

2018 CARTRIDGE CATALOGUE

Australia

Hydraulic Specialties Pty Ltd - 2018 Cartridge Catalogue

Effective 1st January 2018

All prices listed are quoted in \$AU and are G.S.T. exclusive.

- This edition is an update from the 2012 version.
- Whilst every effort is made to hold prices steady, list prices are subject to change without prior notice.
- Where two manifold port sizes are listed the assembly price is for the smaller and may cost more for the larger port size.
- All performance and specification figures are taken from the latest possible literature and may vary from older literature versions.
- It is the responsibility of the system designer to determine suitability of the component.
- A commissioning, assembly or product conversion fee may apply.
- Product pictures shown are indicative only. Actual products may differ from that shown.
- Product contained in the cartridge catalogue is offered subject to Hyspecs' normal terms and conditions of sale.
- A restocking fee may apply on goods returned for credit.
- All manifolds priced are for aluminium unless otherwise stated. For steel manifolds an extra charge may apply.
- For high pressure (240+ bar) Hyspecs recommends steel manifolds.
- Pressure or flow setting charges may apply.
- Solenoid valves are priced with flying leads (DC only) unless otherwise stated. AC coils are DIN plug only. Hirschman / DIN plugs are not included in the price.
- Where needed banjo bolts are included in the price.

Introduction

About Hydraulic Cartridge Manifolds

For over 45 years Hyspecs have offered comprehensive high quality hydraulic cartridge valves for the mobile and industrial equipment markets. We are designing and manufacturing cartridge manifolds using an extensive range of cartridges from HydraForce, Command Controls, Eaton and Sun to meet virtually any need encountered in machine design for flow rates of 0.4 to 1700 l/min.

Cartridge valving offers hydraulic system design engineers and customers an unlimited range of integral circuit design possibilities. With the extensive range of cartridges available, entire system valving can be housed in one manifold, saving on hoses & fittings, installation time and space. Having all of the valves in one block also eliminates possible leakage points and the chance of failure.

This catalogue aims to introduce just some of the cartridge valves we now have available and help design engineers and customers to use these common valves in different applications effectively. We also custom design and manufacture cartridge manifolds to suit particular customer requirements usually incorporating several valve functions in one manifold.

How To Use The Catalogue

This catalogue is edited on the base of valve functions – Pressure Controls, Flow Controls, Directional Controls, Solenoid Valves, Motion Controls, Proportional Valves, Excavator Valving, and Cetop Subplates/Modules. From the CONTENTS index, you can locate the valves with the functions you are looking for. In the valves, you can choose one suitable for your particular application – flow rate, pressure, ratio, ports.

For example, you can find Single Pilot Operated Check Valves on page C4. However, for 25 l/min, 220 bar and 2:1 pilot ratio, HS1030P6 manifold with two PC10-32 cartridges is the best choice. 75 x 65 x 37mm shows the dimension of the manifold only. The cartridge numbers listed in this catalogue have been abbreviated for simplicity of description. Please consult Hyspecs for the full cartridge code and cartridge options.

HS1030P6 or P8

Cartridge Options	Q max l/min	P max bar	Notes	Ports BSP	Assembly Price
PC10-30	22	240	Ratio 4:1, 3-ports	3/8"-1/2"	\$ 232.00
PC10-32	30	240	Ratio 2:1, 3-ports	3/8"-1/2"	\$ 267.00
PC10-38	45	240	Ratio 3:1, thermal RV	3/8"-1/2"	\$ 305.00

All the ports are clearly shown in the catalogue as;

Accum = Accumulator

C1, C2= Cylinder

D = Drain

M1, M2 = Motor

Pi, Po = Pressure in, out

RP1, RP2 = Reduced pressure

V, V1, V2 = Valve

Br = Brake

Cf = Controlled flow

Elel, EleR = Elevator in, return

Mh, Mp = Motor hold, pilot

Pil, pp = Pilot

T = Tank

Vh, Vp = Valve hold, pilot

By = Bypass

Ch, Cp = Cylinder hold, pilot

F1r1, F1rR = Floor in, return

P, P1, P2, P3 = Pressure

R = Return

x = plugged

- **Maximum operating pressure of block and cartridge combinations is limited to the component with lowest operating pressure rating.**
- Cartridge blocks and valves can be custom designed for a specific application or ordered as an 'off the shelf' item for more common functions. Price and delivery for custom designed blocks are available on application.
- Modification on manifolds will be identified by reversion code at the end of the manifold part number, e. g. _B or _C.
- **NOTE:** The cartridge numbers listed in this catalogue have been abbreviated for simplicity of description. Please consult Hyspecs for the full cartridge code and cartridge options.

Proportional Valve Controllers

Hydraforce Programmable Valve Drivers - Coil & Remote Mounted

The CE-qualified, compact plug-in style, microprocessor based, valve driver designed for use in hydraulic proportional valve applications.

- Configurable to drive either one or two coils using SAE J1939 CAN input or an independent voltage, current, or resistance signal.
- The EVDR-0201 is designed to proportionally control one or two coils to a user-defined metering profile

Proportional Valve Controllers

Eaton Amplifier Plugs

Proportional Power plugs, conforming to ISO 4400/DIN 43650 interface, are designed for compact, electronic control of non-feedback hydraulic proportional and switching valves. This plug/valve combination offers an easy to use, cost-effective alternative to traditional rack mounted machine controls. Din plug mounting, protection to IP67.

Proportional Power Plugs are available in the following configurations:

Type C plugs offer “soft switch” control. Using built in ramps for discrete “on/off” signals, soft switch power plugs with proportional valves help to reduce hydraulic system shocks, improving machine usability and extending life

Type D and K plugs are controlled with a standard analog command signals, (0-10V and 4-20mA respectively.)

Proportional Valve Controllers

Hydraforce Electronic Control Units (ECU)

CoreTek ECUs are general-purpose programmable controllers that can be used as stand-alone controllers or integrated with other CAN networked devices.

These controllers are designed to withstand the environmental demands of mobile off-highway equipment applications.

They feature flexible input and output configuration and are capable of driving up to 3.0 amps per output pin.

Excavator Valving - Hyspecs

Introduction

- **Custom designed cartridge valve manifolds, designed specifically to control excavator attachments.**
- **Features:**
 - Compact design allows valving to be positioned in confined spaces where others do not fit.
 - Manifold design minimises oil leakage paths
 - Reliable low current draw solenoids provide millions of cycle lifetime
 - Hardened spools and cages for longer life
 - All work ports are located on single block face
 - Can be operated continuously in temperatures up to 100°C without challenging the coils insulation.
 - Integral pressure reducing/relieving valves guard against pressure spikes and thermal shock.
 - Low pressure drops
- **Material:**
 - Aluminium or steel for pressures up to 240 bar and 350 bar respectively.
 - All steel blocks are nickel plated to protect your investment.

A/HS8223P16GRCS	Dual Pump Flow Sharing Valve	Designed for higher flow (up to 150 x 2 LPM) attachment. The valve will deliver priority flow from each main pump to the attachment depending on demand from load sensing line.

Excavator Valving - Hyspecs

HS9501 - Pilot Valves

- Pilot valves are used to provide pilot pressure to the auxiliary spool on an excavator. Auxiliary spools are often used to attach rotating grapples. This valve gives the operator fingertip control of that new attachment. A pressure reducer/reliever provides the user with a means of setting up the desired flow with proportional auxiliary spools.

Excavator Valving – Hyspecs

SAFEX™ Valve

SAFEX™ valves are designed to be mounted directly to the boom and/or the stick (arm) cylinders of hydraulic excavators. With the correct installation and adjustment these valves prevent uncontrolled lowering of the boom/stick cylinders in the event of a hose burst, thereby becoming part of the load holding and lowering system designed to comply with **AS 1418.8 / ISO 8643**.

Excavator Valving – Hyspecs

SAFEX™ Valve (*continued*)

Features and Benefits

- Designed to meet the Australian Safety Regulations for Excavators and complies with ISO 8643.
- Compact design with dual code SAE 61 and 62 ports.
- Relief valve with screen is included for cylinder protection (full flow).
- Duplicated valve (V), pilot (PIL) ports allow the valves to be fitted to either side. End pilot (PIL) and drain (DR) ports make it easy to connect.
- E/TP port on the valves can be used for initial bleed off, a test point to set the relief, manual lowering, and equalizing two boom cylinders.
- Assembled from top quality standard cartridges, which can be purchased in any major city around the world.
- Manufactured by HYSPECS and HYTECH.
- Steel manifolds and Nickel plated
- Tamper proof capable.

IMPORTANT: It is the owner's responsibility to ensure that these valves are installed and set correctly in order to comply with the safety standards. Incorrect installation and/or adjustment could result in severe injury, disability or death!

NB. Contact Hyspecs for Safex Valve technical data sheets and setup procedure.

Excavator Valving Accessories - Walvoil

Multi-Function Ergonomic Handles

- Quickhitch, tilt and thumb valves require switching gear to allow the operator control.
- Walvoil remote handles provide this control, with their various switching and handle options.
- M12 mounting adaptor
- Quenching diodes must be used on rocker switches for DC operation.

Cetop Subplates & Modules - How To Order

- Hyspecs has an extensive range of standard CETOP 3 and 5 sub-plates and control modules. These are designed to suit the majority of applications. Hyspecs offers series or parallel configuration for up to 7 stations. Sub-plates are machined for two pressure ranges: - up to 240 and 350 bar. Cetop 7 and 8 subplates are also available but not listed in this catalogue.

Standard and Proportional Valve Coils

Benefits of using Hydraforce Standard Coils

- High Quality Materials**
 HydraForce coils are made with high quality, Class H magnetwire and insulation materials.
- More Ampere Turns**
 More copper wire turns deliver more magnetic ux per current input.
- Rugged Casing**
 Coils are housed in a durable 30% glass- lled thermoplastic casing, providing a rigid base for coil terminations.
- Superior Frame Density**
 Thick iron surrounds the copper winding, increasing the coil's ux density and therefore its power as an electromagnet.
- Multiple Termination Options**
 HydraForce offers many standard types of electrical connections, and will consider OEM requests for special terminations.
- DC Windings**
 All windings are DC. AC service coils are internally full-wave-recti ed, so cartridges are voltage-interchangeable and do not exhibit AC “buzz” or suffer burn-out due to partial armature shift. HydraForce DC coils are UL Listed under File #AU2326.
- Heat Rise**
 Rather than using heat sinks or external cooling methods, HydraForce uses larger coils for lower heat rise, stronger electromagnetic force and longer coil life. HydraForce coils canbe operated continuously at ambient temperatures to 100°C without challenging the coil's insulation system.
- Custom Coils**
 HydraForce can provide windings precisely-tailored for special OEM applications. Some of the common windings are listed on the following page. Consult the factory if these do not meet your requirements.

Coil Information

- AC service coils are internally rectified, and can be used in 50 or 60 cycle (Hz) lines.
- Special voltages and terminations are available for OEM applications; consult factory.
- Coil should always be installed with lettering facing up.
- Standard coils are not hermetically sealed. For applications requiring water- or weather-resistant coils, see page 3.400.1
- AC voltage service with transient surges over 1000 volts may require that a varistor be placed in parallel at the coil.
- EG option coils do not use ground terminal. Pins 1 and 2 are not polarity-sensitive.

Standard and Proportional Valve Coils

E Water-Proof / Weather-Resistant Coils

New Series E coils are the latest innovation in coil technology from Hydraforce. They are designed to meet the demanding requirements of mobile and industrial applications where weather resistance is required. Models with Deutsch DT and Metri-Pack® integral connectors and new dual leadwire models meet or exceed all IP69K standards for weather resistance, offering superior reliability under the most demanding conditions. Series E coils have passed what is known in the construction, agricultural and mobile equipment markets as the “Thermal Shock Dunk Test.”

Series E coils feature a new, fully encapsulated coil winding technology. Deutsch and Metri-Pack® connectors are molded into the coil encapsulation, assuring IP69K weather resistance. An external metal shell serves as the element to concentrate the magnetic flux for the coil winding and also functions as a rugged container for the coil. No O-rings or waterproofing kits are required.

Models are available to fit most HydraForce valves. In most applications, these coils can be used to retrofit HydraForce valves already in field operation and will offer superior weather resistance.

- **Thermal Shock Dunk Test Rated**

Series E coils with leadwires, Deutsch DT and Metri-Pack® connectors have passed what is known in the construction, agricultural and mobile equipment markets as the “Thermal Shock Dunk Test.”

- **Easy Installation**

No O-rings, external sealing, or waterproofing kits required.

- **IP69K Rated with Integral Connectors and with New Dual Leadwires**

Models with Deutsch DT and Metri-Pack® connectors as well as the new dual leadwire models are rated for IP69K. DIN and dual spade connections are rated for IP65.

- **Fully Encapsulated Windings**

Coils are fully encapsulated for zero leak paths when ordered with integral connector options.

- **Field Retrofit-able**

In most cases, Series E coils can be used to replace existing coils on HydraForce valves already in operation.

- **Rugged Metal Shell**

The rugged external metal shell provides exceptional protection against physical damage, ensuring durability under harsh operating conditions. It is salt spray rated for 1000 hours per ASTM B117 specifications.

- **High Temperature Operation**

Class N 200°C (392°F) rated magnet wire and insulation materials allow high temperature operation and ensure long life under demanding conditions. Continuous-duty operation up to 100°C and 115% of nominal voltage.

- **Shock Resistant**

Integral grommet for Deutsch DT connectors increases durability under conditions of high random shock.

Rules - Of - Thumb

- For every 1 kW of drive, the equivalent of 5 lpm @ 100 Bar can be produced
- To idle a pump when it is unloaded will require about 5% of its full rated power.

Fluid Power Formulas

- For a pump/motor,
Torque (Nm) = Power (kW) x 9543 / Speed (rpm)
- Force developed by a cylinder,
Force (N) = Bore Area (cm²) x Pressure (Bar) x 10

Conversions

- 1 U.S. gallon = 231 in³ = 3.785 L
- 1 L = 0.2642 U.S. gallon = 61.0303 in³
- 1 in³ = 16.387 cc
- 1 Imperial gallon = 1.2 U.S. gallon
- 1 Bar at sea level = 14.504 PSI
- 1 HP = 0.746 kW
- 1 Atmosphere = 1.013 Bar
- 1 km/h = 0.62 mph
- 1 m = 3.28 ft = 39.37 in
- 1 Nm = 0.7376 foot-lbs
