube:** Silicone

**Reinforcement:** 4-ply woven aramid

**Cover:** Red

#### Operating parameters

-54°C to +260°C

(-65°F to +500°F)

#### Application

- High temperature engine

For additional sizes and configurations refer to Eaton bulletin E-HOOV-MC004-E3.

**GH100 ESP™****Braided textile - diesel and biodiesel hose**

High temperature, low pressure oil

Meets: ASTM D380, ASTM D6751, EN412, EN2240

<sup>†</sup> Maximum negative pressure shown for -16 and larger are suitable for those which has suffered no external damage or kinking. If greater negative pressures are required for -16 and larger hoses, the use of an internal support coil is recommended

<sup>‡</sup> Does not meet SAE 100R5 pressure with reusable fittings. -32 size rated to 350 psi with crimp fittings

#### Construction

**Tube:** AQP elastomer

**Reinforcement:** Polyester inner braid, single wire braid

**Cover:** Blue textile braid

#### Operating parameters

-49°C to +150°C  
(-55°F to +302°F)

Air not to exceed  
+121°C (+250°F)

Use with biodiesel  
not to exceed +100°C  
(+212°F) with B2 to B20

#### Application

- Hydraulics handling petroleum base fluids
- Air, gasoline, fuel and lubricating oils, fire resistant hydraulic fluids and other industrial fluids
- Not approved for use with E85

For more information on agency listings, specific fluid applications and high temperature ratings see section A.

- Designed for butane-propane applications on either mobile or stationary equipment

For more information on agency listings, specific fluid applications and high temperature ratings see section A.

**WARNING:** LPG is a very hazardous liquid or gas and should be handled with maximum care to prevent leakage. Since the gas is heavier than air, it may flow along the ground if it escapes and cause an explosion or a fire. No leakage should ever be tolerated.

**Application**

- Steam
- Compressor discharge
- Chemical transfer
- 316 Stainless braided hose can be used in marine applications and other environments where corrosion is an issue

For more information on agency listings, specific fluid applications and high temperature ratings see section A or contact Eaton technical support.

For additional product information refer to the Everflex catalog E-HOEV-MC001-E.

**Fitting reference****Fittings**

For fitting selection see Everflex Catalog E-HOEV-MC001-E.

**Warning:** These hoses can be used to convey hazardous chemicals, steam, hot liquids or other dangerous materials which can cause death, serious bodily injury including burns, pressure wounds or chemical exposure if released accidentally. They should, therefore, only be handled or worked on by personnel properly trained in the safe handling of the materials or chemicals conveyed in the hoses.

♦ "Z" Designates a double braid of 304 stainless steel wire.

\* The operating pressure of 1/2" I.D. hoses is lowered to 1500 psi and 5/8" I.D. hoses are lowered to 1250 psi when Brass Everswage fittings are used.

‡ Maximum negative pressure for -16 and larger are suitable for hose which has suffered no external damage or kinking. If greater negative pressures are required for -16 and larger hoses, the use of an internal support coil is recommended. Use of an internal support coil in -06 and larger hose is recommended for tube support where extended or continuous service at high temperature together with low or negative pressure is expected.

#### Construction

**Tube:** Non-conductive Teflon

**Cover:** One or two layers of stainless steel braid

\* Working pressure ratings with flat Crimped E-Series fittings only

S-4TW	3,500 psi
S-6TW	2,750 psi
S-8TW	2,250 psi
S-10TW	2,000 psi
S-12TW	1,500 psi
S-16TW	1,200 psi
S-18ZTW	1,200 psi

#### Operating parameters

-54°C to +230°C  
(-65°F to +450°F)

For additional product information refer to the Everflex catalog E-HOEV-MC001-E.

#### Application

- Steam
- Compressor discharge
- Chemical transfer
- 316 Stainless braided hose can be used in marine applications and other environments where corrosion is an issue

For more information on agency listings, specific fluid applications and high temperature ratings see section A or contact Eaton technical support.

Super Gem I-57-60

**Warning:** These hoses can be used to convey hazardous chemicals, steam, hot liquids or other dangerous materials which can cause death, serious bodily injury including burns, pressure wounds or chemical exposure if released accidentally. They should, therefore, only be handled or worked on by personnel properly trained in the safe handling of the materials or chemicals conveyed in the hoses.

† Maximum negative pressure for -16 and larger are suitable for hose which has suffered no external damage or kinking. If greater negative pressures are required for -16 and larger hoses, the use of an internal support coil is recommended. Use of an internal support coil in -06 and larger hose is recommended for tube support where extended or continuous service at high temperature together with low or negative pressure is expected.

♦ "Z" Designates a double braid of 304 stainless steel wire.

\* The operating pressure of 1/2" I.D. hoses are lowered to 1500 psi and 5/8" I.D. hoses are lowered to 1250 psi when Brass Everswage fittings are used.

## Construction

**Tube:** Extruded PTFE tube

**Cover:** Single layer stainless steel wire braid

## Operating parameters

-73°C to +260°C  
(-100°F to +500°F)

Steam 200 psi at  
+388°F max

## Application

- Hot air, steam, compressor discharge
- Most chemical applications
- Not recommended for steam-cold water cycling

For more information on agency listings, specific fluid applications and high temperature ratings see section A or contact Eaton technical support.

For additional product information refer to the Everflex catalog E-HOEV-MC001-E.

## How to order

H

### How to order

Accurate processing and prompt delivery of your order depend on easy identification of your requirements. Please order Eaton parts using correct part numbers as described in this catalog. Inquiries and orders should be directed to your Aeroquip Distributor or:

**Eaton Hydraulics**  
14615 Lone Oak Road  
Eden Prairie, MN 55344  
952-937-9800;  
888-258-0222;  
Fax: 952-974-7722  
[www.eaton.com/hydraulics](http://www.eaton.com/hydraulics)

### Part numbers and Dash sizes

Dash size designates the nominal size in 16ths of an inch. This number immediately follows the part number and is separated from it with a dash.

Fittings with "FC" or "FJ" part numbers will have the size expressed in four numerals. The first two numerals indicate the size of the connecting end and the second two numerals indicate the size of the hose end. All other fittings are followed by a dash number which is the nominal size of the fitting expressed in 16ths of an inch. Where two dash numbers are given, the first one generally indicates the pipe or port size and the second indicates the tube or hose size. The hose dash number should always be the same as the last dash number on the fitting.

### Material Designation

Most fittings in this catalog have a material designation as part of the part number. An explanation is shown below.

### Prefix Designations

- |     |                                        |
|-----|----------------------------------------|
| 38  | Brass nipple,<br>steel socket          |
| 44  | Bronze nipple and nut:<br>brass socket |
| 63  | Brass nipple, steel nut<br>and socket  |
| 259 | 316 Stainless steel                    |
| 449 | Malleable iron                         |

### Suffix Designations

- |   |                 |
|---|-----------------|
| B | Brass           |
| C | Stainless steel |
| D | Aluminum alloy  |
| S | Steel           |

### Dimensions

Dimensions given in this catalog for Eaton brand products are approximate and should be used for reference only. Exact dimensional information for a given product is subject to change and varying tolerances; contact Eaton directly for full current information.

### Globally standardized pressure ratings

Eaton has standardized hose burst and operating pressure ratings in cataloging, worldwide. This move toward standardization will slightly alter some of the pressures ratings listed for hoses in this catalog as pressures are rounded off. This is a paper conversion only. This action has no effect on the actual testing and certification of Eaton hoses to stringent product standards.

### Warning

Eaton manufactures the terminal ends of our hose fittings to the appropriate requirements established by the SAE. Therefore, the performance ratings of these hose fittings meet the SAE requirements. It is possible to order a hose assembly with a fitting terminal end that has a performance rating lower than the hose rating. When ordering hose assemblies, please keep the terminal end performance rating in mind since this may affect overall hose assembly performance.

Many hose assembly components (hose and fittings) are easily assembled in the field. However, factory assembled swaged, crimped and reusable hose assemblies are available. For complete information, contact Eaton.

### Mixing/Matching

EATON FITTING TOLERANCES ARE ENGINEERED TO MATCH AEROQUIP HOSE TOLERANCES. THE USE OF EATON FITTINGS ON HOSE SUPPLIED BY OTHER MANUFACTURERS AND/OR THE USE OF AEROQUIP HOSE WITH FITTINGS SUPPLIED BY OTHER MANUFACTURERS' BRANDS MAY RESULT IN THE PRODUCTION OF UNRELIABLE AND UNSAFE HOSE ASSEMBLIES AND IS NEITHER RECOMMENDED NOR AUTHORIZED BY EATON.

EATON SHALL NOT BE SUBJECT TO AND DISCLAIMS ANY OBLIGATIONS OR LIABILITIES (INCLUDING BUT NOT LIMITED TO ALL CONSEQUENTIAL, INCIDENTAL AND CONTINGENT DAMAGES) ARISING OUT OF BREACH OF CONTACT OR OF WARRANTY OR ARISING FROM TORT CLAIMS (INCLUDING WITHOUT LIMITATION NEGLIGENCE AND STRICT LIABILITY) OR OTHER THEORIES OF LAW WITH RESPECT TO ANY HOSE ASSEMBLIES NOT PRODUCED FROM GENUINE EATON HOSE FITTINGS, HOSE AND EATON APPROVED EQUIPMENT, AND IN CONFORMANCE WITH EATON PROCESS AND PRODUCT INSTRUCTIONS FOR EACH SPECIFIC HOSE ASSEMBLY.

FAILURE TO FOLLOW EATON PROCESS AND PRODUCT INSTRUCTIONS AND LIMITATIONS COULD LEAD TO PREMATURE HOSE ASSEMBLY FAILURES RESULTING IN PROPERTY DAMAGE, SERIOUS INJURY OR DEATH.

## Global crimp sockets, nipples and fittings

### Global part numbering system

Part numbers collapse to the shortest possible number of digits:

It is assumed that a global fitting has a straight configuration unless a code is added to designate otherwise.

e.g., 1SA8FJ8 has a straight configuration

1SA8FJA8 has a 45° elbow configuration

Dashes and unnecessary zeros are not used.

e.g., 1/4" is designated by "4" not "-4" or "04"

5/8" is designated by "10" not "-10"

### Global crimp sockets

Complete socket number:

**1S A 8**

Global 2-piece part number

Wire braid construction

A = Single wire braid

B = Double wire braid

Hose size\*

### Crimp fittings

Fittings are ordered as complete assemblies or as component parts.

Complete fitting number:

**FJ9896- 20 20 S**

Basic part number

Pipe or port size

Mating hose size

Material designation suffix

### Crimp socket

Complete socket number:

**FC2717- 20 S**

Basic part number

Socket hose size

Material designation suffix

### Crimp nipple

Complete nipple number:

**FC2710- 20 20 S**

Basic part number

Socket or port size

Socket hose size

Material designation suffix

### Global crimp nipples/fittings

Complete nipple part number:

**1S A 8 FJ A 8**

Product group code

1S = Global 2-piece part number

1A = TTC fitting part number

1B = TTC12 fitting part number

1G = OTC Global fitting part number

4S = 4S fitting part number for four spiral hose

6S = 6S fitting part number for six spiral hose

Material stock code

If material is round stock, then this position collapses.

A = inch hex stock

(metric hex, this position collapses)

For 1 1/4" Braided hose fittings:

P = 1-wire braid hose socket with no hex

R = 1-wire braid hose socket with inch hex

T = 2-wire braid hose socket with no hex

V = 2-wire braid hose socket with inch hex

End connection size\*

End connection code

BF = BSP Female Swivel (1 hex)

BP = BSP Male Parallel

BT = BSP Male Tapered

CT = Cat Flange

DK = 24 Male (light duty)

DL = DKO Female Swivel (light duty)

DS = DKO Female Swivel (heavy duty)

EK = 24 Male (heavy duty)

FH = Flange Code 62

FJ = Female JIC Swivel

FL = Flange Code 61

FR = Female ORS

FS = Female SAE Swivel

JF = JIS Female Swivel

JM = BSP Female Swivel (2 hexes)

KF = Komatsu Female Swivel

KS = Komatsu Split Flange

MB = Male Boss O-Ring

MF = Male Inverted Flare

MJ = Male JIC

MP = Male Pipe

MR = Male ORS

PF = Female Pipe Swivel

PS = Pipe Swivel

Connecting end configuration code

If nipple has a straight configuration, then this position collapses.

A = 45°

B = 90°, standard or short drop

C = 90°, long drop

D = 22-1/2°

E = 67-1/2°

F = 30°

G = 60°

Hose size\*

Material Designation

C = stainless steel, if fitting is zinc plated carbon steel (standard), this position collapses.

\*When ordering sizes 3, 4, 5, 6 and 8 the part number requires only single digits.

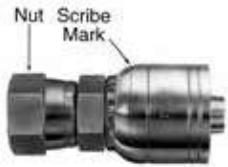

# Crimp fittings

Socket data

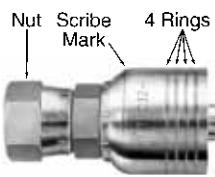

H

## Socket data

TTC-

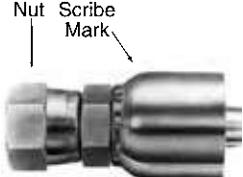

TTC12-

**Scribe mark:** For TTC and TTC12 Fittings, the scribe mark identifies crimp length indicator for assembly; See Document A-EQCR-TM001-E for details.

1G

### Crimp Socket data – Socket to hose correct combinations

Use of the correct Eaton socket with a given Aeroquip hose is essential for proper assembly and performance. Virtually all Eaton hose sockets are marked with the socket part number and dash size. Using this number, from the following table, the correct hose or hoses may be found and dash sizes matched, to assure the correct combination.

1SA

1SB

### Global skive socket identification

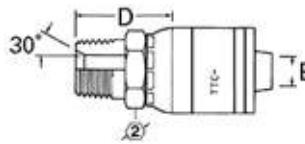

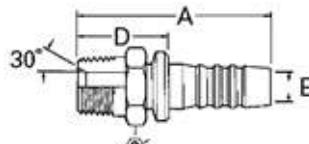

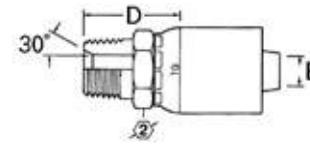

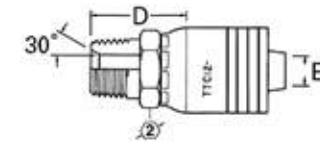

1SA sockets are stamped 1SA(size) for one wire braid hose and 1SB sockets are stamped 1SB(size) for two wire braid hose. 1SA sockets have one ring and 1SB sockets have two rings grooved around the circumference of each socket.

### Global identification marking

Global hose fittings are identified with the Eaton trademark and the hose size. In addition, global sockets are identified with the following:

Identification marking	Fitting style	Hose/Socket description
1 ring 1SA(size)	skive	One wire braid hose and skive type socket
2 rings 1SB(size)	skive	Two wire braid hose and skive type socket
2 rings 1 ring 1 scribe mark TTC-(size)	Thru-the-cover	One wire and two wire braid hose and TTC socket
4 rings 1 scribe mark TTC12-(size)	Spiral thru-the-cover	Four spiral wire hose and TTC12 socket
1 scribe mark 1G (size)	Over the cover	Textile braid and suction hoses and OTC socket (SAE 100R3, R4 and R6 hose styles)

# Crimp fittings

Braided, low pressure and four spiral  
(TTC / 1SA / 1GA / TTC-12 Series)

H

## Female ORS swivel (FR)

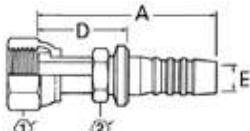

### 1 Global TTC fittings

#### For use with hose:

2661(-12 thru -32), FC310, FC510, FC579, FC611, FC619 (-12 thru -32), FC639/FC839B, FC693, FC735, FC849/ FC849B, GH120, GH194, GH195, GH663, GH681, GH781, GH793.

### 2 Global nipples

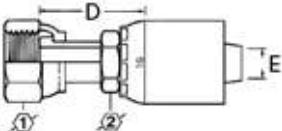

#### For use with hose:

**Clamp:** 2661 (-12 thru -20), FC619 (-12 thru -20).

**Socket 1SA:** 2681, FC310, FC510, FC639/ FC839B (-4 thru -8), GH194 (-4 thru -20), GH663, GH681.

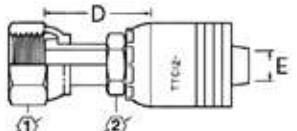

### 3 Global OTC fittings

#### For use with hose:

2583, 2661, FC466, FC498, FC598, FC619, FC699.

### 4 Global TTC12 fittings

#### For use with hose:

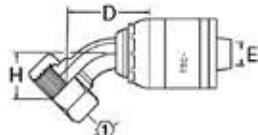

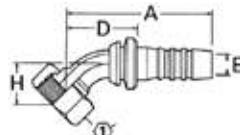

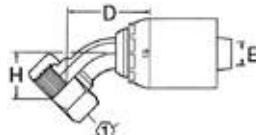

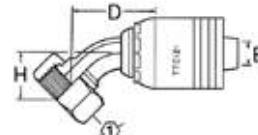

FC636, FC736, GH493, EC525.

# Crimp fittings

Braided, low pressure and four spiral  
(TTC / 1SA / 1GA / TTC-12 Series)

H

## Male ORS (MR)<sup>†</sup>

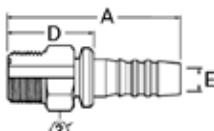

### 1 Global TTC fittings

#### For use with hose:

2661(-12 thru -32), FC310, FC510, FC579, FC611, FC619 (-12 thru -32), FC639/FC839B, FC693, FC735, FC849/FC849B, GH120, GH194, GH195, GH663, GH681, GH781, GH793.

### 2 Global nipples

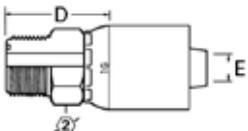

#### For use with hose:

**Clamp:** 2661 (-12 thru -20), FC619 (-12 thru -20).

**Socket 1SA:** 2681, FC310, FC510, FC639/FC839B (-4 thru -8), GH194 (-4 thru -20), GH663, GH681.

**Socket 1SB:** 2781, FC466, FC195, FC498, FC598, FC579, FC639/FC839B (-10 thru -16), FC735 (-4 thru -20), FC849/FC849B (-06 thru -12), GH120 (-4 thru -20), GH195, GH781 (-04 thru -20), GH793, 2766.

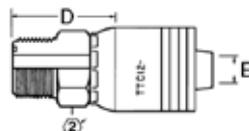

### 3 Global OTC fittings

#### For use with hose:

2583, 2661, FC466, FC498, FC598, FC619, FC699.

### 4 Global TTC12 fittings

#### For use with hose:

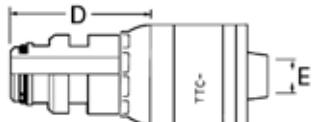

FC636, FC736, GH493, EC525.

## SAE code 61 split flange 45° elbow (FLA) - Cont.

H

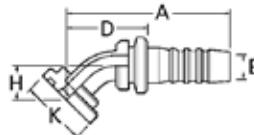

1 Global TTC fittings

## For use with hose:

2661(-12 thru -32), FC310, FC510, FC579, FC611, FC619 (-12 thru -32), FC639/FC839B, FC693, FC735, FC849/GH849B, GH120, GH194, GH195, GH663, GH681, GH781, GH793.

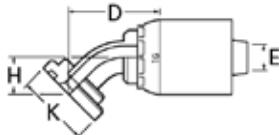

2 Global nipples

## For use with hose:

**Clamp:** 2661 (-12 thru -20), FC619 (-12 thru -20).  
**Socket 1SA:** 2681, FC310, FC510, FC639/FC839B (-4 thru -8), GH194 (-4 thru -20), GH663, GH681.

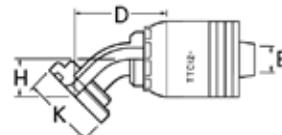

3 Global OTC fittings

## For use with hose:

2583, 2661, FC466, FC498, FC598, FC619, FC699.

4 Global TTC12 fittings

## For use with hose:

FC636, FC736, GH493, EC525.

(TTC / 1SA / 1GA / TTC-12 Series)

H

## SAE code 61 split flange 60° elbow (FLG)

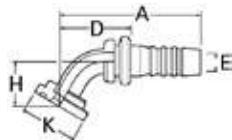

**1 Global TTC fittings**

**For use with hose:**

2661(-12 thru -32), FC310, FC510, FC579, FC611, FC619 (-12 thru -32), FC639/FC839B, FC693, FC735, FC849/ FC849B, GH120, GH194, GH195, GH663, GH681, GH781, GH793.

**2 Global nipples**

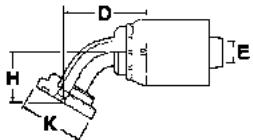

**For use with hose:**

**Clamp:** 2661 (-12 thru -20), FC619 (-12 thru -20).

**Socket 1SA:** 2681, FC310, FC510, FC639/ FC839B (-4 thru -8), GH194 (-4 thru -20), GH663, GH681.

**Socket 1SB:** 2781, FC466, FC195, FC498, FC598, FC579, FC639/FC839B (-10 thru -16), FC735 (-4 thru -20), FC849/FC849B (-06 thru -12), GH120 (-4 thru -20), GH195, GH781 (-04 thru -20), GH793, 2766.

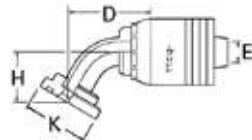

**3 Global OTC fitting**

**For use with hose:**

2583, 2661, FC466, FC498, FC598, FC619, FC699.

**4 Global TTC12 fittings**

**For use with hose:**

FC636, FC736, GH493, EC525.

## Split flanges

### Split flanges

Eaton has standard pressure series (code 61) and high pressure series (code 62) split flange components in kit form that save time in selecting and ordering. Each kit includes two flange halves, four grade-8 hex bolts, four lock washers and an O-Ring. The standard kit has a Buna-N 90 durometer O-Ring that is compatible with petroleum and water-base hydraulic fluids. Optional kits contain EPDM and Viton\* O-Ring for applications where fluid compatibility or high temperatures require other than Buna-N O-Ring.

\*Viton is a trademark of E.I. DuPont

Two methods can be used to determine the flange dash size and code. The first is by measuring the flange head diameter on the fitting itself. This is referred to as the "K" dimension. The second is by measuring the "A" dimension on the flange or the flange port. Either will determine the dash size and the code since these dimensions are exclusive to either code 61 or code 62 split flange kits. See chart below for these dimensions.

In some cases, split flange fittings are available for hoses which exceed the pressures listed; when ordering fittings or hose assemblies, the terminal end performance rating may reduce the overall rating of the assembly.

<b>"A" Dim.</b>	<b>"K" Flange head diameter</b>		<b>Flange dash size</b>	<b>Maximum operating pressure*</b>		<b>Recommended bolt torque</b>
	<b>in</b>	<b>in</b>	<b>mm</b>	<b>bar</b>	<b>psi</b>

3.81	3.12	-32	420,0	6000	2400–2600	

\*Per SAE J518 standard.

### Assembly procedure

Many leakage problems can be avoided if the split flanges are properly assembled.

### To properly assemble

1. Clean all mating surfaces.
2. Lubricate the O-Ring.
3. Partially tighten each bolt in rotation until all are fully tightened to the recommended torque value.

### How to order

1. Determine the dash size and the code.
2. Select O-Ring for fluid compatibility.
3. Order by kit number shown on pages H-88 to H-89.

## O-Rings and kits

H

### Designating separate SAE O-Ring boss

To order Eaton O-Ring separately without fittings specify the size and material by using the O-Ring base number and dash size. The charts offer a simple method to assure the correct O-Ring for your application.

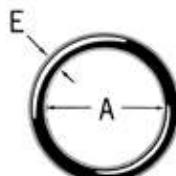

O-Ring base no.	Material	Operating temperature range
22617 (Standard)	Buna-N Nitrile rubber 90 Durometer	-30°F to +250°F (-34°C to +121°C)
22033	EPDM Ethylene propylene diene monomer	-65°F to +212°F (-55°C to +100°C)
22068	Viton Fluoroelastomer 90 Durometer	-15°F to +400°F (-25°C to +205°C)
22012	Buna-N, Low temperature nitrile rubber 90 Durometer	-65°F to +225°F (-55°C to +107°C)

O-Ring dash size	Tube size	A		E	
		mm	in	mm	in
-4	-04 (1/4)	8,9	0.351	1,8	0.072
-6	-06 (3/8)	11,9	0.468	2,0	0.078
-8	-08 (1/2)	16,3	0.644	2,3	0.087
-10	-10 (5/8)	19,3	0.755	2,5	0.097
-12	-12 (3/4)	23,4	0.924	3,0	0.116

# Hose fittings – Reusable

How to order

## How to order-Reusable fittings

Accurate processing and prompt delivery of your order depend on easy identification of your requirements. Please order Eaton parts using correct part numbers as described in this catalog. Inquiries and orders should be directed to your Aeroquip Distributor or:

**Eaton Hydraulics**  
14615 Lone Oak Road  
Eden Prairie, MN 55344  
952-937-9800;  
888-258-0222;  
Fax: 952-974-7722  
[www.eaton.com/hydraulics](http://www.eaton.com/hydraulics)

### Part numbers and Dash sizes

Dash size designates the nominal size in 16ths of an inch. This number immediately follows the part number and is separated from it with a dash.

Fittings with "FC" or "FJ" part numbers will have the size expressed in four numerals. The first two numerals indicate the size of the connecting end and the second two numerals indicate the size of the hose end. All other fittings are followed by a dash number which is the nominal size of the fitting expressed in 16ths of an inch. Where two dash numbers are given, the first one generally indicates the pipe or port size and the second indicates the tube or hose size. The hose dash number should always be the same as the last dash number on the fitting.

### Reusable fittings

Fittings are ordered as complete assemblies.

Complete number: 412-

**412-** **8** **10** **S**

Basic part number 412-

Pipe or port size (in 16ths of an inch) 8

Mating hose size 10

Material designation suffix S

### Material Designation

Most fittings in this catalog have a material designation as part of the part number. An explanation is shown below.

### Prefix Designations

- 38 Brass nipple,  
steel socket
- 44 Bronze nipple and nut: brass socket
- 63 Brass nipple, steel nut and socket
- 259 316 Stainless steel
- 449 Malleable iron

### Suffix Designations

- B Brass
- C Stainless steel
- D Aluminum alloy
- S Steel

### Dimensions

Dimensions given in this catalog for Eaton brand products are approximate and should be used for reference only. Exact dimensional information for a given product is subject to change and varying tolerances; contact Eaton directly for full current information.

### Globally standardized pressure ratings

Eaton has standardized hose burst and operating pressure ratings in cataloging, worldwide. This move toward standardization will slightly alter some of the pressures ratings listed for hoses in this catalog as pressures are rounded off. This is a paper conversion only. This action has no effect on the actual testing and certification of Eaton hoses to stringent product standards.

### Warning

Eaton manufactures the terminal ends of our hose fittings to the appropriate requirements established by the SAE. Therefore, the performance ratings of these hose fittings meet the SAE requirements. It is possible to order a hose assembly with a fitting terminal end that has a performance rating lower than the hose rating. When ordering hose assemblies, please keep the terminal end performance rating in mind since this may affect overall hose assembly performance.

Many hose assembly components (hose and fittings) are easily assembled in the field. However, factory assembled swaged, crimped and reusable hose assemblies are available. For complete information, contact Eaton.

### Mixing/Matching

EATON FITTING TOLERANCES ARE ENGINEERED TO MATCH AEROQUIP HOSE TOLERANCES. THE USE OF EATON FITTINGS ON HOSE SUPPLIED BY OTHER MANUFACTURERS AND/OR THE USE OF AEROQUIP HOSE WITH FITTINGS SUPPLIED BY OTHER MANUFACTURERS' BRANDS MAY RESULT IN THE PRODUCTION OF UNRELIABLE AND UNSAFE HOSE ASSEMBLIES AND IS NEITHER RECOMMENDED NOR AUTHORIZED BY EATON.

EATON SHALL NOT BE SUBJECT TO AND DISCLAIMS ANY OBLIGATIONS OR LIABILITIES (INCLUDING BUT NOT LIMITED TO ALL CONSEQUENTIAL, INCIDENTAL AND CONTINGENT DAMAGES) ARISING OUT OF BREACH OF CONTACT OR OF WARRANTY OR ARISING FROM TORT CLAIMS (INCLUDING WITHOUT LIMITATION NEGLIGENCE AND STRICT LIABILITY) OR OTHER THEORIES OF LAW WITH RESPECT TO ANY HOSE ASSEMBLIES NOT PRODUCED FROM GENUINE EATON HOSE FITTINGS, HOSE AND EATON APPROVED EQUIPMENT, AND IN CONFORMANCE WITH EATON PROCESS AND PRODUCT INSTRUCTIONS FOR EACH SPECIFIC HOSE ASSEMBLY.

FAILURE TO FOLLOW EATON PROCESS AND PRODUCT INSTRUCTIONS AND LIMITATIONS COULD LEAD TO PREMATURE HOSE ASSEMBLY FAILURES RESULTING IN PROPERTY DAMAGE, SERIOUS INJURY OR DEATH.

**Reusable Socket Data****Socket to hose correction combinations**

Use of the correct Eaton socket with a given Aeroquip hose is essential for proper assembly and performance.

Virtually all Eaton hose sockets are marked with the socket part number and dash size. Using this number, from the table below, the

correct hose or hoses may be found and dash sizes matched, to assure the correct combination.

<b>Reusable sockets</b>	<b>Socket base part number</b>	<b>Aeroquip hose base part number</b>	<b>Dash sizes</b>

\*Requires tools for assembly

† Also supplied in brass. To order, substitute "B" for "S" in part number

†† Available in stainless steel. To order, drop the "S" suffix and add "259-" prefix

**Note:** For correct socket part number, see page I-3.

**For use with hose:**  
1503, 2580, 2651, FC234,  
FC300, FC321, FC350,  
FC355, FC802

## Split flanges

### Split flanges

Eaton has standard pressure series (code 61) and high pressure series (code 62) split flange components in kit form that save time in selecting and ordering. Each kit includes two flange halves, four grade-8 hex bolts, four lock washers and an O-Ring. The standard kit has a Buna-N 90 durometer O-Ring that is compatible with petroleum and water-base hydraulic fluids. Optional kits contain EPDM and Viton® O-Ring for applications where fluid compatibility or high temperatures require other than Buna-N O-Ring.

\*Viton is a trademark of E.I. DuPont

Two methods can be used to determine the flange dash size and code. The first is by measuring the flange head diameter on the fitting itself. This is referred to as the "K" dimension. The second is by measuring the "A" dimension on the flange or the flange port. Either will determine the dash size and the code since these dimensions are exclusive to either code 61 or code 62 split flange kits. See chart below for these dimensions.

In some cases, split flange fittings are available for hoses which exceed the pressures listed; when ordering fittings or hose assemblies, the terminal end performance rating may reduce the overall rating of the assembly.

<b>"A" Dim.</b>	<b>"K" Flange head diameter</b>		<b>Flange dash size</b>	<b>Maximum operating pressure*</b>		<b>Recommended bolt torque</b>
	<b>in</b>	<b>in</b>	<b>mm</b>	<b>bar</b>	<b>psi</b>	<b>lb-in</b>
<b>Code 61</b>						
1.50	1.19		-08	350,0	5000	175–225
1.88	1.50		-12	350,0	5000	225–350
2.06	1.75		-16	350,0	5000	325–425
2.31	2.00		-20	280,0	4000	425–550
2.75	2.38		-24	210,0	3000	550–700
3.06	2.81		-32	210,0	3000	650–800
3.50	3.31		-40	175,0	2500	950–1100
4.19	4.00		-48	140,0	2000	1650–1800
<b>Code 62</b>						
1.59	1.25		-08	420,0	6000	175–225
2.00	1.63		-12	420,0	6000	300–400
2.25	1.88		-16	420,0	6000	500–600
2.62	2.12		-20	420,0	6000	750–900
3.12	2.50		-24	420,0	6000	1400–1600
3.81	3.12		-32	420,0	6000	2400–2600

\*Per SAE J518 standard.

### Assembly procedure

Many leakage problems can be avoided if the split flanges are properly assembled.

### To properly assemble

1. Clean all mating surfaces.
2. Lubricate the O-Ring.
3. Partially tighten each bolt in rotation until all are fully tightened to the recommended torque value.

### How to order

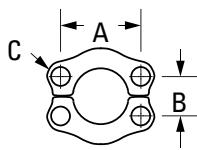

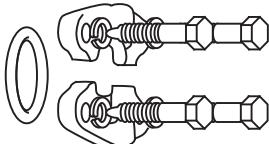

1. Determine the dash size and the code.
2. Select O-Ring for fluid compatibility.
3. Order by kit number shown on pages I-62 to I-63.

Material: Steel with bonded Nitrile (Buna-N) seal.

# Hose fittings – Reusable

## O-Ring and kits

### Designating separate SAE O-Ring boss

To order Eaton O-Ring separately without fittings specify the size and material by using the O-Ring base number and dash size. The charts offer a simple method to assure the correct O-Ring for your application.

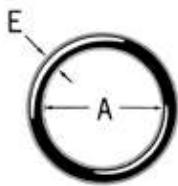

O-Ring base no.	Material	Operating temperature range
22617 (Standard)	Buna-N Nitrile rubber 90 Durometer	-30°F to +250°F (-34°C to +121°C)
22033	EPDM Ethylene propylene diene monomer	-65°F to +212°F (-55°C to +100°C)
22068	Viton Fluoroelastomer 90 Durometer	-15°F to +400°F (-25°C to +205°C)
22012	Buna-N, Low temperature nitrile rubber 90 Durometer	-65°F to +225°F (-55°C to +107°C)

O-Ring dash size	Tube size	A		E	
		mm	in	mm	in
-4	-04 (1/4)	8,9	0.351	1,8	0.072
-6	-06 (3/8)	11,9	0.468	2,0	0.078
-8	-08 (1/2)	16,3	0.644	2,3	0.087
-10	-10 (5/8)	19,3	0.755	2,5	0.097
-12	-12 (3/4)	23,4	0.924	3,0	0.116
-16	-16 (1)	29,7	1.171	3,0	0.116
-20	-20 (1 1/4)	37,6	1.475	3,0	0.118
-24	-24 (1 1/2)	43,7	1.720	3,0	0.118

### Designating separate ORS O-Ring

To order Eaton O-Ring separately without fittings specify the size and material by using the O-Ring designator and O-Ring base number. The charts to the right offer a simple method to assure the correct O-Ring for your application.

O-Ring base no.	Material	Operating temperature range
FF9446 (Standard)	Buna-N Nitrile Rubber 90 Durometer	-40°F to +250°F (-40°C to +121°C)
FF9807	EPDM Ethylene propylene diene monomer	-65°F to +300°F (-55°C to +150°C)
22046	Viton Fluoroelastomer 90 Durometer	-15°F to +400°F (-25°C to +205°C)
FF9855	Buna-N, Low Temperature Nitrile Rubber 90 Durometer	-65°F to +225°F (-55°C to +107°C)
22546	Neoprene 90 Durometer	-65°F to +300°F (-55°C to +150°C)

O-Ring dash size	Tube size	A		E	
		mm	in	mm	in
-11	-04	7,6	0.301	1,8	0.07
-12	-06	9,2	0.364	1,8	0.07

# Adapters and tube fittings

## Application data

J

The Eaton ORS™ connection is the universal answer to troublesome fluid leakage problems

### ORS connection hose assembly

The ORS connection can be used with flexible hydraulic hose, combining the reusability of the hose fitting and the ORS connection. The result is the ultimate reusable fitting.

**ORS connection hose assembly**

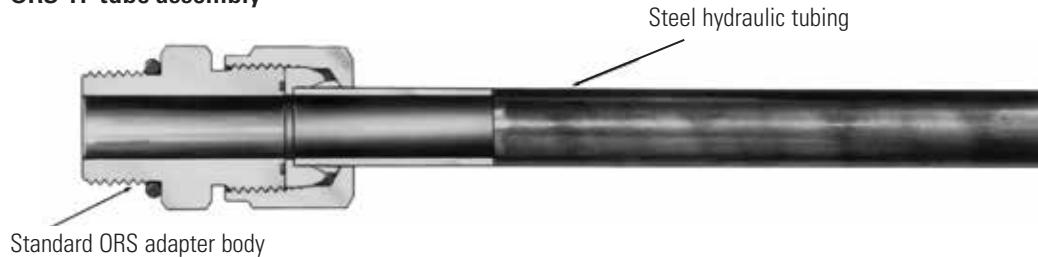

### ORS Tube assemblies

The ORS connection can be attached to hydraulic tubing to make a tube assembly.

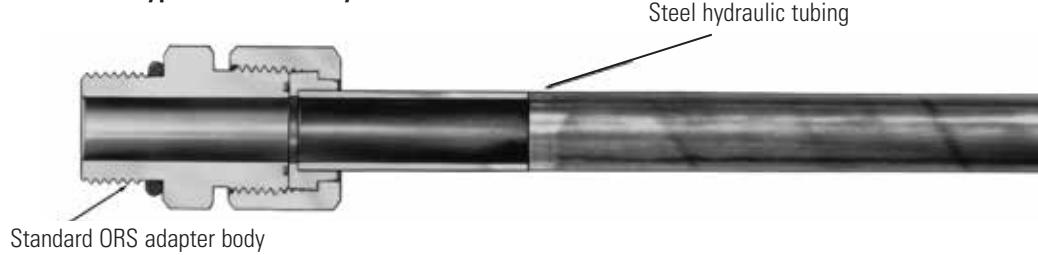

Two methods of attachment are available:

- **ORS-TF:** The ORS female can be jointed directly to steel tubing with the ORS-TF (wedge-type) tube fitting, another Eaton innovation. The fitting becomes an integral part of your system at a fraction of the time and expense brazing requires. The versatility these options provides make ORS the only connection you need for high-pressure situations. It attaches to most types of fluid conveying lines, controlling most types of fluid, facing the toughest conditions.
- **ORS-braze type:** The ORS component can be brazed to hydraulic tubing

**ORS-TF tube assembly**

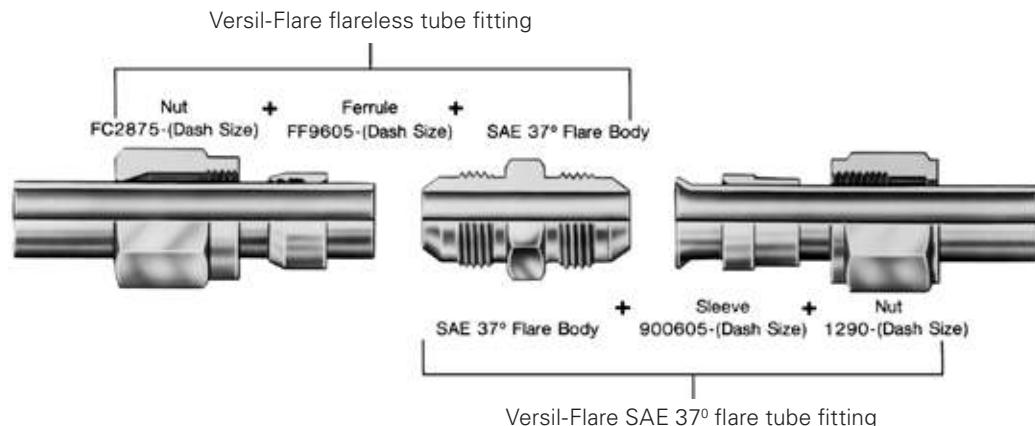

**ORS-Braze type tube assembly**

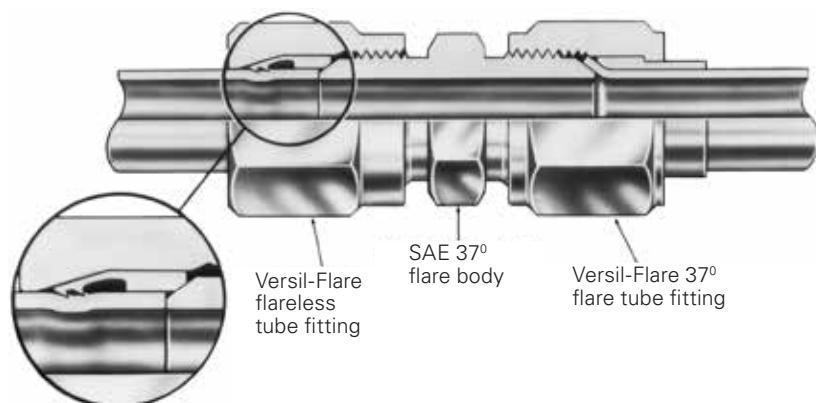

## Versil-Flare™ flareless and Versil-Flare SAE 37° flared type

Both styles use the same SAE 37° flared body

### Before connection

### After connection

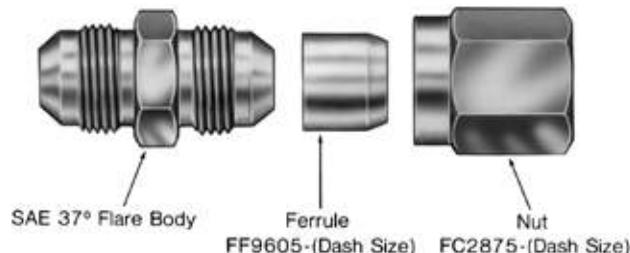

One inventory of bodies (any standard SAE 37° flare fitting) allows both flareless and flared type connection of standard steel hydraulic tubing. It is no longer necessary to inventory flared tube fittings plus the special bodies, nuts and sleeves for flareless tube fittings. The Eaton total tube fitting concept reduces inventory expense.

# Adapters and tube fittings

Application data

J

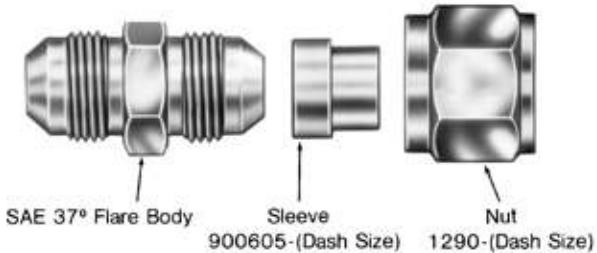

## Eaton Versil-Flare™ flareless tube fitting

The Eaton Versil-Flare flareless tube fitting can use any standard SAE 37° male flare adapter or hose fitting as a body. This eliminates the need to inventory special flareless tube fitting bodies and results in reduced inventory expense. Eaton Versil-Flare flareless tube fittings are available in size from 3/16" tube O.D. to 2" tube O.D.

Presetting tools and extra assembly time are eliminated because there's no need for flaring, special preparation or presetting with the Eaton Versil-Flare flareless tube fitting. The chance of assembly error is reduced because the ferrule can be installed only one way and assembly is the same for all sizes and tube wall thicknesses. This assures a tight joint every time. These features improve production rates.

## Eaton Versil-Flare™ flared tube fitting

The Eaton industrial standard three piece Versil-Flare flared type tube fitting can be used on the full range of standard steel hydraulic tubing in various wall thicknesses from 3/16" tube O.D. to 2" tube O.D. All three components are constructed from high quality zinc plated steel for long service life.

The standard SAE 37° flare angle is used to produce a highly efficient seal under hydraulic pressures. The sleeve is used to help support the tube and absorb vibration.

Assembly is easy. A properly sized wrench and flaring tool are all that is necessary. This is important in tight locations. Eaton standard SAE 37° flare type fittings can also be dis-assembled and reassembled repeatedly.

Eaton quality is built into every component to assure leakproof connections. The Eaton standard SAE 37° flare type tube fitting conforms to the following hydraulic tube fitting standards. Society of Automotive Engineers, SAE J514.

## Selection and sizing for both Versil-Flare flareless and Versil-Flare flared tube fittings

### Tubing selection and sizing

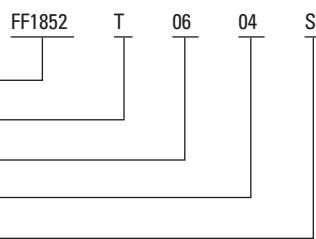

Both Eaton Versil-Flare flareless and flared tube fittings can be used with SAE J-525 electric resistance welded, cold worked annealed, SAE J-524 seamless annealed tubing and SAE J527 brazed double wall low carbon steel tubing. SAE J356 welded flash controlled normalized steel tubing can only be used with Eaton Versil-Flare flareless tube fittings. **The maximum hardness of the above tubing should not exceed Rockwell B65.** Selection of proper tubing material, size and wall thickness depends on corrosion conditions, pressure and flow requirements and other operating requirements of the system.

## How to order adapters

### Adapter part numbers

Adapter part numbers consist of a base number followed by a size designation. If the part number contains a "T" character between the base number and size designator, the first size designator signifies the tube size.

Example:

Base part number \_\_\_\_\_

"T" character \_\_\_\_\_

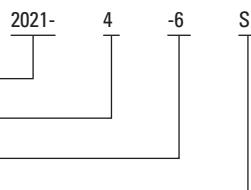

Tube size \_\_\_\_\_

Pipe or port size \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

If the part number does not contain a "T" character between the base number and the size description, the first size designation signifies the port size.

Example:

Base part number \_\_\_\_\_

Pipe or port size \_\_\_\_\_

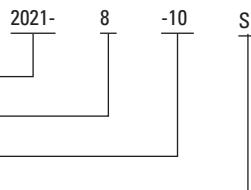

Tube size \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

## How to order adapters

Adapters are ordered using the complete part number as shown on the adapter pages.

Example:

Base part number \_\_\_\_\_

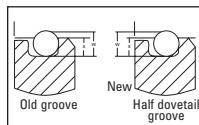

Pipe or port size \_\_\_\_\_

Tube or hose end \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

### ORS adapters conversion\*

ORS adapters come standard with the half dovetail groove design. The half dovetail groove is manufactured with an angle on the OD wall. This angle captures the O-Ring for maximum retention. For ease of installation, a half dovetail groove installation tool may be used.

\*Eaton reserves the right to use straight groove on some ORS.

### Half dovetail groove installation tool

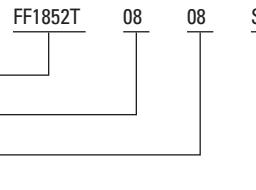

The half dovetail groove installation tool compresses the O-Ring, allowing it to easily slide into the groove in the adapter. Use of the tool maximizes efficiency and minimizes any fatigue that may be associated with repeated insertions over an extended period of time. One tool is required per dash size (or by adapter size). Each tool comes with an illustrated instruction sheet. Tools are available by using the following part numbers: FT1405-04, FT1405-06, FT1405-08, FT1405-10, FT1405-12, FT1405-16, FT1405-20, FT1405-24.

## How to order ORS adapters and tube fittings

### ORS tube fitting body with O-Ring, locknut and washer, where applicable.

Example:

Base part number \_\_\_\_\_

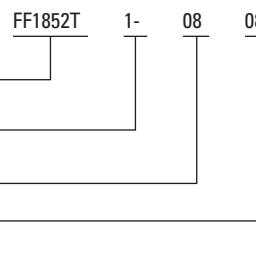

ORS tube size \_\_\_\_\_

Pipe or port size \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

### ORS tube fitting body without O-Ring

Example:

Base part number \_\_\_\_\_

Add 1- after base part number to eliminate O-Rings \_\_\_\_\_

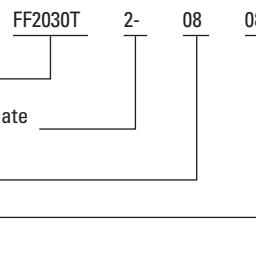

ORS tube size \_\_\_\_\_

Pipe or port size \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

### ORS bulkhead tube fitting body without bulkhead nut or O-Ring

Example:

Base part number \_\_\_\_\_

Add 2- after base part number to eliminate bulkhead nut \_\_\_\_\_

ORS tube size \_\_\_\_\_

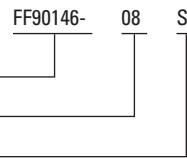

Pipe or port size \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

## ORS-TF tube fitting components

**ORS-TF tube fittings, nut, ferrules, and sleeves can be ordered under the following kit part number:**

Example:

Kit base part number \_\_\_\_\_

Dash size \_\_\_\_\_

Material designation suffix (steel) \_\_\_\_\_

By ordering a single part number in kit form, you will receive the components ready to be assembled to an ORS tube fitting body.

Example:

FF90146-08S includes:

FC1851-08S (ORS-TF Nut)

FF90102-08S (ORS-TF Ferrule)

FF90103-08S (ORS-TF Sleeve)

# Adapters and tube fittings

## Part structure

J

### How to order ORS adapters and tube fittings

(continued)

#### Nuts and shoulders (Braze type)

Nuts and shoulders can be ordered separately. Simply use the base number, dash size, and material designation.

Example:

FC2326 -04 S

Base part number

Dash size

Material designation suffix (steel) —

#### O-Rings

Buna-N O-Rings are standard. Other materials may also be specified by adding a material designator prefix if the part number begins with a numeric, and a material designator suffix if the part number begins with an alpha character. In all cases, the suffix "S" shall be omitted.

Material designation prefix/suffix	Material	Operating temperature range
S	90 Durometer Buna-N-Nitrile Rubber	-40°F to +250°F (-40°C to +121°C)
212	80 Durometer EPDM Ethylene propylene diene monomer	-65°F to +300°F (-55°C to +150°C)
213	90 Durometer Viton Fluoroelastomer	-15°F to +400°F (-26°C to +204°C)
214	90 Durometer Buna-N-Low Temperature Nitrile	-65°F to +225°F (-55°C to +100°C)
352	70 Durometer Neoprene	-65°F to +300°F (-55°C to +150°C)

Example:

FF2031T0804 -213

ORS/male NPTF adapter base part number and size

Suffix for Viton

#### O-Rings can be ordered separately

Example:

FF9446- 11

O-Rings base part number

Dash size

\*See ORS O-Ring chart on page J-126

#### Body material

Steel is standard. Other materials may also be specified by adding a material designator prefix if the part number begins with a numeric, and a material designator suffix if the part number begins with an alpha character. In all cases, the suffix "S" shall be omitted.

Material designation prefix/suffix	Material
B (suffix only)	Brass
259	316-Stainless
4	Monel
S	Steel

### How to order Conversion adapters BSPP/BSPT

Example:

GG110-NP 08 -08

Base part number

Tube end dash size

Port thread dash size

#### Metric

Example:

GG108-NP 08 -16

Base part number including material

Tube end dash size

Port thread size in mm

#### Dimensions

Eaton tube fittings are ordinarily designed and produced to the functional requirements set forth in SAE Standards J512, J513, J514, J1926 and J1453. However, in some cases the envelope dimensions of certain components vary slightly from cataloged or SAE referenced dimensions. The SAE reference numbers and fitting descriptions given are in accordance with SAE Standard J846.

#### Availability

All items listed in the current price schedule are normally carried in stock. Price and delivery of non-stocked and special parts may be obtained from your Eaton Sales Representative or Distributor.

#### Loctite™ Vibra-Seal 516 for external pipe threads

Loctite Vibra-Seal has the following characteristics:

- Non-hardening thread sealant
- Resists shredding and peeling during assembly
- Can be reused up to 5 times without recoating
- Provides resistance to vibrational loosening
- Excellent resistance to solvents and oils
- Operating temperatures range -65°F to +250°F

Machine applied so that it leaves first 1/2 to 2 threads uncovered for ease of assembly. Because of the excellent characteristics of this product, we are offering Loctite Vibra-Seal on all of our parts that have male pipe threads. Factory applied Loctite for external pipe threads may be ordered for steel parts by adding the prefix "307-" to the completed part number, and dropping suffix "S" if the part number begins with a numeral.  
Example: 307-2021-8-8.

If the part number begins with an alpha character, add the suffix "-307" to the completed part number and drop the suffix "S".  
Example: FF2031T0606-307.

™ Loctite is a trademark of Henkel Corporation.

## ORS-TF tube fittings

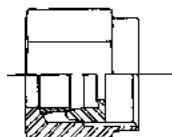

The ORS-TF tube fitting utilizing the ORS-TF nut, ferrule and sleeve can be joined directly to steel tubing to solve your fluid leakage problems. It does not require the time and expense of brazing and provides the advantage of repetitive reuse. It is a compression type fitting that works on a variety of tubing.

### CAUTION

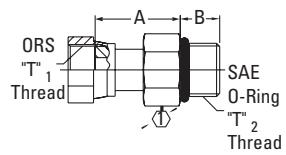

In applications exceeding +480°F (such as during brazing) order the oil-coated/non-plated nut by using part number FC1857-Size-186. When plating is heated above +480°F, toxic gases are given off.

## SAE split flange to 37° flare

### Split flange/37° flare SAE

Standard pressure series (Code 61)

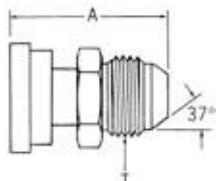

#### Part no. 500025-(Dash size) (mates with 449-74446 flanges)

The performance rating of these adapters is the lower of the two terminal ends. These adapters are rated to JIC pressures as specified in SAE J514.

Dash size	Split flange size	Tube O.D.		Thread T	A	
		mm	in		mm	in
8S	1/2	12,7	0.50	3/4-16	42,2	1.66

\*Length required to insert adapter at installation.

†Ordering Information: Eaton Restrictor Adapters are available in orifice sizes from 0.60 to 0.25 inches.

When ordering restrictor adapters, it is important to indicate the drill size required.

For example: For a 0.125 drill size in FF1980-0404 adapter, order as FF1980-125-0404.

If you indicate the desired orifice size in inches, the appropriate 3 digit number will be assigned.

## Restrictor 37° male flare/37° female

Part no. FF1981-(Dash size)†

Dash size	Tube O.D.		Thread T1	Thread T2	A		B*	
	mm	in			mm	in	mm	in
0404	6,3	0.25	7/16-20	7/16-20	28,9	1.14	17,5	0.69
0606	9,6	0.38	9/16-18	9/16-18	30,2	1.19	18,3	0.72
0808	12,7	0.50	3/4-16	3/4-16	34,5	1.36	25,6	1.01

\*Length required to insert adapter at installation.

†Ordering Information: Eaton Restrictor Adapters are available in orifice sizes from 0.60 to 0.25 inches.

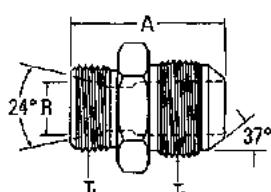

When ordering restrictor adapters, it is important to indicate the drill size required.

For example: For a 0.125 drill size in FF1980-0404 adapter, order as FF1980-125-0404.

If you indicate the desired orifice size in inches, the appropriate 3 digit number will be assigned.

## Stainless steel adapters

Eaton stainless steel adapters are manufactured from 316 stainless steel for excellent corrosive resistance. All parts meet dimensional and performance requirements of SAE J514.

Additionally, all parts are passivated after machining to increase corrosive protection.

### Applications:

- Marine/Military
- Chemical processing
- Pulp and paper industry
- Food and beverage processing
- Off-Shore drilling

**Note:** Stainless steel threaded products are susceptible to galling. Sealing surfaces and threads may be severely damaged due to the high pressure associated with assembly. It is recommended that a high-pressure lubricant be used to prevent galling.

## Torque requirements

**Typical application**

Hydraulic, instrumentation and chemical processing systems.  
Highly recommended for high pressure applications

**Pressure**

Operating pressure up to 10,000 psi depending on tube and fitting size. See steel fittings recommendations, page J-111

**Vibration**

Excellent resistance

**Temperature range**

-65°F to +400°F (-53°C to +204°C) at maximum operating pressures. Has been used at 800°F and 1000 psi to 4000 psi depending on tube size.

**Material**

Carbon Steel Plating - Zinc Trivalent

**Advantages**

An excellent high pressure fitting - NO TUBE FLARING. Used with extra heavy wall tubing. Broad selection of sizes and styles

**Conformance**

Meets specifications and standards of ASME and SAE

**How to order**

For complete assembly (body, nut sleeve) order individually by part number. Example: 7205x4. To order body only (less nut and sleeve), prefix the part number with the letter E. Example: B7205X4. Nuts and sleeves can be ordered separately by part number

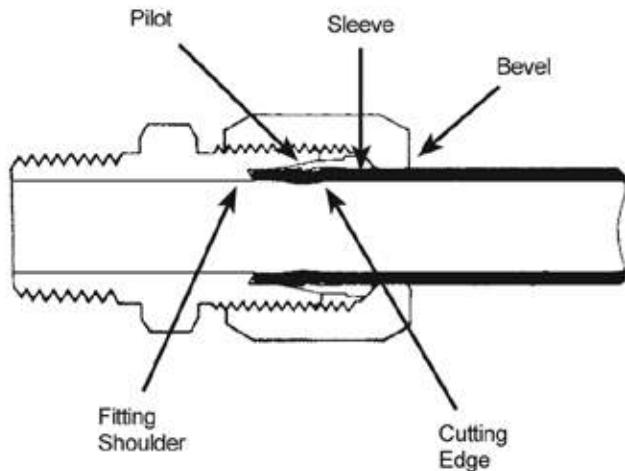

# Adapters and tube fittings

## 7000 series Ermeto fittings

J

### 7000 series Ermeto fittings

Ermeto fittings (7000 Series) are especially designed for making leak-proof tube connections. This fitting will effectively withstand high pressure, severe vibration and extreme temperature. No special tools are needed for assembly. Simply cut tube square, preset sleeve on tubing and assemble.

#### Ermeto design principle provides positive seal

1. In presetting, as the nut is tightened it forces the sleeve forward into the body taper. See page J-109 for preset instructions.
2. Pilot of sleeve contracts, forcing the cutting edge of sleeve to shear a groove into outer surface of the tube, making a tight joint between fitting and tube.
3. In assembling the preset sleeve and tube into the fitting body, the nut presses on the bevel at rear of sleeve causing it to clamp tightly to the tube. Resistance to vibration is concentrated at this point rather than at the sleeve cut.
4. When fully tightened, the case hardened sleeve is bowed slightly at the midsection and acts as a spring. This spring action of the sleeve maintains a constant tension between the body and the nut, and thus prevents the nut from loosening.
5. After the first assembly, the sleeve is permanently attached to the tube. Disassembly and reassembly of the fitting can be made without loss of strength or sealing qualities.

In general, the "bite-action" of the sleeves in any given material varies as shown in the following table:

#### 7000 series fittings

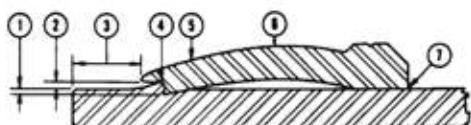

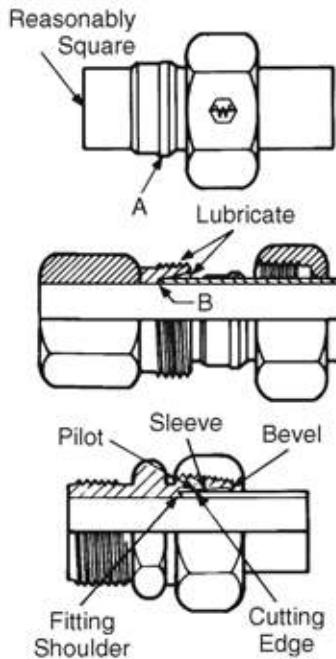

Specifically designed to meet all SAE approved standards for hydraulic flareless tube fittings. Available in a complete range of standard body styles.

#### Carbon steel 7000 series

Eaton Ermeto fittings have a zinc trivalent finish, which fully resists the effects of nonflammable hydraulic fluids.

"7000" series sleeve	Sleeve material	Tubing used 303 to 316 Stainless and Cupro-Nickel	"Bite-action"
7165	Heat treated carbon steel (standard carbon)	Fully annealed to 1/8 hard	Excellent

## 7000 series Ermeto fittings Assembly instructions

### Presetting operation

#### Preset with preset tool:

1. Slide nut and then sleeve on tube. Shoulder of sleeve "A" must be toward nut.
2. Insert tube into presetting tool. Be sure that tube is bottomed on fitting tube stop at point "B". Lubricate threads, seat of fitting and shoulder of sleeve with good grade of lubricant.
3. Turn nut slowly with wrench while turning tube with other hand. When the sleeve grips the tube, that is, when the tube can no longer be turned by hand - STOP - and note the position of the wrench. This is the "Ring Grip" point.
4. Tighten nut an additional number of turns past the ring grip point per tube size and wall thickness as shown in Table 1, page J-110.
5. Disassemble from preset tool.

#### Preset in fitting body:

Follow same procedure as when presetting with preset tool. Once the fitting nut has been turned the proper number of turns past ring grip, the fitting assembly is complete and ready for use.

### Fitting installation

1. After sleeve and nut have been preset on the tubing and checked as described, the assembly is ready for installation into the Ermeto fitting seat.
2. Lubricate threads, seat of fitting and shoulder of sleeve with a good grade of lubricant compatible with system fluid.
3. Insert tube assembly into fitting and tighten nut until sharp rise in torque is felt.
4. Starting at the position of sharp torque rise, tighten nut 1/4 turn to complete assembly.

#### When the assembly procedure for Ermeto fittings is followed correctly, these points will be evident:

1. Cutting edge of sleeve will be imbedded in tubing to its full depth.
2. Pilot edge of sleeve should be close to or touching O.D. of tubing.
3. Distance between end of tube and leading or pilot edge of sleeve will be at least 1/8".
4. Metal will be piled ahead of cutting edge of sleeve under pilot.
5. Contact area of sleeve will show evidence of being in perfect contact with tapered seat of fitting.
6. Sleeve will show evidence of being bowed within its elastic limits.
7. Back of sleeve will be in contact with tube.

**Note:** Performance of fitting will not be affected if sleeve rotates on tube after disassembly.

### For re-installation of fitting after disassembly

1. Insert tube assembly into fitting, tighten nut until a sharp rise in torque is felt.
2. Starting at the position of sharp torque rise, tighten nut 1/4 turn to complete the reinstallation.

### Ermeto hand presetting tools 7000 series

Presetting tools provide a more accurate and positive leak-proof method of coupling flareless fittings. Presetting steel Ermeto sleeves on tubing prior to fitting assembly will permit the maximum high performance obtainable with flareless fittings.

### Metric flareless hand presetting tools

Presetting tools provide a more accurate and positive leak-proof method of coupling flareless fittings. Presetting the steel metric sleeves prior to fitting assembly will permit the maximum high performance obtainable with flareless fittings. These tools are available for the Light (DIN 3901/3902L) flareless series.

## Ermeto flareless fittings

### Hydraulic pressure data

Ermeto fittings have been used with success on many and varied applications far exceeding the conservative conditions presented below. Specifically:

- Temperatures up to 800°F in carbon steel have been handled without failure
- Burst pressures up to 32,000 psi with 1/4" tubing
- Vibration conditions of 1/8" off-center amplitude with 12" overhang in 1/4" tubing have been withstood at rated operating pressure with 4-to-1 safety factors for over ten million cycles

Obviously under extreme conditions of pressure, temperature and/or vibration, the safety factor is proportionately reduced.

The Ermeto flareless fitting is the ultimate hydraulic fitting available today. Special performance conditions as outlined can be accommodated; however, it is recommended that your local Eaton representative be consulted for engineering assistance prior to finalizing design.

The values shown in the following table are pressure ratings of Ermeto flareless fittings under various surge conditions. They apply and are recommended for conservative operating conditions.

Size no.	Size in inches	Maximum pressure † No surges PSI	Maximum pressure † With surges to 50%	Maximum pressure † With surges of 50% to 100%	Maximum pressure † With surges to 150%
2	1/8	10,000	6,500	5,000	4,000
3	3/16	9,000	6,000	4,500	3,600
4	1/4	8,000	5,250	4,000	3,200
5	5/16	8,000	5,250	4,000	3,200
6	3/8	7,500	5,000	3,750	3,000
8	1/2	7,000	4,500	3,500	2,700

**K**

## Accessories

Protective coils, sleeves

K

**900564**  
**Steel protective  
coil spring**

Protects hose cover and reinforcement from abrasion and accidental damage.  
Construction: steel wire, rust resistant.  
This coil should fit snugly to the hose O.D. expanding the coil I.D. (unwind the coil) may be necessary for proper installation.

**900705**  
**Steel protective  
coil sleeve**

Recommended for use where hose lines are subjected to excessive abrasion, kinking or accidental damage.  
Construction: spring steel, rust resistant.  
This coil should fit snugly to the hose O.D. expanding the coil I.D. (unwind the coil) may be necessary for proper installation.

**900952**  
**Plastic protective  
coil spring**

Recommended to protect hose from abrasion, this light weight plastic sleeve is unaffected by air, water, oil, gasoline, hydraulic and most other fluids. This coil can also be used for group bundling of hose lines.  
Temperature range of 0°F to +180°F.

**222005\*, 222022**  
**Stainless steel internal  
support coils**

Recommended for vacuum service with most hose.

**For use with hose:  
see pages K-8-K-14**

## FF90754

### Guardian sleeve

Eaton's new Guardian Sleeve is designed to provide protection against hydraulic hose failure by containing pressure and fluids that may escape during a hose burst or pinhole leak.

Properties	Specification	Description
Burst pressure	16,000 psi	Capable to contain hose burst up to 16,000 psi
Pin hole leak pressure	4,000 psi	Sustained 4,000 psi pin hole deflection from focused 1mm pin hole
Abrasion cycles	250,000 psi	Holds up to 250,000 abrasion cycles per ISO 6945

**Denier:** 1260

**Melting Point:** 215°C/420°F

**Material:** Polyamide 6, made with pre-dyed yarn

**Dim. Stability:** Great resistance to sun, atmospheric agents and aging

**Toxicity:** Non-Toxic

**Color:** Black

**Packing Requirements:** Eaton Guardian Sleeve comes in a 300 foot roll with no more than 3 cuts per roll and no piece shorter than 30 feet. Note must be ordered by the roll.

### Guardian sleeve chemical compatibility

Chemical	Compatibility
Gasoline	Very Good
Oil	Very Good
Mineral and Vegetable Oil	Very Good
Ionic Metallic Solutions	Very Good
Alcohols	Very Good
Diluted Bases	Very Good
Diluted acids *	Good
Benzene Very	Good
Acetone	Very Good
Ether	Very Good
Carbon Tetrachloride	Very Good
Chlorine Based Solvent	Very Good
Mold, Bacteria, Moths	Very Good

\*Strong and concentrated acids; ie. HCl or Formic Acid may have some corrosive action.

### Assembly Instructions

1. Select the correct sleeve part number for the hose.
2. Cut the sleeve 2 inches longer than the cut length of the hose to allow full hose bend radius.
3. The ends of the sleeves must be seared to prevent sleeve from fraying.
4. Slide the sleeve over the hose.
5. Properly assemble the hose ends.
6. Secure the sleeve over hose sockets with a metal banding product.

**900729****Support clamp**

These lightweight vinyl-coated steel support clamps are designed to support hose where long runs are necessary.

This clamp not only furnishes a cleaner installation, but prevents damage, exposure and chafing.

The lining will withstand high ambient temperatures.

**Bolt hole dia:** Clamp dash no. -01 thru -8, -18 thru -23 is .406; -9 thru -17, -24 thru -31 is .531.

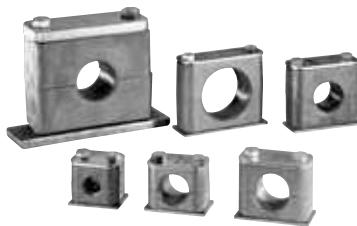

For use with hose: see pages K-8-K-14

**FF90311****Heavy duty hose support clamps**

These heavy duty weld-based clamps are designed to securely hold hose in applications subject to impulsing, flexing and vibrating conditions. The clamps help prevent abrasion and extend hose life through proper routing. Clamps are rated to ambient temperature of +250°F.

For use with hose: see pages K-8-K-14

## Accessories

### Hose protectors

#### HP4, HP6, HP8 and HPM

##### Hose protectors

Easy installation in minutes – no need to remove hose, formulated to resist solvents, oils, grease and gasoline.

Part number	Description
HP4*	4" Hose Protector Case of 50
HP6*	6" Hose Protector Case of 50
HP8*	8" Hose Protector Case of 50
HPM*	Mixed Hose Protectors Case of 60

##### Features:

- Operating temperature range is -40° to 430°F.
- Exceptionally cost effective
- Packed in easy to assemble, colorful, counter display box
- Available in 3 sizes – 4", 6" and 8" – cable ties included

##### Market applications:

- Farming
- Industrial
- Trucking
- Mining
- Construction
- Aviation support
- Road maintenance
- Waste management
- Original equip. manuf.

#### HSM-48

##### Hose spacers

Part number	Description
HSM-48	Case of 48 mixed Hose Spacers

##### Features:

- Prevents hose abrasion at points of contact
- Helps keep hoses organized Prevents damage from unrestrained hoses
- Available in 4 sizes – 3/4", 1", 1-1/8", 1-3/8"
- Packed in colorful counter display boxes of 48 – cable ties included
- Also available in mixed boxes of 48 (12 each size) or refill bags of 12

#### FF90308

##### Hose insertion gages

Improve hose assembly reliability with these easy to use aluminum gages that are designed to ensure proper fitting depth during pre-assembly.

Simply bottom the hose in the appropriately marked cavity and scribe a mark on the hose flush with the top surface of the gauge. Insert the fitting until the back of the socket is aligned with scribe line.

For use with all hoses that mate with TTC, TTC12 and Global Spiral TTC fittings

##### For use with hose: see pages 300-308.

Part number	Usage
FF90308-01	For use with all hoses that mate with -4 through -16 TTC and TTC12 fittings
FF90308-02	For use with all hoses that mate with -20 through -32 TTC and TTC 12 fittings
FF90308-03	For use with all hoses that mate with -12, -16, -20 Spiral TTC fittings
FF90308-04	For use with all hoses that mate with -06, -08, -10, -12, -16 spiral 4S/6S fittings
FF90308-05	For use with all hoses that mate with -20, -24, -32 spiral 4S/6S fittings

#### HLM-48

##### Hose looms

Part number	Description
HLM-48	Case of 48 mixed Hose Looms

##### Features:

- Prevents hose abrasion at points of contact
- Keeps multiple hoses organized
- Simplifies hose routing
- Prevents damage from unrestrained hoses
- Available in 4 sizes – 3/4", 1", 1-1/8", 1-3/8"
- Packed in colorful counter display boxes of 48
- Also available in mixed boxes of 48 (12 each size) or refill bags of 12

## Flaretite® seals

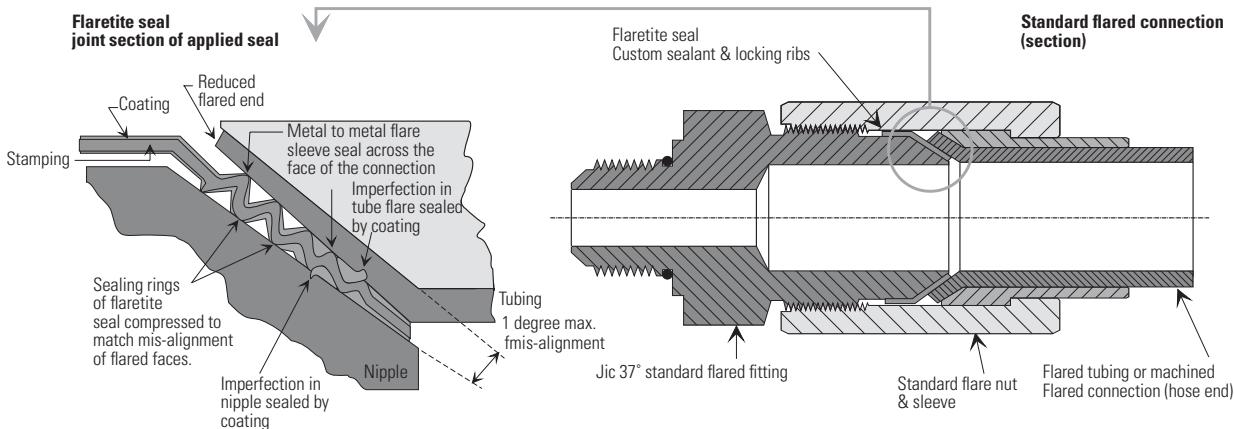

The ideal product to enhance new installations of SAE 37° connections, as well as seal off minor leaks and weeping connections.

### Features

- Ribbed insert design
- Coated with Loctite® sealant
- Economical method to reduce minor leaks and weeping connections
- Built-in clip to attach the Flaretite seal to the nose of the SAE 37 degree connection
- Available sizes: -04 through -32

### Benefits

- Multiple surface contact points
- Locks the joint and fills surface imperfections
- Saves time & money associated with maintenance and rework
- Quick & easy assembly

Seal size	Package part number	Number of seals per package
-04	FF13267	100
-06	FF13268	100
-08	FF13269	100
-10	FF13270	100
-12	FF13271	100
-16	FF13272	50
-20	FF13273	50
-24	FF13570	25
-32	FF13571	10

### Assembly and torque requirements

To assemble an SAE 37° connection using a Flaretite seal, simply push the Flaretite seal onto the male portion of the connection. The built-in clip will hold the Flaretite seal onto the male half.

During assembly ensure:

- The seal is fitted squarely to the conical nose of the JIC fitting -37° flare.
- The sealing faces of the flared connector part are clean and free of burrs.
- The flared joint is correctly tightened with recommended torque settings noted below.

### Recommended torque settings:

Tolerance: +10% -0%

-04 (1/4")	SAE 37°: 14lb-ft.	-10 (5/8")	SAE 37°: 80lb-ft.	-20 (1-1/4")	SAE 37°: 190lb-ft.
-06 (3/8")	SAE 37°: 26lb-ft.	-12 (3/4")	SAE 37°: 110lb-ft.	-24 (1-1/2")	SAE 37°: 220lb-ft.
-08 (1/2")	SAE 37°: 55lb-ft.	-16 (1")	SAE 37°: 140lb-ft.	-32 (2")	SAE 37°: 325lb-ft.

# Assembly equipment

## Hose assembly cell setup options

This package contains five options for hose assembly cell setup. Any of the equipment listed in the options can be mixed and matched to suit specific needs.

### Option 1

#### Mobile hose assembly cell

This option will allow crimping of 2 wire braided hydraulic hoses ranging in size from -04 to -20, and 4 spiral hydraulic hoses ranging in size from -06 to -16.

Estimated maximum production capability – Up to 40 pcs/hr

Category	Part number	Comments
<b>Hose preparation</b>		
Hose saws	ET9100-07-XX or ET920010-XX	XX depending on power source. 12/24 DC available in ET9200 series
<b>Hose assembly</b>		
Portable crimper Swager Assembly cleaning system	ET1187 Mark IX FT1455-K1	Small hose diameter cleaning kit (1/4" thru 1 1/4" FT1455-L1 launcher, 7 hose nozzles, case, ET1455-QC coupling)
<b>Post assembly</b>		
Capping machine	FT1555-HH-K1	Hand held electric heat gun, case, flex stand, 1 1/2" diffuser

### Option 2

#### Small hose assembly cell

This option will allow crimping of 2 wire braided hydraulic hoses ranging in size from -04 to -32, and 4 spiral hydraulic hoses ranging in size from -06 to -20.

Estimated maximum production capability – Up to 40 pcs/hr

Category	Part number	Comments
<b>Hose preparation</b>		
Hose saws Skiving machine	ET9200-10-XX FT1229-100-XX, FT1230-100-XX, FT1229-2-3, FT1229-3-4, FT1231-100-XX, FT1240-100-XX & FT1240-150-XX	XX depending on power source XX is the hose size
<b>Hose assembly</b>		
Bench top crimper Swager Assembly cleaning system	ET1187 FT1380 Mark IX FT1455-K3	Medium hose diameter cleaning Kit (1/4" thru 2", UC-HL2 launcher, 9 hose nozzles, case, QRC-C coupling, AR-1 adapter ring)
<b>Post assembly</b>		
Proof test table Capping machine	FT1058 FT1555-HH-K1 & FT1555-HH-D20	Up to 2" hoses FT1555-HH-K1 & 2" diffuser for hand held electric heat gun

This package contains five options for hose assembly cell setup. Any of the equipment listed in the options can be mixed and matched to suit specific needs.

### Option 3

#### Small to medium hose assembly cell

This option will allow crimping of 2 wire braided hydraulic hoses ranging in size from -04 to -48, and 4 spiral hydraulic hoses ranging in size from -06 to -32 (including die set for 1W Fittings).

Estimated maximum production capability – Up to 70 pcs/hr (higher possible with multiple operator setup).

Category	Part number	Comments
<b>Hose preparation</b>		
Hose saws Skiving machine	ET9200-07-XX & ET9300-14-XX FT1229-100-XX, FT1230-100-XX, FT1229-2-3, FT1229-3-4, FT1231-100-XX, FT1240-100-XX & FT1240-150-XX	XX depending on power source XX is the hose size
<b>Hose assembly</b>		
Bench top crimper Pre-programmed crimper Swager Assembly cleaning system	FT1380 ET5040 Mark IX FT1455-K5	Large hose diameter cleaning kit (1/4" thru 4 1/2", nozzles, case, brass coupling, 2 adapter rings & locking ring)
<b>Post assembly</b>		
Proof test table Capping machine	FT1312 FT1555-BM	Up to 2" Bench mount production heat shrink machine with timer

This package contains five options for hose assembly cell setup. Any of the equipment listed in the options can be mixed and matched to suit specific needs.

#### Option 4

#### Medium to large serial production hose assembly cell

This option will allow crimping of 2 wire braided hydraulic hoses ranging in size from -04 to -48, and 4 Spiral hydraulic hoses ranging in size from -06 to -32 (including die set for 1W Fittings). Add LifeSense® hose preparation capability. Limited industrial and specialty hose crimping capability up to 6".

Estimated maximum production capability - Up to 100 pcs/hr (higher possible with multiple operator setup).

Category	Part number	Comments
<b>Hose preparation</b>	Hose saws	XX based on voltage. ET9300 can cut only up to 5" industrial hose. Need ET9X00-XX-D diamond blade for big 6 spirals
	Skiving machine	FT1229-100-XX, FT1230-100-XX, FT1229-2-3, FT1229-3-4, FT1231-100-XX, FT1240-100-XX & FT1240-150-XX  XX is the hose size
	LifeSense® preparation	6" x 48" sander with guard and ET0100-005
<b>Hose assembly</b>	FT1380/FT1390 ET5040/ET5050  Mark IX ET1455-L4 & ET1455-K5	Small hose diameter bench mount cleaning kit (1/4" thru 1 1/4" bench mount launcher with 7 hose nozzles) & large hose diameter cleaning kit (1/4" thru 4 1/2", nozzles, case, brass coupling, 2 adapter rings & locking ring)
<b>Post assembly</b>	Proof test table Capping machine	Bench mount production heat shrink machine with timer. Produces 50 ft lengths, for hoses up to 2"

This package contains five options for hose assembly cell setup. Any of the equipment listed in the options can be mixed and matched to suit specific needs.

#### Option 5

#### Large serial production hose assembly cell

This option will allow crimping of 2 wire braided hydraulic hoses ranging in size from -04 to -48, and 4 Spiral hydraulic hoses ranging in size from -06 to -32 (including die set for 1W Fittings). Adds LifeSense® hose preparation capability. Limited industrial and specialty hose crimping capability up to 10".

Estimated maximum production capability - Up to 100 pcs/hr (higher possible with multiple operator setup).

Category	Part number	Comments
<b>Hose preparation</b>	Hose saws	XX based on voltage. ET9300 can cut only up to 5" industrial hose. Need ET9X00-XX-D diamond blade for big 6 spirals

## Variable crimp machine – Portable

**ET1187-001**

Bench Mount

**ET1187-002**

Truck Mount

### Specifications

Dimensions: 22" High x 9" Wide x 11" Deep

Weight – 65 lbs

Available with bench and truck mount brackets

- Aeroquip TTC series braided fittings and applicable hoses in sizes 1/4" through 1-1/4"
- Aeroquip 4S/TTC12 series spiral fittings and applicable hoses in sizes 3/8" through 1"
- Eaton Winner two-piece braided fittings and applicable hoses in sizes 1/4" through 1-1/4"

### Features

- Can be mounted on service vehicles or bench tops
- Can be used remotely, 65lbs
- Can be powered with virtually any 10,000 psi hydraulic power source (minimum of 36 cu. inch pump reservoir capacity is required)
- Utilizes existing FT1380 dies

### Benefits

- Color coded collar for core hose products makes setup fast and easy
- Easily transported between job sites
- Versatile power source options
- Lower investment cost than other variable crimpers

**NEW!** While being our most economical variable crimp machine to date, the new ET1187 machine boasts a broad crimp capability with a new "ease-of-use" that is sure to please hose assemblers in the field.

### Crimp machine part numbers

ET1187-001	Bench Mount Machine, no pump, no tooling (includes bracket)
ET1187-002	Truck Mount Machine, no pump, no tooling (includes bracket)
ET1187C-0017	Bench Mount Bracket (separate)
ET1187C-0019	Truck Mount Bracket (separate)

### Pump part numbers\*

ET1000PK-001	2-Stage Hand Pump
ET1000PK-002	Air/Hydraulic Pump
ET1000PK-003	110 Volt Electric Pump
ET1000PK-004	12 Volt DC Electric Pump

\* These pump kits include the pump, connecting hose assembly, and all of the adapters necessary to connect the pump to the ET1187 crimp machine.

### Accessory part numbers

T-400-G	1.5 oz. Tube, High Efficiency PTFE Grease
FF91455	16 oz. Can, High Efficiency PTFE Grease

Die Cage Part Number	1 Wire Braid TTC/Winner	2 Wire Braid TTC/Winner	Spiral Hose 4S Fitting	Spiral Hose TTC12 Fitting	ET4020TP-0002
FT1380-200-M150	-4	-4			X
FT1380-200-M180	-6	-4 <sup>t</sup>			X

FT1380-200-M370	-16	-16			X
FT1380-200-M420			-16	-16	
FT1382-200-M465	-20	-20	-20	-20	

<sup>t</sup> - Die cage used to crimp Winner hose with two piece Winner fitting.

<sup>††</sup> - Die cage used to crimp Winner hose with 4S fitting. **Note:** Additional dies and die cage assemblies also available. Refer to website or contact Eaton.

## Variable crimp machines

### ProCrimp® FT1380

#### Ordering instructions

**FT1380-115** 115V crimp machine 50/60 Hz

#### Electrical requirements

**USA:** FT1380-115 standard machine uses 115V, 50/60 Hz, 1.5 hp

**Brazil:** FT1380-1-2 standard machine uses 230V, 50/60 Hz, 1.5 hp

**Australia:** FT1380-230 standard machine uses 230V, 50/60 Hz, 1.5 hp

**Canada:** FT1380-115 standard machine. Requires CSA (Canadian Standards Association) approval. The FT1380-115 is CSA approved and is so noted on the nameplate.

The ProCrimp® 1380 crimp machine from Eaton crimps all your hose needs up to and including -20 SAE100R15 hose styles and the popular MatchMate Plus hose and fittings program (shown with optional die holder kit FT1380-2-4).

The ProCrimp® 1380 is electronically controlled to give fast, accurate crimps the first time and every time you need a hose assembly. The electronic keypad is easy to adjust, with up to 10 programmable crimp settings. For hose styles and sizes used less frequently simply enter the 3 digit code of that hose.

#### Accessory part numbers

FT1380-2-3	FT1330 to FT1380 Die cage conversion kit — back plate, bolts and instructions necessary to convert an FT1330 die cage to an FT1380 die cage. Simply remove the FT1330 back plate and replace it with the new FT1380 back plate.
FT1380-2-4	Optional die holder kit — Kit includes 4 die holder plates each of which will hold 2 die cages. Holes are pre-drilled on base of ProCrimp machine to accept these 4 plates.
FT1380-4	Optional fitting backstop—Kit includes backstop and 5/32" hex wrench. The backstop allows the 1380 to crimp PTFE hose and be utilized for a fitting locator to increase efficiency.

Die Cage Part Number	1 Wire Braid TTC/Winner	2 Wire Braid TTC/Winner	Spiral Hose 4S Fitting	Spiral Hose TTC12 Fitting	ET4020TP-0003
FT1380-200-M150	-4	-4			X

## Hose assembly crimp machines

### Variable crimp machines

#### ET1280 Crimp machine

The ET1280 machine boasts a broad crimp capability with an ease-of-use that is sure to please hose assemblers. The ET1280 will handle virtually all hose styles through -20 SAE100R13 hose and fittings. All die cages, crimp diameters and approved hose and fitting combinations are identical to the popular FT1380 & ET1187 crimp machines.

#### Two configurations

The adjustable model allows the machine to be oriented to the preferred angle that the operator desires. This adjustable model may be ordered separately or with your choice of three power options, including a high volume hand pump, a turbo air/hydraulic power unit or a 12-volt DC power unit.

The upright model comes standard with a work light and a 110-volt, 50/60 Hz, 1.5 HP electric power unit.

#### Ordering instructions

- ET1280-001** Machine base, no pump, no tooling  
**ET1280-005** 110 volt, 1 1/2 HP electric pump, no tooling (upright model)

#### Separate pump options

FT1310-2-9	12 VDC Pump
FT1380P-2-2	2-Stage hand pump
T-480-3	Turbo air/hydraulic pump

#### Tool packages

Die Cage Part Number	1 Wire Braid TTC/Winner	2 Wire Braid TTC/Winner	Spiral Hose 4S Fitting	Spiral Hose TTC12 Fitting	ET4020TP-0003
FT1380-200-M150	-4	-4			X
FT1380-200-M180	-6	-4 <sup>t</sup>			X
FT1380-200-M210	-8	-6	-6	-6	X

FT1380-200-M420			-16	-16	X
FT1382-200-M465	-20	-20	-20	-20	X

<sup>t</sup> - Die cage used to crimp designated hose diameter with two piece Winner fitting.

<sup>tt</sup> - Die cage used to crimp Winner hose with 4S fitting

**Note:** Additional dies and die cage assemblies also available. Refer to website or contact Eaton.

## Variable crimp machines

### ProCrimp® FT1390

#### Crimp assembly machine

All styles from 3/16" through 2" I.D. including four and six spiral wire requiring internal skive crimp style fittings.

#### Features

- Front-end loading design
- Electronic key pad control of crimp diameter
- Power return stroke, return limit control
- Drop-in tooling (crimp die cages)
- Backstop fitting locator
- Width 29", Depth 28", Height 49", Weight 825 lbs.
- Worklamp

#### Ordering instructions

<b>FT1390-115</b>	Aeroquip crimp machine, 115V, single phase, 50/60 Hz, 1 hp motor
<b>FT1092</b>	Never-seez lubricant

#### Optional 230 volt machines

<b>FT1390-23050</b>	230V single phase, 50/60 Hz crimp machine
<b>FT1390-23060</b>	230V, single phase, 50/60 Hz crimp machine

#### Crimp die cages

Eaton crimp die cages provide simple "drop-in" tooling for the FT1390 crimp machine. See Crimp Die Cage Applications chart or contact Eaton. Refer to website for current crimp specifications.

#### Crimp die cage storage cabinet

**FT1283** Eaton recommends crimp die cages be kept free of dust or dirt. As an option, a cabinet is offered which has the capability of storing nine crimp die cages.

### FT1330-XL

#### MatchMate Plus fitting locators

For use with FT1380 and FT1330 "M" Series die cages

Consistent crimping of MatchMate Plus fittings is greatly simplified when using new fitting locators.

The locators are designed for easy installation and use on the Eaton FT1380 or FT1330 "M" series die cages noted below.

#### Locator kit - ordering instructions

The locator kits can be ordered as part number FT1330-XL. Each kit contains locators to accommodate -4, -6, -8, -10, -12 and -16 MatchMate Plus fittings and installation instructions.

<b>Locator suffix</b>	<b>Die cage suffix</b>	<b>MatchMate Plus hoses</b>

### Crimp cages for FT1380

#### M-Series crimp die cage applications

Die cage	Crimp range	
Part number	mm	in
FT1380-275-M070	7,0 to 9,0	0.28 to 0.35
FT1380-275-M090	9,0 to 12,0	0.35 to 0.47
FT1380-275-M120	12,0 to 15,0	0.47 to 0.59
FT1380-275-M150 <sup>t</sup>	15,0 to 18,0	0.59 to 0.71
FT1380-275-M180 <sup>t</sup>	18,0 to 21,0	0.71 to 0.83
FT1380-275-M210 <sup>t</sup>	21,0 to 24,0	0.83 to 0.95
FT1380-275-M240 <sup>t</sup>	24,0 to 28,0	0.95 to 1.10
FT1381-200-M280	28,0 to 32,0	1.10 to 1.26
FT1380-275-M320 <sup>t</sup>	32,0 to 37,0	1.26 to 1.46
FT1380-275-M370	37,0 to 42,0	1.46 to 1.66
FT1380-275-M420	42,0 to 46,5	1.66 to 1.83
FT1382-275-M465	46,5 to 52,0	1.83 to 2.05

<sup>t</sup>: Can be ordered as FT1380-200-SIZE for powdered metal dies vs. tool steel dies.

NOTE: Additional dies and die cage assemblies also available. Refer to website or contact Eaton.

#### Hose styles

- Smooth Bore PTFE
- SAE100R1AT
- SAE100R2AT
- HI-PAC
- SAE100R6
- SAE100R8
- SAE100R12
- SAE100R17
- Convoluted PTFE
- SAE100R1
- SAE100R2A
- SAE100R4
- SAE100R7
- Thermoplastic

**Note:** For crimp specifications on Global Skive type fittings and Global TTC & TTC12 refer to website or contact Eaton for specialty hoses.

#### Barrel crimp die cage applications

Die cage	Hose size		Hose styles
Part number	-04	-05	SAE100R5

## Crimp cages for FT1390

**FT1307-200-size, FT1209-200-size & FT1390-200-size die cages can be used in the FT1390 crimp machine.**

Die cage part number	Crimp range	
	mm	in
FT1307-200-M070	7,0 to 9,0	0.28 to 0.35
FT1307-200-M090	9,0 to 12,0	0.35 to 0.47
FT1307-200-M120	12,0 to 15,0	0.47 to 0.59
FT1307-200-M150	15,0 to 18,0	0.59 to 0.71
FT1307-200-M180	18,0 to 21,0	0.71 to 0.83
FT1307-200-M210	21,0 to 24,0	0.83 to 0.95
FT1307-200-M240	24,0 to 28,0	0.95 to 1.10
FT1307-200-M280	28,0 to 32,0	1.10 to 1.26
FT1307-200-M320	32,0 to 37,0	1.26 to 1.46
FT1307-200-M370	37,0 to 42,0	1.46 to 1.66
FT1307-200-M420	42,0 to 46,5	1.66 to 1.83
FT1307-200-M465	46,5 to 52,0	1.83 to 2.05
FT1307-200-M520	52,0 to 55,0	2.05 to 2.17
FT1307-200-M550	55,0 to 69,0	2.17 to 2.71
FT1307-200-M690	69,0 to 73,0	2.72 to 2.87

Note: Additional dies and die cage assemblies also available. Refer to website or contact Eaton.

Note: FT1209-200-size & FT1390-200-size are for use with internal skive and 4S/6S fittings (SAE100R11 & SAE100R13 hose styles).

Note: FT1390-200-size dies cages are hinged to allow ease of use when crimping large elbows.

### Hose styles

- Convoluted PTFE
- Smooth Bore PTFE
- Thermoplastic
- SAE100R1
- SAE100R2A
- HI-PAC
- SAE100R6
- SAE100R8
- SAE100R7
- SAE100R12

Note: For crimp specifications on Global skive type fittings and Global TTC, TTC12, Winner two-piece and 4S/6S refer to website or contact Eaton for specialty hoses.

## Barrel crimp die cage applications

## Hose assembly crimp machines

### Programmable crimp machines

#### ET5040

The ET5040 is pre-programmed with all of Eaton's hose and hose fitting crimp specifications, crimp profile details, and machine settings in order to crimp to the required specifications.

#### Crimp capacity

Spiral hose:  
up to 2" (DN51)  
  
Braided hose:  
up to 3" (DN80)  
  
Industrial hose:  
up to 4" (DN102)\*

#### Mounting

Free standing with adjustable telescoping legs

Shipped without oil in the reservoir. Approved oil must be added prior to operation.

#### Size

Legs fully extended: 52"  
(1321 mm) high  
  
Legs fully retracted" 36"  
(914 mm) high  
(centerline of crimp head)

#### Crimp force

280 ton (2800 KN)

#### Reservoir capacity

13.2 gallons (50 liters)

#### Hydraulic oil

Industrial grade HM or HV46  
ISO 6743/4

**Total weight** (without mounting rack & dies)  
1,047 lbs (475 Kg)

#### Available power options

230V 3 Phase 50/60 Hz  
380V 3 Phase 50/60 Hz  
400V 3 Phase 50/60 Hz  
420V 3 Phase 50/60 Hz  
440V 3 Phase 50/60 Hz  
460V 3 Phase 50/60 Hz  
480V 3 Phase 50/60 Hz

Part no.	Package description
ET5040-001-230	ET5040 230V 3 phase (50/60 Hz) crimp machine with telescoping legs (includes calibration tooling)

†Calibration tooling (supplied with all ET5040 base machines)

## Programmable crimp machines

### ET5050

The ET5050 comes pre-programmed with all of Eaton's hose and hose fitting crimp specifications, crimp profile details, and machine settings in order to crimp to Eaton's specifications.

#### Crimp capacity

Spiral hose:  
up to 2" (DN51)

Braided hose:  
up to 3" (DN80)

Industrial hose:  
up to 4" (DN102)\*

\*With master dies, selective hoses  
and fitting terminal end designs

#### Mounting

Free standing with adjustable  
telescoping legs

#### Size

Legs fully extended: 48"  
(1219 mm) high  
Legs fully retracted: 36"  
(914 mm) high  
(centerline of crimp head)

#### Crimp force

280 ton (2800 KN)

#### Reservoir capacity

32 gallons (121 liters)

#### Hydraulic oil

Industrial grade AW46  
(ISO 46) hydraulic oil

**Total weight** (without  
mounting rack and dies)  
1,851 lbs (840 Kg)

#### Available power options

230V 3 Phase 50/60 Hz

380V 3 Phase 50/60 Hz

## Dies and Kits for ET5040 and ET5050

### ET5040 DC

#### Standard die for ET5040

**Note:** Please note that ET5050 shares die crimp components and accessories with the ET5040.

For more information go to ET5050 Crimp Machine Operator's Manual E-EQCR-TT003-E

#### ET5040 Standard die part numbers

Capability of crimping Eaton hose products ranging from -3 (3/16") through -40 (2 1/2") in hydraulic hose constructions. The ET5040C-0023 kit includes the (11) most popular dies required to crimp Eaton's most common hose product lines.

The standard ET5040DC dies require the use of the **ET5040C-0001** adapter dies.

These die packages are used for hydraulic hoses and industrial hoses with a finished crimp diameter up to 3.46 in. (88mm).

Standard die set part number	Die size		Die length		Minimum		Crimp range maximum

\*Included in the ET5040-0023 standard die kit.

††Supplied with all ET5040 crimp machines and required for calibration.

Require ET5040C-0001 adapter die.

Each set includes 8 individual dies.

### ET5040C-0001

#### Adapter dies

**Note:** Please note that ET5050 shares die crimp components and accessories with the ET5040.

#### ET5040C-0001 adapter dies

Eaton adapter dies are supplied with all ET5040 base machines and are required for use with Eaton standard ET5040DC style dies. Adapter dies are inserted into the crimp head, providing proper alignment for the ET5040DC style dies. ET5040DC style dies are installed directly into the adapter die segments.

## Dies and Kits for ET5040 and ET5050

### ET5040PBL

#### Large bore die for ET5040

**Note:** Please note that ET5050 shares die crimp components and accessories with the ET5040

#### ET5040 large bore die part numbers

Capability of crimping Eaton hose products ranging up to -64 (4") in certain constructions. The large bore ET5040 dies do not require an adapter die and are inserted one segment at

a time. The large bore dies are typically used for large I.D. Eaton Industrial hose and large hydraulic hose.

# Assembly equipment

## Hose preparation

L

### ET9100, ET9200 & ET9300 Series hose saws

#### Clean Cuts • Less Smoke • Longer Life

ET9100/200/300 hydraulic hose cutting system is break-through technology using a toothed blade, cutting with the backs of each tooth, so the blade does not take a kerf. The saw bends the hose into the blade spreading the cut edges to avoid burning and smoking.

#### How it works

With the ET9100/200/300 hydraulic hose saws the hose is positioned across two pins (A) and moved into the blade (C) by a feed foot (B) using a pulldown handle for better leverage on

heavy hose. The feed motion causes the hose to stretch at the point of contact with the blade, allowing it to separate as it is cut (see image at right). This separation allows the hose to pass clear of the saw blade with NO friction, NO heating and NO DEBRIS! A vacuum hose (not shown) is attached to a vacuum port (D) to remove any tiny amount of debris or smoke during cutting. Improved safety using a 110V on/off switch (E) with a magnetic contactor. When power is lost, the saw will not turn back on independently.

**WARNING** The user must exercise extreme care when operating any Eaton assembly equipment with powered moving components. Safety glasses must be worn at all times when using any Eaton assembly equipment.

Read and understand the owners and operators manual before attempting to operate any equipment.

Eaton personnel are available to answer any questions, please call Eaton, 14615 Lone Oak Road, Eden Prairie, MN 55344, 952-937-9800. Eaton assembly equipment is designed to be used only with Aeroquip and Winner hose and Eaton hose fittings.

## Hose preparation

L

### Hose saw blades

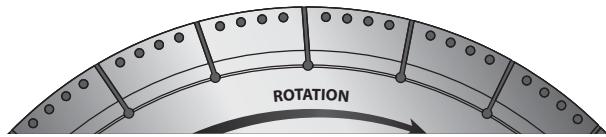

#### Advanced scalloped blades

Features advanced performance scalloped knife technology for cutting hydraulic spiral hose and wire helix hose resulting in cleaner cuts, faster cuts, no smoke, and longer blade life. Available in 6" to 14" sizes to fit Clean-Cuts™, Aeroquip®, Custom Crimp®, Gates®, Goodyear®, Imperial Eastman®, Parker®, Stratoflex®, Toledo®, and Weatherhead® saws.

#### Advanced scalloped blade

Model	Diameter	Thickness	Arbor	Eaton saw

ET9300C-14-AS	14"	0.160"	40mm	ET9300

#### Diamond hydraulic hose blades

Exclusively designed for cutting heavy 4 and 6 wire hydraulic hoses. This diamond grinding technology cuts down by 60% the debris while cutting heavy hoses very quickly as opposed to using abrasive wheels. You will get a fantastic finish and make 5 – 10 second cuts in 2" hose.

#### Diamond hydraulic hose blade

ET9300C-14-D	14"	0.160"	40mm	ET9300

#### Smooth beveled edge hydraulic hose blades

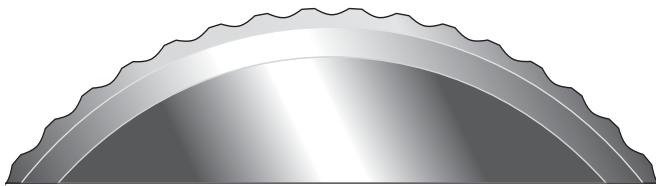

Smooth edge knife designed for the best finish when cutting light duty hoses like single wire braid, textile reinforced, poly or nylon reinforced, and Teflon® hoses.

Available in sizes 6"-14" to fit Clean-Cuts™, Aeroquip®, Custom Crimp®, Gates®, Goodyear®, Hydroscand®, Imperial Eastman®, O+P®, Parker®, Savage Stone®, Stratoflex®, Toledo®, and Weatherhead®.

## Hose saw blades

### Notched scalloped hydraulic hose blades

Notched scalloped knives are designed for rough duty cutting on spiral hose up to 6 wire.

Available in sizes 6"-14" to fit Clean-Cuts™, Aeroquip®, Custom Crimp®, Gates®, Goodyear®, Hydroscand®, Imperial Eastman®, O+P®, Parker®, Savage®, Stone®, Stratoflex®, Toledo®, and Weatherhead®.

### Micro-slotted smooth hydraulic hose blades

Features "new" micro-slotted smooth edge knife technology combining the better finishes of a double bevel knife with the more aggressive performance of a slotted knife. This is our most universal knife grind and will give you two times longer blade life than smooth edge knives. Used for cutting spiral hose, industrial hose, Teflon, PTFE, Kevlar, and metal hose.

Available in 6" to 14" sizes to fit Clean-Cuts™, Aeroquip®, Custom Crimp®, Gates®, Goodyear®, Imperial Eastman®, Parker®, Stratoflex®, Toledo®, and Weatherhead® saws.

Also available in 16" to 26"sizes to fit Hydroscand®, Finn Power®, Marken®, O+P®, Savage®, Stone®, Techmaflex® and Uniflex® saws.

### Slotted smooth hydraulic hose blades

Designed for cutting 4 to 6 wire spiral hoses, this high performance heavy duty slotted knife reduces pinching by skiving the sides of the hose while cutting.

Available in sizes 16"to 36" to fit on Finn Power®, Hydroscand®, Marken®, O+P®, Savage®, Stone®, Stratoflex®, Techmaflex® and Uniflex® saws.

## Hose preparation

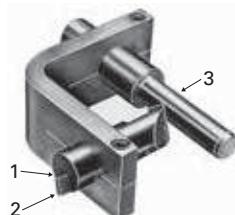

### Skiving tools

#### FT1229-size

Silver chromate mandrel  
(for reusable fittings)

- 1 FT1229-2-3 blade holder
- 2 FT1229-3-4 skive blade
- 3 FT1229-100-size

#### FT1230-size

Yellow chromate mandrel  
(for reusable fittings)

- 1 FT1229-2-3 blade holder
- 2 FT1229-3-4 skive blade
- 3 FT1230-100-size

#### FT1231-size

Black oxide mandrel  
(for internal skive crimp fittings)

For skiving rubber covered wire reinforced hoses

When selecting skive tools, refer to Eaton document A-EQCR-TM001-E for proper skive length of hose sizes.

Hose size	Reusable fittings		Crimp fittings		Crimp internal skive fittings	
	FT1229	Skive length	FT1230	Skive length	FT1231	Skive Length
-03			-3	0.45

### FT1279

#### Auger attachment

The FT1279 auger attachment permits efficient skiving of rubber covered wire reinforced hose.

Designed for use with FT1229, FT1230 and FT1231 skiving tools, the FT1279 auger attachment promotes quick completion of hand skiving operations.

**Reusable fitting assembly equipment****FT1097****Portable reusable hose assembly machine****FT1097-2-1****Vise kit for FT1097 machine**

The optional vise kit for the FT1097 reusable hose assembly machine includes all hardware necessary to install the kit. Reusable hose fitting sockets are conveniently held secure during assembly.

**Fitting Specifications**

Any screw together reusable hose fitting with a hex size 21/8" or smaller

**Features**

- Bench or stand mounted
- Easy to operate
- Convenient foot switch
- U.L. listed
- 102 RPM

**Electrical Requirements**

1/2 hp reversible, variable speed, universal motor; as the torque increases the speed decreases. 110V AC, single phase, 25-60 Hz, or 220V, AC, single phase, 25-60 Hz.

## Hose preparation

### Reusable hose assembly machine

#### FT1013

#### Portable reusable hose assembly machine

#### Fitting Specifications

Fabric and single wire braid, -04 through -40  
Double wire and 4 spiral wire, -04 through -32

#### Features

- Quick acting wrench type chuck
- Easy to operate
- Safety guard
- Versatile
- Safety snap type switch
- Safety footswitch
- 36 rpm
- 45" x 56" x 46", 170 lbs.

#### Electrical requirements

1/2 hp reversible, variable speed, universal motor; as the torque increases the speed decreases. 110V AC, single phase, 25-60 Hz, or 220V AC, single phase, 25-60 Hz.

#### Ordering Instructions

FT1013-1-5	Base machine, 110V, with vise
FT1013-1-6	Base machine, 220V, with vise
FT1013-1-3	Base machine, 110V, with stand, vise and socketing tool
FT1013-1-4	Base machine, 220V, with stand, vise and socketing tool
FT1013-1-1	Base machine, 110V, with tool kit, stand, vise and socketing tool

## Hose preparation

### Reusable fitting accessories

#### FT1220-10

#### Reusable fitting assembly mandrels

##### Specifications

The FT1220-10 kit includes all assembly mandrels listed for -4 through -20 for the assembly of Eaton 411, 401, and 406 reusable hose fittings. Individual mandrels may also be ordered by using the part numbers to the right.

Thread type	SAE 37° (JIC)	SAE 45° PTT	30°
Use with fitting nos.	411	401	406
Dash size			
-4	1582-4S	1582-4S	
-5	1582-5S	1582-5S	
-6	583-6S	1582-6S	
-8	1582-8S	1582-8S	
-10	1582-10S	1582-10S	
-12	583-12S	1582-12S	
-16	1563-16S		1561-16S
-20	1563-20S		1561-20S
-24	1563-24S		1561-24S
-32	1563-32S		

Kit part number	Fitting part number	Thread types	Size range
1562 (not shown)	401, 406, 411, 412	SAE 45°, SAE 37° (JIC), PTT, NPTF	-4 thru -32
1597 (not shown)	401, 412	SAE 45°, NPTF	-4 thru -12
1598 (not shown)	411, 412	SAE 37° (JIC), NPTF	-4 thru -32
1599 (not shown)	411, 412	SAE 37° (JIC), NPTF	-4 thru -12

### FT1038A PTFE hose tool

#### Hose specifications

Smooth bore PTFE Hose, -03, -04, -05, -06, -08, -10 and -12

#### Features

- Small
- Hand held tool

#### Ordering instructions

FT1038A PTFE hose tool (-03 thru -12)

FT1038B PTFE hose tool (-16, -20)

### F2015 SOCKETLESS™ fitting bench mounted assembly machine

#### Hose specifications

SOCKETLESS hose, all sizes

#### Features

- Fast, hand assembly
- Bench mounted
- Hose is securely held
- Mandrels included

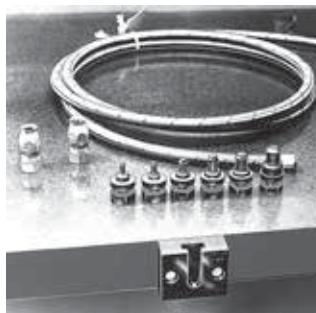

#### Ordering instructions

F2015 Complete machine

## Reusable fitting and Hose cutting accessories

### FT1081

#### PTFE hose assembly tool kit

##### Hose specifications

Smooth bore PTFE hose, -03, -04, -05, -06, -08, -10 and -12 hose

FT1090-3-10-4 and FT1090-3-10-5 are useful wire flare tools to use in conjunction with kit FT1081.

##### Features

- Inexpensive
- Easy to use
- Seats PTFE tube against sleeve

##### Ordering instructions

FT1081 Complete tool kit

Includes:

FT1081-3-	Mandrel holder
FT1081-3-2-3	Mandrel -3 hose
FT1081-3-2-4	Mandrel -4 hose
FT1081-3-3-5	Mandrel -5 hose
FT1081-3-4-6	Mandrel -6 hose
FT1081-3-5-8	Mandrel -8 hose
FT1081-3-6-10	Mandrel -10 hose
FT1081-3-7-12	Mandrel -12 hose
FT1081-16	Mandrel -16 hose
FT1081-20	Mandrel -20 hose

## Hose cutting accessories

### 4573-00000

#### Multi-line hose separation tool

Designed for separation of tri-, quad- and five-line hose

##### Replacement blade

Part No. 4523-04005

### 4523-04006

#### Hand-held hose cutter

Handy tool for cutting Eaton Synflex hose 1/8-inch to 1/2-inch in diameter. Blades are replaceable. Vinyl cushioned grips

##### Replacement blade

Part No. 4523-04005

### T-191

#### Plastic tube and hose cutter

Only 2-7/8" long, the versatile T-191 offers quick and clean square cuts on 1/16" to 1/2" O.D. plastic tubing and non-wire reinforced hose. The T-191 can be either bench or wall mounted and offers the safety of closing automatically when not in use.

##### Replacement blade

Part No: T-191B  
(one per package)

**Note:** 1 Individual die. Requires the use of die cage kit FT1307-2-9 or removable die cage FT1307-2-13.

# Assembly equipment

## Hose proof test stands

L

### FT1312

#### Hose proof test stand

##### Hose specifications

Assemblies up to 2" I.D., 6 spiral wire

##### Features

- Designed to use tap water, eliminating the need for a special test fluid
- Compact power unit is air driven
- Air regulator and gauge provide easy pressure adjustment and monitoring
- Tough transparent Lexan\* lid
- 79" x 36" x 53", 550 lbs

##### Power unit

The power unit of the FT1312 tester is a compact, economical air driven hydraulic pump. It will provide sufficient hydraulic pressure to proof test any Aeroquip hose assembly, up to 22,000 psi

\*Lexan is a General Electric trademark.

### FT1261

#### Hose proof test stand

##### Hose specifications

Assemblies up to 2" I.D., 6 spiral wire in 50 ft. coil lengths

##### Features

- Designed to use tap water, eliminating the need for a special test fluid
- Air regulator and gauge provide easy pressure adjustment and monitoring
- Tough transparent Lexan\* lid
- 96" x 84" x 54", 800 lbs

##### Power unit

The power unit of the FT1261 tester is a compact, economical air driven hydraulic pump. It will provide sufficient hydraulic pressure to proof test any Aeroquip hose assembly, up to 22,000 psi

\*Lexan is a General Electric trademark.

\*\*Internal Skive fittings only.

**FT1058****Hose proof test stand****Features**

- Pressure gauge
- Release valve
- Hand hydraulic pump
- Foot switch
- Fluid reservoir, use SAE 5 wt. hydraulic oil (oil not included)
- Electric fluid pump
- Safety lid
- Pressure port (3/4–14 NPTF Female Port)
- 42" x 22" x 9" (41" with legs), 75 lbs
- 10,000 psi maximum proof pressure

**Electrical requirements**

110V 60 Hz, single phase motor

**Ordering instructions**

1FT1058 as shown above. Legs can be removed for bench mounting.

## Contamination control products

L

### FT1455 Series Projectile cleaning system

#### FT1455 Series projectile cleaning system

FT1455 Series is focused on eliminating contamination in hydraulic systems. Contamination control is crucial during the preparation processes in assembling fittings on hose, tubes, and pipes.

These systems shoot the FT1355 Series cleaning projectiles through hose, tubes, and pipe assemblies to successfully remove rubber dust and metal particles arising from the hydraulic hose cutting process, remove metal flashings from the hose assembly process (crimping), and remove contaminated oil from hoses, tubes and pipes prior to installation in hydraulics systems.

#### Features

- Provides industry leading ISO cleanliness levels
- Simple and robust construction
- Available in hand-held and bench-mount configurations
- Ideal for portable small volume applications, and large volume production applications
- Broad variety of projectile and nozzle types and sizes to match application needs
- Minimal setup, works off shop air (80–110 psi)
- Capability: 1/8" to 4 1/2" ID hose, tube or pipe
- Available in kits or individual replacement hardware components
- Kits available with and without projectiles

#### Typical Applications

<b>Hydraulics</b>	<ul style="list-style-type: none"><li>• Removes rubber dust and metal particles from the hydraulic hose cutting process</li><li>• Removes metal flash from the crimping process on hose and tubes</li><li>• Removal of contaminated oil from hoses, tubes and pipes in hydraulic systems</li></ul>
<b>Pneumatics</b>	<ul style="list-style-type: none"><li>• Eliminates rubber contamination, metal particles, contaminated oil and moisture that causes breakdowns and inefficiency</li></ul>
<b>Heat exchangers &amp; condenser</b>	<ul style="list-style-type: none"><li>• Eliminates contamination that reduces heat transfer resulting in low level performance</li></ul>
<b>Steam boilers</b>	<ul style="list-style-type: none"><li>• Removes most scaling in steam pipes for maintenance servicing</li></ul>
<b>Air conditioning &amp; refrigeration</b>	<ul style="list-style-type: none"><li>• Eliminates minute particles in copper tubes and coolant lines that affect system performance</li></ul>
<b>Oxygen &amp; gas</b>	<ul style="list-style-type: none"><li>• Eliminates oil, grease and other contaminants from copper or S/S tubing</li></ul>
<b>Oil, gas &amp; chemical processing</b>	<ul style="list-style-type: none"><li>• Efficient cleaning of pipes as part of service maintenance</li></ul>
<b>Earthmoving equipment</b>	<ul style="list-style-type: none"><li>• Maintenance reduction in flushing time and filter usage</li></ul>
<b>Automotive &amp; servicing</b>	<ul style="list-style-type: none"><li>• Cleaning of fuel lines and brake lines prior to assembly and servicing of components</li></ul>
<b>Food &amp; beverage</b>	<ul style="list-style-type: none"><li>• Product recovery retrieval of product from lines. Reducing or eliminating solvents or detergents</li></ul>
<b>Gun barrels</b>	<ul style="list-style-type: none"><li>• To remove rust, scale or powder residue much faster than brushing or swabbing</li></ul>

Contamination Control Products  
go to E-HOIN-TT032-E2.

**FT1455 Series****Hardware****FT1455-L1**

Hand held projectile cleaning hardware for small hose diameters (up to 1-1/4" hose ID)

- Capability – For use with 1/8" through 1-1/4" ID hose, tube or pipe assemblies
- Construction – Simple construction with durable brass and aluminum parts with rigid plastic handle
- Form factor – Hand-held, portable - ideal for mobile applications

- Typical applications: small volume hose shop environments
- Includes hand-held launcher hardware only. Does not include adapter rings and nozzles for operation. Intended for replacement purposes only

**FT1455-L2**

Hand held projectile cleaning hardware for medium hose diameters (up to 2" hose ID)

- Capability – For use with 1/8" through 2" ID hose, tube or pipe assemblies
- Construction - Precision machined aluminum with fully anodized components
- Form factor – Hand-held, portable – ideal for harsh environments and heavy use

- Typical applications: Production hose and tube shops, mobile hose fabricators and mobile applications
- Includes hand-held launcher hardware only. Does not include adapter rings and nozzles for operation. Intended for replacement purposes only

**FT1455-L3**

Hand held projectile cleaning hardware for large hose diameters (up to 3-1/2" hose ID)\*

- Capability – For use with 1/8" through 3-1/2" ID hose, tube or pipe assemblies
- Construction - Precision machined aluminum with fully anodized components
- Form factor – Hand-held, portable – ideal for harsh environments and heavy use

- Typical applications: Production hose and tube shops, mobile hose fabricators and mobile applications
- Includes hand-held launcher hardware only. Does not include adapter rings and nozzles for operation. Intended for replacement purposes only

**FT1455-L4**

Bench mount projectile cleaning hardware kit for small hose diameters (up to 1-1/4" hose ID)

- Capability – For use with 1/8" through 1-1/4" ID hose, tube or pipe assemblies
- Construction – Stainless steel housing with anodized aluminum components
- Form factor – Bench mount – ideal for production assemblies (1.2 second cycle time)

- Typical applications: Production hose and tube shops
- Includes bench mount launcher hardware, 5 micron air filter, pneumatic foot switch and twin line air hose and 7 nozzles for hose ID ranging from 1/4" through 1-1/4"

**Note:** For proper operation the following are required:

- 80 psi (5.5 Bar) minimum to 110 psi (7.5 Bar) maximum air pressure
- 1/2" ID air hose with a minimum of 55 SCFM (1.6 m<sup>3</sup>/min) air flow rate†
- 5 micron air filter and regulator with gauge are strongly suggested
- A large industrial compressor is strongly recommended
- A compressed air dryer is strongly recommended

†A minimum of 38 SCFM (1.1 m<sup>3</sup>/min) air flow rate at 80 psi (5.5 bar) is required for FT1455-L3 launcher

\*FT1455-L3 can be converted to work on hose ID up to 4" with the addition of FT1455-N-45 4-1/2" aluminum locking nozzle.

# L Assembly equipment

## Contamination control products

### FT1455 Series

#### Projectile cleaning system kits

##### FT1455-K1

Hand held projectile cleaning kit for small hose diameters (up to 1-1/4" hose ID)

- Capability – For use with 1/8" through 1-1/4" ID hose, tube or pipe assemblies
- Construction – Simple construction with durable brass and aluminum parts with rigid plastic handle

- Form factor – Hand-held, portable – ideal for mobile applications
- Typical applications – small volume hose shop environments

##### FT1455-K2

Hand held projectile cleaning starter kit for small hose diameters (up to 1-1/4" hose ID)

- Capability – For use with 1/8" through 1-1/4" ID hose, tube or pipe assemblies
- Construction – Simple construction with durable brass and aluminum parts with rigid plastic handle

- Form factor – Hand-held, portable – ideal for mobile applications
- Typical applications – small volume hose shop environments

##### FT1455-K3

Hand held projectile cleaning kit for medium hose diameters (up to 2" hose ID)

- Capability – For use with 1/8" through 2" ID hose, tube or pipe assemblies
- Construction – Precision machined aluminum with fully anodized components

- Form factor – Hand-held, portable – ideal for harsh environments and heavy use
- Typical applications – Production hose and tube shops, mobile hose fabricators and mobile applications

##### FT1455-K4

Hand held projectile cleaning kit for medium hose diameters (up to 2" hose ID)

- Capability – For use with 1/8" through 2" ID hose, tube or pipe assemblies
- Construction – Precision machined aluminum with fully anodized components

- Form factor – Hand-held, portable – ideal for harsh environments and heavy use
- Typical applications – Production hose and tube shops, mobile hose fabricators and mobile applications

##### FT1455-K5

Hand held projectile cleaning hardware kit for large hose diameters (up to 3-1/2" hose ID)

- Capability – For use with 1/8" through 4-1/2" hose, tube or pipe assemblies
- Construction – Precision machined aluminum with fully anodized components

- Form factor – Hand-held, portable – ideal for harsh environments and heavy use
- Typical applications – Production hose and tube shops, mobile hose fabricators and mobile applications

## FT1455 Series

### Cleaning nozzles

Broad variety of nozzles are available allowing the operator to select the ideal nozzle for each application based on the different size and type of hoses, hose fittings, tube and pipe assemblies. All nozzle sizes are denoted by the projectile exit diameter (mm).

#### FT1455-N-HXX

##### Nozzles for hose assemblies

- Universal nozzle for use with hoses
- Also work on pipe, heavy walled tubing and many fitting configurations

#### FT1455-NT-XX

##### Nozzles for tube assemblies (Inch)

- Nominal inch tube nozzles have a lip on the inside that forms an airtight seal when tube is fully inserted into the nozzle

#### FT1455-J-XX

##### Nozzles for hose assemblies with JIC fittings

- Nozzles molded with 37° male flare on tip to fit female JIC fittings on hose assemblies

#### FT1455-NT-XXXXX

##### Nozzles for tube assemblies (Metric)

- Metric tube nozzles have a lip on the inside that forms an airtight seal when tube is fully inserted into the nozzle
- Metric tube nozzle designations utilize the largest wall thickness for a given outside diameter, but fit all smaller wall thicknesses as well

Part number	Description
FT1455-N-HXX	Nozzles for hose assemblies
FT1455-N-H06	Hose nozzle (1/4")
FT1455-N-H08	Hose nozzle (5/16")
FT1455-N-H10	Hose nozzle (3/8")
FT1455-N-H13	Hose nozzle (1/2")
FT1455-N-H16	Hose nozzle (5/8")
FT1455-N-H19	Hose nozzle (3/4")
FT1455-N-H25	Hose nozzle (1")
FT1455-N-H32	Hose nozzle (1 1/4")
FT1455-N-H38	Hose nozzle (1 1/2")
FT1455-N-H50	Hose nozzle (2")
FT1455-N-U55	Universal hose nozzle (1 1/8" thru 3 1/2")
FT1455-N-45	4 1/2" aluminum locking nozzle

FT1455-NT-XX	Nozzles for tube assemblies (Inch)
FT1455-NT-32	TUBE nozzle 1 1/4" OD
FT1455-NT-06	TUBE nozzle 1/4" OD
FT1455-NT-03	TUBE nozzle 1/8" OD
FT1455-NT-10	TUBE nozzle 3/8" OD
FT1455-NT-08	TUBE nozzle 5/16" OD

FT1455-NT-XX	Nozzles for tube assemblies (Metric) Outside diameter X wall thickness
FT1455-NT-06x1.5	Metric tube nozzle UC-6 X 1.5
FT1455-NT-08x1.5	Metric tube nozzle UC-8 X 1.5
FT1455-NT-10x1.5	Metric tube nozzle UC-10 X 1.5
FT1455-NT-12x2.0	Metric tube nozzle UC-12 X 2.0
FT1455-NT-14x2.0	Metric tube nozzle UC-14 X 2.0
FT1455-NT-15x2.0	Metric tube nozzle UC-15 X 2.0
FT1455-NT-16x2.5	Metric tube nozzle UC-16 X 2.5
FT1455-NT-18x2.5	Metric tube nozzle UC-18 X 2.5
FT1455-NT-20x3.0	Metric tube nozzle UC-20 X 3.0
FT1455-NT-22x2.0	Metric tube nozzle UC-22 X 2.0
FT1455-NT-25x3.0	Metric tube nozzle UC-25 X 3.0
FT1455-NT-28x2.5	Metric tube nozzle UC-28 X 2.5
FT1455-NT-30x4.0	Metric tube nozzle UC-30 X 4.0
FT1455-NT-35x3.0	Metric tube nozzle UC-35 X 3.0
FT1455-NT-38x5.0	Metric tube nozzle UC-38 X 5.0
FT1455-NT-42x3.0	Metric tube nozzle UC-42 X 3.0
FT1455-NT-50x5.0	Metric tube nozzle UC-50 X 5.0
FT1455-FFORX	Nozzle for use with flat face O-ring seal fittings (FROS)

FT1455-J-XX	Nozzles for hose assemblies with JIC fittings
FT1455-J-06	JIC nozzle (4 1/2")
FT1455-J-10	JIC nozzle (4 1/2")
FT1455-J-13	JIC/TUBE nozzle (-8, 1/2")
FT1455-J-16	JIC/TUBE nozzle (-10, 5/8")
FT1455-J-19	JIC/TUBE nozzle (-12, 3/4")

## FT1455 Series

### Adapter & locking rings

#### FT1455-L2-AR1

##### Adapter ring

Adapter ring for FT1455-L2 launcher to receive 1/8" thru 1-1/4" nozzles

- FT1455-L2-AR1 adapter ring fits the FT1455-L2 hand held launcher and all nozzle types and sizes between 1/8" and 1-1/4"

#### FT1455-L3-LR

##### Locking ring

3-1/2" aluminum locking ring for FT1455-L3 launcher

- FT1455-L3-LR locking ring fits FT1455-L3 hand held launcher, both FT1455-L3-AR2 & FT1455-L3-AR3 adapter rings, and FT1455-N-U55 Universal hose nozzle

#### FT1455-L3-AR2

##### Adapter ring

Adapter ring for FT1455-L3 launcher to receive 1/8" thru 1-1/4" nozzles

- FT1455-L3-AR2 adapter ring fits the FT1455-L3 hand held launcher and all nozzle types and sizes between 1/8" and 1-1/4"

#### FT1455-L3-AR3

##### Adapter ring

Adapter ring for FT1455-L3 launcher to receive 1-1/2" thru 2" nozzles

- FT1455-L3-AR3 adapter ring fits the FT1455-L3 hand held launcher and all nozzle types and sizes between 1-1/2" and 2"

## FT1455 Series Accessories

### FT1455-NH25

#### Desktop nozzle holder

- The desktop nozzle holder is a great alternative to storing the nozzles in the carrying case
- Can be easily attached to the workbench and offers easy access during change overs and operation
- Accommodates all types of nozzles ranging from 1/4" to 2"

### FT1455-QC

#### Quick release coupling

- Quick release coupling offers a quick disconnect and exchange of air supply to all 3 models of hand held projectile launchers
- Ideal for portable applications that require frequent disconnects

### FT1455-CC

#### Carrying case

- Convenient carrying case to store and carry the hand held projectile launchers and relevant nozzles
- Works will all 3 models of hand held projectile launchers

## FT1455 and FT1355 Series

### Recommended nozzles and cleaning projectiles for hoses and hose assemblies

#### Recommendations for hoses

Nominal hose diameter			
Inches	mm	Nozzle part no.	Cleaning projectile part no.
3/16	05	FT1455-N-H06	FT1355-H-06
1/4	06	FT1455-N-H06	FT1355-H-10 or FT1355-H-12
5/16	08	FT1455-N-H08	FT1355-H-12 or FT1355-H-14
3/8	10	FT1455-N-H10	FT1355-H-14 or FT1355-H-16
1/2	13	FT1455-N-H13	FT1355-H-18 or FT1355-H-20
5/8	16	FT1455-N-H16	FT1355-H-22
3/4	19	FT1455-N-H19	FT1355-H-26
1	25	FT1455-N-H25	FT1355-H-33 or FT1355-H-36
1 1/4	32	FT1455-N-H32	FT1355-H-40 or FT1355-H-45
1 1/2	38	FT1455-N-H38	FT1355-H-50 or FT1355-H-55
2	50	FT1455-N-H50	FT1355-H-60 or FT1355-H-65
2 1/2	63	FT1455-N-U55	FT1355-H-75
3	76	FT1455-N-U55	FT1355-H-85
3 1/2	89	FT1455-N-U55	FT1355-H-100
4	102	FT1455-N-45	-
4 1/2	114	FT1455-N-45	-

#### Recommendations for hose assemblies with ORS fittings

ORS fitting dash size	Nozzle part no.	Cleaning projectile part no.
-4	FT1455-4FFORX	FT1355-H-06 or FT1355-H-07
-6	FT1455-N-H06	FT1355-H-12
-8	FT1455-N-H10	FT1355-H-16
-10	FT1455-N-H13	FT1355-H-22
-12	FT1455-N-H16	FT1355-H-26
-16	FT1455-N-H19	FT1355-H-33
-20	FT1455-N-H25	FT1355-H-40

#### Recommendations for hose assemblies with Code 61 or 62 flanges

Code 61 or 62 flange dash size	Nozzle part no.	Cleaning projectile part no.
-8	FT1455-N-H10	FT1355-H-16
-10	FT1455-N-H13	FT1355-H-22
-12	FT1455-N-H16	FT1355-H-26
-16	FT1455-N-H19	FT1355-H-33
-20	FT1455-N-H25	FT1355-H-40
-24	FT1455-N-H32	FT1355-H-50
-32	FT1455-N-H32	FT1355-H-60

#### Recommendations for hose assemblies with JIC fittings

JIC fitting dash size	Nozzle part no.	Cleaning projectile part no.
-4	FT1455-J-06	FT1355-H-06 or FT1355-H-07
-6	FT1455-J-10	FT1355-H-12
-8	FT1455-J-13	FT1355-H-16
-10	FT1455-J-16	FT1355-H-22
-12	FT1455-J-19	FT1355-H-26
-16	FT1455-J-25	FT1355-H-33
-20	FT1455-J-32	FT1355-H-40
-24	FT1455-J-38	FT1355-H-50
-32	FT1455-J-50	FT1355-H-60

**FT1355 Series****Cleaning projectiles  
for hose, tube and  
pipe assemblies**

FT1355 cleaning projectiles work by being compressed against the internal surface of the hose, tube or pipe. Cleaning projectile selection should favor a diameter 20% to 30% larger than the internal diameter of the hose, tube or pipe being cleaned.

Projectiles are available in 3 variations as outlined below, and are manufactured from virgin materials with a specific cell structure and density to match the application's needs. Appropriate selection of the cleaning projectile based on the type of application ensures effective cleaning.

**FT1355-H-XX****Hose cleaning projectiles  
for hose assemblies**

- Universal cleaning projectile for use with hose, tube and pipe assemblies
- Removes fine particles of loose contaminants after cutting operations
- Can also be used for product purging prior to assembly

**FT1355-H-XX Cleaning projectiles for hose assemblies**

## FT1355 Series

### Cleaning projectiles for tube and pipe assemblies

#### FT1355-A-XX

##### Abrasive cleaning projectiles for tube and pipe assemblies

- For use with tubes or pipe assemblies
- Removes mild to medium amounts of contaminants including surface rust and scale build-up
- Can be used multiple times

##### FT1355-A-XX Abrasive cleaning projectiles for tube and pipe assemblies

Part no.	Description
FT1355-A-06	Abrasive cleaning projectile (06mm)
FT1355-A-07	Abrasive cleaning projectile (07mm)
FT1355-A-10	Abrasive cleaning projectile (10mm)
FT1355-A-12	Abrasive cleaning projectile (12mm)
FT1355-A-14	Abrasive cleaning projectile (14mm)
FT1355-A-16	Abrasive cleaning projectile (16mm)
FT1355-A-18	Abrasive cleaning projectile (18mm)
FT1355-A-20	Abrasive cleaning projectile (20mm)
FT1355-A-22	Abrasive cleaning projectile (22mm)
FT1355-A-24	Abrasive cleaning projectile (24mm)
FT1355-A-26	Abrasive cleaning projectile (26mm)
FT1355-A-28	Abrasive cleaning projectile (28mm)
FT1355-A-30	Abrasive cleaning projectile (30mm)
FT1355-A-33	Abrasive cleaning projectile (33mm)
FT1355-A-36	Abrasive cleaning projectile (36mm)
FT1355-A-40	Abrasive cleaning projectile (40mm)
FT1355-A-45	Abrasive cleaning projectile (45mm)
FT1355-A-50	Abrasive cleaning projectile (50mm)
FT1355-A-55	Abrasive cleaning projectile (55mm)
FT1355-A-60	Abrasive cleaning projectile (60mm)

#### FT1355-T-XX

##### Tube cleaning projectiles for tube and pipe assemblies

- Cleaning projectiles for use with tube and pipe assemblies
- Removes mild to medium amounts of contaminants including surface rust and scale build-up
- Removes mandrel lubricants, grease and other oils typically used in bending processes
- Strongly recommended for cleaning stainless steel tubes

##### FT1355-T-XX Tube cleaning projectiles for tube assemblies

Part no.	Description
FT1355-T-06	Tube cleaning projectile (06mm)
FT1355-T-07	Tube cleaning projectile (07mm)
FT1355-T-10	Tube cleaning projectile (10mm)
FT1355-T-12	Tube cleaning projectile (12mm)
FT1355-T-14	Tube cleaning projectile (14mm)
FT1355-T-16	Tube cleaning projectile (16mm)

**Note:** \* Use the larger projectile size for maximum cleaning on hose cut with an abrasive wheel

## FT1555 CapSeal System

### FT1555 Series CapSeal system

The FT1555 CapSeal system is intended to be used in conjunction with the FT1355 and FT1455 series projectile cleaning systems to prevent recontamination of hose, tube, and pipe assemblies. The FT1555 CapSeal system utilizes heat shrink technology to encapsulate the end of a hose or tube assembly with an FT1555 CapSeal capsule.

#### Features

- Provides industry leading ISO cleanliness levels
- Robust construction for use in heavy duty applications
- Available in hand-held and bench-mount configurations
- Ideal for portable small volume applications, and large volume production applications
- Optimum CapSeal capsule design to meet a broad variety of applications
- Minimal setup
- Capability: 1/4" to 2" ID hose and fitting ends
- Available in kits or individual replacement hardware components
- Kits available with and without projectiles

### Typical applications

#### Hydraulics

- Removes rubber dust and metal particles from the hydraulic hose cutting process
- Removes metal flash from the crimping process on hose and tubes
- Removal of contaminated oil from hoses, tubes and pipes in hydraulic systems

#### Pneumatics

- Eliminates rubber contamination, metal particles, contaminated oil and moisture that causes breakdowns and inefficiency

#### Heat exchangers and condenser

- Eliminates contamination that reduces heat transfer resulting in low level performance

#### Steam boilers

- Removes most scaling in steam pipes for maintenance servicing

#### Air conditioning and refrigeration

- Eliminates minute particles in copper tubes and coolant lines that affect system performance

#### Oxygen and gas

- Eliminates oil, grease and other contaminants from copper or S/S tubing

#### Oil, gas and chemical processing

- Efficient cleaning of pipes as part of service maintenance

#### Earthmoving equipment

- Maintenance reduction in flushing time and filter usage

#### Automotive and servicing

- Cleaning of fuel lines and brake lines prior to assembly and servicing of components

#### Food and beverage

- Product recovery retrieval of product from lines. Reducing or eliminating solvents or detergents

#### Gun barrels

- To remove rust, scale or powder residue much faster than brushing or swabbing

# L Assembly equipment

Contamination control products

## FT1555 CapSeal System

### Hardware

#### FT1555-HH

##### **Hand held electric heat gun with carrying case**

- Variable temperature electronic heat gun with electronic thermocouple control
- Duratherm heating element ensure long life and even heat temperature range of 120°F (49°C) to 1100°F (593°C) and a built-in cool down switch

- Capable of sealing multiple hoses simultaneously
- Additional nozzle attachments included for other heat shrinking applications
- Operates on 120V AC power, draws 1500 watts, and can produce 17.6CFM

#### FT1555-BM

##### **Bench mount production heat shrink machine**

- Industrial production ready - brushless heat source with robust thermal insulation for 24/7 continuous operation capability
- Enables sealing of single or multiple hose or tube assemblies at one time
- White plunger provides solid surface for holding CapSeal capsules for uniform heat distribution during heat shrinking

- Dedicated air filter prevents airborne contamination during sealing
- Hot air blower timer allows for optimum cycle time depending on hose or tube ends being sealed
- Accepts CapSeal capsules from 3/4" (20mm) ID to 3" (80mm) ID and allows sealing and thread protection for most hose and tube ends from -4 (1/4") through -32 (2")
- Operates on 230V single-phase AC power at 50/60Hz and draws < 10 amps
- Please note that a L6-15 NEMA twist loc receptacle (not supplied) is required for operation

## FT1555 CapSeal System Kits

### FT1555-K1

#### Hand held electric heat gun basic kit (up to 1-1/2" hose ID and tube ends)

- Capability – for use with 1/8" through 1-1/2" hose ID or tube ends
- Form factor – Hand-held, portable – ideal for harsh environments and heavy use
- Typical applications – Mobile hose fabricators and mobile applications

#### FT1555-K1 kit includes

- FT1555-HH hand held electric heat gun with carrying case
- FT1555-HH-ST flex vacuum pump stand for hand held electric heat gun
- FT1555-HH-D15 1-1/2" diffuser for hand held electric heat gun

### FT1555-K2

#### Hand held electric heat gun starter kit (up to 1-1/2" hose ID and tube ends)

- Capability – For use with 1/8" through 1-1/2" hose ID or tube ends
- Form factor – Hand-held, portable – ideal for harsh environments and heavy use
- Typical applications – Mobile hose fabricators and mobile applications

#### FT1555-K2 kit includes in addition to contents of FT1555-K1 kit

- FT1555-2540UP CapSeal Capsules 25mm x 40mm (ID x LNGTH)
- FT1555-2840UP CapSeal Capsules 28mm x 40mm (ID x LNGTH)
- FT1555-3140UP CapSeal Capsules 31mm x 40mm (ID x LNGTH)
- FT1555-3440UP CapSeal Capsules 34mm x 40mm (ID x LNGTH)
- FT1555-3840UP CapSeal Capsules 38mm x 40mm (ID x LNGTH)
- FT1555-4650UP CapSeal Capsules 46mm x 50mm (ID x LNGTH)

### FT1555-K3

#### Hand held electric heat gun premium starter kit

- (up to 1-1/2" hose ID and tube ends)
- Capability – For use with 1/8" through 1-1/2" hose ID or tube ends
  - Form factor – Hand-held, portable – ideal for harsh environments and heavy use
  - Typical applications – Mobile hose fabricators and mobile applications

#### FT1555-K3 kit includes in addition to contents of FT1555-K1 kit

- FT1555-2023UP CapSeal Capsules 20mm x 23mm (ID x LNGTH)
- FT1555-2540UP CapSeal Capsules 25mm x 40mm (ID x LNGTH)
- FT1555-2840UP CapSeal Capsules 28mm x 40mm (ID x LNGTH)
- FT1555-3140UP CapSeal Capsules 31mm x 40mm (ID x LNGTH)
- FT1555-3440UP CapSeal Capsules 34mm x 40mm (ID x LNGTH)
- FT1555-3840UP CapSeal Capsules 38mm x 40mm (ID x LNGTH)
- FT1555-4650UP CapSeal Capsules 46mm x 50mm (ID x LNGTH)
- FT1555-5260UP CapSeal Capsules 52mm x 60mm (ID x LNGTH)
- FT1555-5860UP CapSeal Capsules 58mm x 60mm (ID x LNGTH)
- FT1555-6760UP CapSeal Capsules 67mm x 60mm (ID x LNGTH)
- FT1555-8060UP CapSeal Capsules 80mm x 60mm (ID x LNGTH)

### FT1555 CapSeal System

#### Capsules

FT1555 CapSeal capsules eliminate contamination by forming a clean and secure seal around hose and tube ends. FT1555 CapSeal system eliminates the need to stock multiple plastic threaded caps with just 16 CapSeal capsule sizes to meet all type of hose and tube end configurations.

Additionally, the quick and easy pull-off tab on each capsule eliminates the need for additional tools that could further contaminate the assemblies.

FT1555 CapSeal capsules are available in 16 sizes of varying diameter and length to match needs of all assemblies, and are available in both unit packaged and bulk packaged packaging.

Unit packaged CapSeal packages		Bulk packaged CapSeal packages	CapSeal capsule size	Hex sizes covered		Fitting	Straight	Elbow*
CapSeal part #	Packaged quantity	CapSeal part #	Packaged quantity	(mm, ID X length)	(mm)	(Inches)

\* Shorter length CapSeal capsules are recommended for elbow and angled fittings (45° and 90°)

### FT1555 CapSeal System

#### Accessories

#### FT1555-HH-D15

1-1/2" Diffuser for FT1555-HH hand held electric heat gun

- Even 360° heat diffusion to shrink CapSeal capsules fitting configurations
- Accommodates all CapSeal capsules up to 1-1/2"

#### FT1555-HH-ST

Flexible stand for FT1555-HH hand held electric heat gun

- Convenient carrying case to store and carry the hand held projectile launchers and relevant nozzles
- Works will all 3 models of hand held projectile launchers

#### FT1555-HH-D20

2" Diffuser for FT1555-HH hand held electric heat gun

- Even 360° heat diffusion to shrink CapSeal capsules
- Accommodates all CapSeal capsules up to 2"
- Stainless steel construction for superior service life

#### E-QCR-TT006-E

Operating Instructions for FT1555-BM Bench Mount Capping Machine

# Glossary and index

Glossary .....	<b>M-2</b>
Index .....	<b>M-6</b>

**M**

# Glossary

M

## A

**abrasion:** external damage to a hose assembly caused by its being rubbed on a foreign object; a wearing away by friction.

**ABS:** Air-Brake Swivel absorption: regarding hose, the process of taking in fluid. Hose materials are often compared with regard to relative rates and total amounts of absorption as they pertain to specific fluids.

**acid resistant:** having the ability to withstand the action of identified acids within specified limits of concentration and temperature

**adapter, adaptor:** **1)** fittings of various sizes and materials used to change an end fitting from one type to another type or one size to another. (i.e., a male SAE to male pipe adapter is often attached to a female SAE to create a male end union fitting); **2)** the grooved portion of a cam & groove coupling.

**adhesion:** the strength of bond between cured rubber surfaces or between a cured rubber surface and a non-rubber surface.

**adhesive:** a material which, when applied, will cause two surfaces to adhere.

**ambient temperature:** the temperature of the atmosphere or medium surrounding an object under consideration.

**ambient/atmospheric conditions:** The surrounding conditions, such as temperature, pressure, and corrosion, to which a hose assembly is exposed.

**amplitude of vibrations and/or lateral movement:** the distance a hose assembly deflects laterally to one side from its normal position, when this deflection occurs on both sides of the normal hose centerline.

**anchor:** a restraint applied to eliminate motion and restrain forces.

**annular:** refers to the convolutions on a hose that are a series of complete

circles or rings located at right angles to the longitudinal axis of the hose (sometimes referred to as "bellows").

**anodize, anodized:** an electrolytic process used to deposit protective or cosmetic coatings in a variety of colors on metal; primarily used with aluminum.

**ANSI:** American National Standards Institute.

**application working pressure:** unique to customer's application. See pressure, working.

**application:** the service conditions that determine how a hose assembly will be used.

**armor:** a protective cover slid over and affixed to a hose assembly; used to prevent over bending or for the purpose of protecting hose from severe external environmental conditions such as hot materials, abrasion, or traffic.

**assembly:** a general term referring to any hose coupled with end fittings of any style attached to one or both ends.

**ASTM:** American Society for Testing and Materials.

**attachment:** the method of securing an end fitting to a hose (e.g., banding, crimping, swaging, or screw-together 2 piece or 3 piece-style field attachable fittings).

**axial movement:** compression or elongation along the longitudinal axis.

## B

**backing:** a soft rubber layer between a hose tube and/or cover and carcass to provide adhesion.

**barb:** the portion of a fitting (coupling) that is inserted into the hose, usually comprised of two or more radial serrations or ridges designed to form a redundant seal between the hose and fitting.

**barbed and ferrule fitting:** a two-piece hose fitting comprised of a barbed insert (nipple), normally with peripheral ridges or backward-slanted barbs, for inserting into a hose and a ferrule; usually crimped or swaged.

**Barb-Tite:** a line of low pressure push-on brass hose end fittings that is a trademark of Eaton Corporation.

**bend radius:** the radius of a bent section of hose measured to the innermost surface of the curved portion.

**bend radius, minimum:** the smallest radius at which a hose can be used. For metal hose: the radius of a bend measured to the hose centerline, as recommended by the manufacturer.

**blister:** a raised area on the surface or a separation between layers usually creating a void or air-filled space in a vulcanized article.

**blow out force:** the force generated from the internal pressure attempting to push the fitting from the hose.

**body wire:** normally a round or flat wire helix embedded in the hose wall to increase strength or to resist collapse.

**bore:** **1)** an internal cylindrical passageway, as of a tube, hose or pipe; **2)** the internal diameter of a tube, hose, or pipe.

**braid:** the woven portion of a hose used as reinforcement to increase pressure rating and add hoop strength. Various materials such as polyester, cotton or metal wire are used. A hose may have one or more braids, outside or between layers of hose material.

**braid wear:** motion between the braid and corrugated hose, which normally causes wear on the outside diameter of the corrugation and the inside diameter of the braid.

**braided ply:** a layer of braided reinforcement.

**braid-over-braid:** multiple plies of braid having no separating layers.

**brand:** a mark or symbol identifying or describing a product and/or manufacturer, that is embossed, inlaid or printed.

**brass:** a family of copper/zinc alloys.

**brazing:** a process of joining metals using a non-ferrous filler metal having a melting point that is lower than

the "parent metals" to be joined, typically over +800°F (+427°C).

**bronze:** an alloy of copper, tin and zinc.

**BSPP/BSPT:** British Standard Pipe Parallel / British Standard Pipe Tapered. See fitting/coupling — pipe thread fittings.

## C

**carcass:** the fabric, cord and/or metal reinforcing section of a hose as distinguished from the hose tube or cover.

**chalking:** the formation of a powdery surface condition due to disintegration of surface binder or elastomer by weathering or other destructive environments.

**checking:** the short, shallow cracks on the surface of a rubber product resulting from damaging action of environmental conditions.

**chemical compatibility:** the relative degree to which a material may contact another without corrosion, degradation or adverse change of properties.

**chemical resistance:** the ability of a particular polymer, rubber compound, or metal to exhibit minimal physical and/or chemical property changes when in contact with one or more chemicals for a specified length of time, at specified concentrations, pressure, and temperature.

**cold flexibility:** relative ease of bending while being exposed to specified low temperature.

**collar:** **1)** the portion of a fitting that is compressed by crimping to seal the hose onto the fitting barbs and create a permanent attachment; also called a ferrule. (With field attachable fittings, the lock and seal are accomplished mechanically by the collar without crimping); **2)** a raised portion on the hose shank which functions as a connection for a ferrule or other locking device or functions as a hose stop.

**collet:** a tool or die-set used to crimp a hose end fitting onto a hose. A crimping die-

set is typically six to eight "fingers" designed for infinite diameter settings within a range or preset to a specific diameter for a given hose type and size. Some may have a replaceable cage.

**Coll-O-Crimp:** a line of hydraulic and pneumatic hose, hose end fittings, and fabrication equipment that is a registered trademark of Eaton Corporation.

**combustible liquid:** a liquid having a flash point at or above +100°F (+37.8°C).

**compound:** the mixture of rubber or plastic and other materials, which are combined to give the desired properties when used in the manufacture of a product.

**compression fitting:** see fitting/coupling – compression

**conductive:** the ability to transfer electrical potential.

**configuration:** the combination of fittings on a particular assembly.

**convoluted:** description of hose or innercore having annular or helical ridges formed to enhance flexibility.

**core:** the inner portion of a hose, usually referring to the material in contact with the medium.

**corrosion:** the process of material degradation by chemical or electrochemical means.

**corrosion resistance:** ability of metal components to resist oxidation.

**corrugated hose:** hose with a carcass fluted, radially or helically, to enhance its flexibility or reduce its weight.

**coupling:** a frequently used alternative term for hose end fitting.

**cover:** the outer component usually intended to protect the carcass of a product.

**CPE:** chlorinated polyethylene, a rubber elastomer.

**cracking:** a sharp break or fissure in the surface, generally caused by strain and environmental conditions.

**crimp diameter:** the distance across opposite flats after crimping.

**crimp/crimping:** a hose end fitting attachment method utilizing a number of dies mounted in a radial configuration. The dies close perpendicular to the hose and fitting axis, compressing the collar, ferrule, or sleeve around the hose.

**cure:** the act of vulcanization. See vulcanization.

**cut off factor:** the hose length to be subtracted from the overall assembly length that allows for the hose coupling end connection extension beyond the end of the hose.

## D

**date code:** any combination of numbers, letters, symbols or other methods used by a manufacturer to identify the time of manufacture of a product.

**deburr:** to remove ragged edges from the inside diameter of a hose end.

**design factor:** a ratio used to establish the working pressure of the hose, based on the burst strength of the hose.

**displacement:** the amount of motion applied to a hose defined as inches for parallel offset and degrees for angular misalignment.

**DOT:** Department of Transportation.

**DIN:** Deutsche Industrie Norme.

**duplex assembly:** an assembly consisting of two hose assemblies, one inside the other, and connected at the ends; also known as "jacketed assemblies."

**durometer:** an instrument for measuring the hardness of rubber and plastic compounds.

## E

**eccentricity:** the condition resulting from the inside and outside diameters not having a common center.

**effusion:** the escape, usually of gases, through a material. See permeation.

**elastic limit:** the limiting extent to which a body may be deformed and yet return to its original shape after removal of the deforming force.

**elastomer:** any one of a group of polymeric materials, usually designated thermoset, such as natural rubber, or thermoplastic, which will soften with application of heat.

**elongation:** the increase in length expressed numerically as a percentage of the initial length.

**EN:** European Normes

**ERMETO:** a steel fitting product trademarked by Eaton Corporation.

**endurance test:** a service or laboratory test, conducted to product failure, usually under normal use conditions.

**EPDM:** Ethylene Propylene Diene Monomer; an elastomer.

**extrude/extruded/**  
**extrusion:** forced through the shaping die of an extruder; extrusion may have a solid or hollow cross section.

## F

**fabric impression:** impression formed on the rubber surface during vulcanization by contact with fabric jacket or wrapper.

**fabricator:** the producer of hose assemblies.

**fatigue:** the weakening or deterioration of a material occurring when a repetitive or continuous application of stress causes strain, which could lead to failure.

**FDA:** United States Food and Drug Administration.

**fire sleeve:** slip-on or integrally extruded sleeve used to retard the effects of fire in certain applications; most often made with silicone and/or ceramic fiber.

**fitting/coupling:** a device attached to the end of the hose to facilitate connection. The following is only a partial list of types of fittings available.

• **banjo fitting:** a through bolted design featuring a hollow circle or "donut" attached to one end of the fitting barb so that the inner diameter is along the hose axis.

• **compression fitting:** a fitting style that seals on a mating tube by compressing an internal ferrule against the tube O.D.

• **field attachable fitting:** a fitting designed to be attached to hose without crimping or swaging. This fitting is not always a reusable type fitting.

• **flange style fittings:** pipe flanges and flanged fitting standards are listed under ANSI B16.5. Flanges are rated for pressure and listed as "American Class 150, 300, 400, 600, 900, 1,500 or 2,500." Pressure-temperature ratings can be obtained by consulting the ANSI specification or ASME B16.5 (American Society of Mechanical Engineers). Designs vary by neck and face style, or other dimensional changes based on use. Various finishes or grooves may be applied to the face for sealing on a gasket or o-ring. Bolt holes and other dimensions are per the ANSI standard.

• **inverted flare fitting:** a fitting consisting of a male or female nut, trapped on a tube by flaring the end of the tube material to either 37° or 45°.

• **JIC fittings:** Joint Industrial Council (no longer in existence). An engineering group that established an industry standard fitting design incorporating a 37° mating surface, male and female styles. These standards are now governed by SAE.

• **o-ring fittings:** a fitting that seals by means of an elastomeric ring of a specified material.

## pipe thread fittings:

• **NPT:** National Pipe Taper. Pipe thread per ANSI B1.20.1

# Glossary

M

• **NPTF:** National Pipe Tapered for Fuels. (Same as above except dry-seal per ANSI B1.20.3)

• **NPSH:** National Pipe Straight Hose per ANSI B1.20.7

• **NPSM:** National Pipe Straight Mechanical. Straight thread per ANSI B1.20.1

• **NPSL:** National Pipe Straight Loosefit per ANSI B1.20.1

• **BSPP, BSPT:** British Standard Pipe Parallel, British Standard Pipe Taper. BS21-

• quick connect fitting: a fitting designed to quickly connect and disconnect. These fittings come in many styles and types.

• split flange fitting: a fitting consisting of a flange retainer and a flange of two halves. This design allows the flanges to be installed after the retainer has been attached to the hose, making the flange reusable. SAE code 61 and 62.

• **tube fitting:** a hose fitting of which the mating end conforms to a tube diameter. The male or female end of a compression fitting.

**flammable gases/liquid/media:** a flammable gas, including liquefied gas, is one having a closed cup flash point below +100°F (+37.8°C) and a vapor pressure greater than 25 psi (174.2 KPa).

**flex cracking:** a surface cracking induced by repeated bending and straightening.

**flow rate:** a volume of media being conveyed in a given time period.

**fluid:** a gas or liquid medium.

**fluorocarbon:** an organic compound containing fluorine directly bonded to carbon. The ability of the carbon atom to form a large variety of structural chains gives rise to many fluorocarbons and fluorocarbon derivatives.

**FOR-SEAL:** a product name for a hose end configuration using an o-ring sealing method, trademarked by Eaton Corporation.

## G

**gpm:** gallons per minute.

## H

**heat resistance:** the property or ability to resist the deteriorating effects of elevated temperatures.

**helix:** a shape formed by spiraling a wire or other reinforcement around the cylindrical body of a hose; typically used in suction hose.

**hose:** a flexible conduit consisting of a tube, reinforcement, and usually an outer cover.

**hydrostatic testing:** the use of liquid pressure to test a hose or hose assembly for leakage, twisting, and/or hose change-in-length.

**Hytrex:** registered trademark of DuPont.

## I

**I.D.:** inside diameter.

**identification yarn:** a yarn of single or multiple colors, usually embedded in the hose wall, used to identify the manufacturer.

**impression:** a design formed during vulcanization in the surface of a hose by a method of transfer, such as fabric impression or molded impression.

**impulse:** an application of force in a manner to produce sudden strain or motion, such as hydraulic pressure applied in a hose.

**innertube:** the innermost layer of a hose; the hose material in contact with the medium.

**insert:** optional term for nipple. See nipple.

**interlocking clamp:** a clamp which engages the fitting in a manner which prevents the clamp from sliding off the fitting, typically a bolt or U-bolt style with interlocking fingers which engage an interlock ring on the fitting.

**interlocking ferrule:** a ferrule, which physically attaches to the fitting preventing the ferrule from sliding off the fitting.

**ISO:** International Organization for Standardization.

## J

**jacket:** a seamless tubular braided or woven ply generally on the outside of a hose.

**JIC:** see fitting/coupling—JIC.

## K

**kinking:** a temporary or permanent distortion of the hose induced by bending beyond the minimum bend radius.

## L

**layline:** the line of printed information that runs parallel on the side of a manufactured hose giving details such as part number, psi rating, hose size, and manufacturing data.

**layer:** a single thickness of rubber or fabric between adjacent parts.

**loop installation:** the assembly is installed in a loop or "U" shape, and is most often used when frequent and/or large amounts of motion are involved.

**LPG, LP Gas:** liquefied petroleum gas.

## M

**MAWP:** see pressure, maximum allowable working.

**mandrel built:** a hose fabricated and/or vulcanized on a mandrel.

**manufacturer's identification:** a code symbol used on or in some hose to indicate the manufacturer.

**media, medium:** the substance(s) being conveyed through a system.

## N

**NAHAD:** National Association of Hose & Accessories Distributors.

**Neoprene:** a registered trademark of DuPont.

**nipple:** the internal member or portion of a hose fitting.

**nitrile rubber (NB/Buna-N):** a family of acrylonitrile elastomers used extensively for industrial hose.

**nominal:** a size indicator for reference only.

**nomograph:** a chart used to compare hose size to flow rate to recommended velocity.

**non-conductive:** the inability to transfer an electrical charge.

**NPT/NPTF:** national pipe threads. See fitting/coupling—pipe thread fittings.

**nylon:** a family of polyamide materials.

## O

**OAL:** see overall length

**O.D.:** outside diameter.

**OE/OEM:** original equipment manufacturer.

**oil resistance:** the ability of the materials to withstand exposure to oil.

**oil swell:** the change in volume of a rubber article resulting from contact with oil.

**operating conditions:** the pressure, temperature, motion, and environment to which a hose assembly is subjected.

**o-ring fitting:** see fitting/coupling—o-ring.

**overall length (OAL):** the total length of a hose assembly, which consists of the free hose length plus the length of the coupling(s).

**oxidation:** the reaction of oxygen on a material, usually evidenced by a change in the appearance or feel of the surface or by a change in physical properties.

**ozone cracking:** the surface cracks, checks, or crazing caused by exposure to an atmosphere containing ozone.

**ozone resistance:** the ability to withstand the deteriorating effects of ozone (generally cracking).

**P**

**permanent fitting:** the type of fitting which, once installed, may not be removed for re-use.

**permeation:** the process of migration of a substance into and through another, usually the movement of a gas into and through a hose material; the rate of permeation is specific to the substance, temperature, pressure, and the material being permeated.

**pin pricked:** perforations through the cover of a hose to vent permeating gases.

**pitch:** **1)** the distance from one point on a helix to the corresponding point on the next turn of the helix, measured parallel to the axis; **2)** the distance between the two peaks of adjacent corrugation or convolution.

**plating:** a material, usually metal, applied to another metal by electroplating, for the purpose of reducing corrosion; typically a more noble metal such as zinc is applied to steel.

**ply:** an individual layer in hose construction.

**polymer:** a macromolecular material formed by the chemical combination of monomers, having either the same or different chemical compositions.

**pressure:** force ÷ unit area. For purposes of this document, refers to PSIG (pounds per square inch gauge).

**pressure drop:** the measure of pressure reduction or loss over a specific length of hose.

**pressure, burst:** the pressure at which rupture occurs.

**pressure, maximum allowable working:** the maximum pressure at which a hose or hose assembly is designed to be used. Abbreviated as MAWP.

**pressure, working:** the maximum pressure to which a hose will be subjected, including the momentary surges in pressure, which can occur during service. Abbreviated as WP.

**psi:** pounds per square inch.

**PVC:** polyvinyl chloride. A low cost thermoplastic material typically used in the manufacture of industrial hoses. The operating temperature range is -500°F to +1750°F (-295.5°C to +954.4°C).

**R**

**reinforcement:** the strengthening members, consisting of either fabric, cord, and/or metal, of a hose. See ply.

**reusable fitting/coupling:** see fitting/coupling—field attachable fittings.

**RhinoHide:** an abrasion resistant covered hydraulic hose that is a registered trademark of Eaton Corporation.

**RMA:** The Rubber Manufacturers Association, Inc.

**S**

**SAE:** Society of Automotive Engineers.

**shank:** that portion of a fitting, which is inserted into the bore of a hose.

**skive:** the removal of a short length of cover and/or tube to permit the attachment of a fitting directly over the hose reinforcement.

**sleeve:** a metal cylinder, which is not physically attached to the fitting, for the purpose of forcing the hose into the serrations of the fitting.

**smooth bore:** a term used to describe the type of innercore in a hose.

**specification:** a document setting forth pertinent details of a product.

**spiral:** a method of applying reinforcement in which there is not interlacing between individual strands of the reinforcement.

**spring guard:** a helically wound component applied internally or externally to a hose assembly, used for strain relief, abrasion resistance, collapse resistance.

**standard:** a document, or an object for physical comparison, for defining product characteristics, products, or processes, prepared by a consensus of a properly constituted group of those substantially affected and having the qualifications to prepare the standard for use.

**static wire:** wire incorporated in a hose to conduct static electricity.

**stem:** see nipple.

**Sub-Zero:** a low temperature resistant hose that is a registered trademark of Eaton Corporation.

**surge (spike):** a rapid and transient rise in pressure.

**swelling:** an increase in volume or linear dimension of a specimen immersed in liquid or exposed to a vapor.

**T**

**Thick-Flange:** a hose end fitting that is trademarked by Eaton Corporation.

**tube:** the innermost continuous all-rubber or plastic element of a hose.

**tube fitting:** see fitting/coupling—tube.

**tubing:** a non-reinforced, homogeneous conduit, generally of circular cross-section.

**V**

**vacuum resistance:** the measure of a hoses ability to resist negative gauge pressure.

**vibration:** amplitude motion occurring at a given frequency.

**viscosity:** the resistance of a material to flow.

**vulcanization:** a process during which a rubber compound, through a change in its chemical structure, improves or extends elastic properties over a greater range of temperature.

**W**

**weathering:** the surface deterioration of a hose cover during outdoor exposure, as shown by checking, cracking, crazing and chalking.

**wire reinforced:** a hose containing wires to give added strength, increased dimensional stability and crush resistance. See reinforcement.

**working temperature:** the temperature range of the application; may include the temperature of the fluid conveyed or the environmental conditions the assembly is exposed to in use.

**WP:** working pressure.
