MELAG S CLASS

MEL10056

The Euroklav - autoclaves fulfil the strict stipulations of the "Class S" according to the European Standard EN 13060, and are designed for applications in doctors practices in which the instruments used and the types of instrument wrapping do not require "Class B" autoclaves. The MELAG Euroklav - autoclaves are high-tech autoclaves which have been examined by an accredited testing laboratory. Sensors and an innovative microprocessor control, regulate and monitor the parameters necessary for a secure sterilisation pressure and temperature.

The Euroklav VS RANGE has an effective vacuum pump which creates a vacuum at the beginning of the sterilization process in order to assist the air evacuation from the chamber and to create a post-vacuum for optimal drying results especially for wrapped goods.

The Euroklac 23-S is designed as a "stand alone" device and only needs a power supply. Please note that only solid instruments should be used in the 23-S model..
