4. DESCRIPTION OF THE MACHINE

4.1 DESCRIPTION OF THE MACHINE AND ITS COMPONENTS

The TV 300-350-400 cutting-off machine with circular blade for ferrous metals produced by MACC is made from a solid casting, carefully processed and provided with holes for fastening to a bench or pedestal. The upper surface, designed to allow the complete draining away of the cutting fluid, has been processed using precision machinery to allow the attachment of a sturdy vice with burr-proof jaws.

The bar-stop device allows the length required to be present and a constant level of performance for repeated cuts. The blade-holding head is firmly attached to a reduction unit in oil bath built onto the motor and to the base by means of a joint which provides 45° rotation both to the left and right and the cutting movement with manual feed.

The coolant pump is also securely attached to the motor block.

The main switch is located above the motor block. Another switch is used to select motor rotation speed and therefore cutting speed.

The control lever, fitted with an ergonomic hand-grip reduces fatigue during operation to a minimum.

The blade is protected by a guard which in its turn protects the operator from ejected shavings and coolant. The machine is supplied with a set of service spanners.

4.2 INTENDED AND UNSUITABLE USES OF THE MACHINE

The TV 300-350-400 cutting-off machine with circular blade has been designed and built to cut bars, structural steel and ferrous metal pipes in accordance with the instructions contained in this manual.

Therefore, the cutting of other materials is not permitted: if the above recommendations are not observed, the machine could be damaged and the health and safety of the operator put at risk.

Cutting is not permitted, if the bar has not been first locked in the vice.

5. MAIN TECHNICAL DATA

Under no circumstances should the following data be altered, this is in order to protect the correct functioning of the machine and to avoid creating safety risks for the operator.

| MOTOR | three-phase |
|---------------------------------|---|
| Motor Power | TV 300 kW 4 - TV 350 - TV 400 kW 5,5 |
| Motor revolutions (two speeds) | 2800 rpm |
| CIRCULAR BLADE (SAW) | Number of teeth and feed holes according to table |
| Maximum diameter | TV 300 = ø300 mm |
| | TV 350 = 350 mm |
| | TV 400 = ø400 mm |
| BLADE REVOLUTIONS per minute | TV 300 = rpm 5400 |
| | TV 350 = rpm 4300 |
| | TV 400 = rpm 3800 |
| CUTTING ANGLE | 45°right - 45°left |
| PIECE LOCKING VICE: MAX OPENING | 150 - 170 mm |
| MACHINE WEIGHT | 115 kg - 1130 N TV 300 / 145 kg - 1425 N TV 350 |
| | 150 kg - 1470 N |

6. HANDLING AND TRANSPORTATION

For safe handling and transportation use a lift truck for movement indoors or a bridge crane; in this case, also using cables fastened to the sling positions indicated on the drawing 1 Encl. 2. Keep the machine in its normal position and avoid turning it upside down. If the machine is fastened to the pedestal, stability will be greatly reduced and therefore all the necessary measures should be taken to stop the machine from tipping over. All handling and transportation operations should be carried out by trained staff.

7. MACHINE INSTALLATION

A. MACHINE CHECK AND CONTROL LEVER ASSEMBLY

The machine should be checked to make sure that it has not been damaged during transportation and handling. Control lever assembly : Fit the supplied head lever 19, into position 2 and fasten it by means of the nut.

B. FASTENING OF THE MACHINE

The machine will be able to operate in keeping with the technical parameters supplied by MACC if it is positioned correctly and fastened securely to the bench or the factory floor so that vibrations are minimal during operation. Consult drawing 2 TV 300-350-400 Installation plan Encl. 1. C. ASSEMBLY OF CIRCULAR BLADE

For the assembly of the circular blade, remove the screw 105 (Draw. 6 Encl. 2), keeping the motor-blade block raised and rotate the mobile guard 5 backwards. Unscrew the nut 90 clockwise, withdraw the flange 11, insert the circular blade, then refit flange 11 and nut 90.

D. ELECTRICAL CONNECTION TO THE MAINS

Install a differential thermomagnetic switch with characteristics suited to the mains.

Make sure that the power supply voltage corresponds to the voltage on the motor plate. Connect the cable to the power supply line observing the colour codes of the individual wires, pay particular attention to the earth wire. Connect the machine, make sure that the rotation of the circular blade is in the direction shown by the arrow on the guard.

8. MACHINE START UP AND OPERATION

8.1 DEVICES AND THEIR LOCATION

(The location of the devices described is shown on the TV 300-350-400 installation plan Encl. 2)

- 1 Allen wrench size 36

8.3 OPERATION

CHECKS TO CARRY OUT BEFORE EACH CUT

- A. Make sure that the circular blade is fastened securely by means of nut 90 (DRAW.4 ENCL.2)
- B. Check that the hand indicates the required cutting angle (vice scale)
- C. Make sure that the head and vice are locked by means of the lever 8 (DRAW.5-6 ENCL.3)
- D. With the motor off, lower the head and check that at the end of the stroke, the circular blade does not touch the counter-vice 25. If the circular blade does touch, adjust the screw 67 located at the centre of the head support 3 (DRAW.3 ENCL.2)
- E. Make sure that the piece to be cut is adequately secured in the vice.

CUTTING OPERATION

- A. Before each cutting operation, if the cutting inclination is not as required, correct or change the inclination by placing the bench lever 8 in position B (DRAW.6 ENCL.3) and after correction, forcefully turn it to position 1.
- B. Clamp the piece to be cut by means of the handwheel 37 (DRAW.5 ENCL.3), , take hold of the handle 89 located at the end of the head lever, turn the speed switch 87. The blade will now start turning.
- C. Position the blade carefully on the piece to be cut. Then increase the pressure in order to accelerate the cutting operation without using excessive force. To make a series of cuts, position the bar-stop 39 at the size required. Fix it into position by using the knob 64 (DRAW.7 ENCL.4).
- D. To replace the circular blade carry out the same operations used to assemble the circular blade. (chapter 7c).
 E. For the choice of most suitable blade consult the table ENCL. 1.

We strongly discourage the use of blades with ruined or insufficiently sharp cutting edges

8.4 SPECIAL SAFETY CHECKS

A. Before using the machine, check carefully that the safety devices are in good working order, that the mobile parts are not blocked, that no parts are damaged and that all the components are installed correctly and are functioning properly. B. Make sure, before operating the machine, that the screws of the guards and other protective devices are adequately secured, especially the screws on the circular blade guard and the rotation levers of the circular blade mobile guard.

C. Check that the safety microswitches and the emergency button are functioning correctly. Test them during a loadless machine cycle.

D. Make sure that the mobile guard does not leave uncovered an angle of more than 5° in order to preve nt fingers from entering.

E. Pay attention to environmental conditions. Do not expose the machine to rain; to not use it in damp environments, position the machine on a clean dry floor that has no oil or grease stains.

F. Before using the machine, the operator should make sure that all tools and service spanners used for maintenance or adjustment have been removed.

8.5 GENERAL SAFETY RULES

A. Wear appropriate clothing. The operator's clothing should not be loose or dangling nor should it have parts which could easily get caught. Sleeves should contain elastic.

Belts, rings or chains should not be worn. Long hair should be kept in a net.

B. Avoid unstable operating positions. Find a safe and evenly balanced position to operate the machine.

C. Keep the work area tidy, untidiness increases the risk of accidents.

D. Do not use the power supply cable to disconnect the plug from the socket. Protect the cable from high temperatures, oil or sharp edges. For outdoor use, only use extension cables which are in line with current regulations.

8.6 MEASURES TO PREVENT RESIDUAL RISKS

A. The removal of guards and tampering with the safety devices is strictly forbidden.

B. Gloves should always be worn.

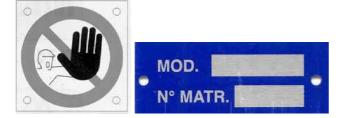

- C. Standard work clothing should be used and kept closed and should not have flapping parts.
- D. The machine should not be cleaned with liquids under pressure.

E. In the event of fire, extinguishers should not be used unless they are the powder type. The electric power supply to the machine should always be disconnected in these circumstances.

F. Do not insert foreign bodies into the motor cover and to not supply the machine with voltage by tampering with the safety microswitches or main switch.

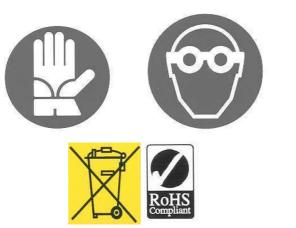

G. Take the necessary precautions to avoid the machine being started by other people during loading, adjustment, piece changing or cleaning.

Remove jaw 29 (draw.5 Encl.3), withdraw vice 26 completely by turning handwheel 37. Clean and grease the parts worked by the counter-vice 25 and vice 26. Put a drop of oil in the oil feed hole 103 located behind the handwheel.

B. Checking of bench lever functioning

Check regularly that the rotation release - locking lever is working properly. In the event of the lever not locking correctly, tighten ring nut 36 (draw.5 Encl.3). Make sure that with the bench lever in position 2, arm 3 which supports the blade-motor block can rotate freely.

10. INFORMATION REGARDING ENVIRONMENTAL NOISE

An environmental noise test carried out on the TV 300-350-400 cutting-off machine with circular blade, identical to the machine to which these operation instructions refer, has given the following results:

ACOUSTIC RADIATION PRESSURE

- 1. L_{Aeg} = 84.6 dB (A)
- 2. L_{peak} = 92.3 dB (the maximum acceptable value is 140 dB).
- 3. The level of background noise has no influence = 48.5-54.2 dB (A).

11. LAYING OFF AND DISMANTLING

11.1 LAYING OFF

If the machine is to be laid off or left idle for a long period, the following operations must be carried out:

- 1. Disconnect the machine from the electricity mains.
- 2. Empty oil from the gear box and cooling liquid from its tank
- 3. Clean carefully the machine by getting rid of all traces of grease, especially on the worked parts that must be protected with anti-oxidants.
- 4. Cover the machine with a sheet, preferably not plastic as it can cause rust due to the humidity condensation.
- 5. Store the machine in a closed, dust-free place.

11.2 DISMANTLING

If the machine must be definitively dismantled, its components must be sub-divided for the purpose of a possible recycle of the materials and for the environment safety. The following table is given for your guidance:

| Steel | Electrical Components | Light alloy | Cast iron | Bronze Copper | Plastic and rubber | Various |
|---------------------|---|-------------|------------------|------------------|-----------------------|---------|
| Flanges and pins | Motors winding | Gearboxes | Structural parts | Bronze | Seals | |
| Bolts | Push button Control system (relays-transformer) | Cylinders | | | Electrical box | |
| Springs | | | | | Belts | |
