

Vero Anti-Bac

Technical Bulletin

Product Description

Vero is a clear yellow moderately viscous liquid with a mild lemon fragrance. It is designed to wash and sanitise dishes in areas where multiple sinks or dishwashers are not available.

Vero has been extensively tested and has proven anti-microbial performance against a range of food poisoning bacteria. It has been tested at Silliker Microtech, and under actual use conditions.

Vero is an easy to use product eliminating the need for a separate sanitising step after the washing.

The foam level of Vero is matched to the use level of the sanitiser, so acts as a visual indicator that the product is working. If the suds level is very low it indicates not enough sanitiser is being used, so more should be added.

Applications

How To Use

Use Vero at a dilution of 1:500 or 2ml/litre. Pumps are available that fit either the 5 litre or 1 litre bottles. Use 8ml pump for domestic size sinks, adding one pump for a small load or 2 pumps for a normal sink. Use the 30ml pump for commercial size sinks adding from 1 – 3 pumps dependant on amount of water.

Vero is also available in 5 litre bottles fitted with the Protekta Cap system, so they can be connected to a Smart pump.

Wash dishes in solution, rinse under clean water and allow to air dry for optimum hygiene

Do not add any soaps, detergents or other chemicals to Vero as deactivation may occur. Never add any manual dishwashing detergents as they will completely deactivate the product.

Vero is designed for cleaning and sanitising hard surfaces, such as plates, cutlery and general dishes.

Do NOT use as a sanitiser on fresh fruit and vegetables. For this application, use Dominant Food Sanitiser.

Technical Data

Vero contains a blend of biodegradable non-ionic surfactants plus a quaternary sanitiser.

Vero has been independently tested under dirty conditions at 1:500 using the principles outlined in BS EN 1276:1997 against the following organisms:

- Salmonella choleraesuis
- Listeria monocytogenes
- Escherichia coli

Vero passed the test with >log 5 reduction after 2 minutes at 40°C. This is a kill rate > 99.999%.

Testing carried out at Silliker Microtech.

Vero contains a blend of biodegradable non-ionic surfactants plus a quaternary sanitiser.
