

Glassmaster

Technical Bulletin

Product Description

Glassmaster contains high levels of water softening agents and scale inhibitors to keep glass washers sparkling clean with no need to descale.

Glassmaster is an alkaline formulation for effective removal of grease and lipstick. It also contains a low foam surfactant for enhanced cleaning and easy rinsing.

The concentrated formula means a drum lasts a long time to give excellent economy in use.

Applications

How To Use

Most glasswashers have a built in pump to dispense the detergent. Set to deliver approx. 3g/litre Glassmaster. In older machines with detergent tanks start off with a dilution of 1 part Glassmaster to 2 parts water and adjust if required. In soft water areas the concentration can be reduced to around 2g/litre.

Your Dominant Representative or Technician can check the concentration and adjust to its optimum by measuring the pH on the glasses before rinsing. This should be around 9.5 to 10.

Technical Data

Glassmaster is a strongly alkaline liquid containing a high level of water softening sequestrants, plus a low foam surfactant and dispersants.

Glassmaster is non foaming. The normal use level is between 2.0 – 3.0g/l.

Pack Sizes

(2x5L Drum) 12591

Dominant Colour Code

Hazard Information & Safety

Classified as Hazardous according to the criteria of the SafeWork Australia, utilising GHS. A Safety Data Sheet for this product is available at www.dominant.com.au/sds

Danger

Causes severe skin burns and eye damage.

Poisons Schedule: S5. Caution
Dangerous Goods: Not Classified

Recommended PPE

Wear: **GLOVES, SAFETY GLASSES** when handling.
