

SPRING-LOADED SHOCK ABSORBING CASTORS

NEW RANGE

Designed to reduce the impact of shocks during transport, providing smoother movement, reduced risk of damage, and a quieter ride. Richmond's new shock absorbing castors are ideal for use in applications with uneven surfaces or where debris is present. They are also great for moving delicate items where additional vibration and shock to the load could cause damage.

During transport over uneven surfaces the spring supports the load, absorbing the impact instead of transferring it all to the item being transported.
