Bag adaptor available from your installer.
- High efficiency commercial grade motors

DUCTED VACUUM SYSTEMS

Our systems are the most convenient, efficient modern method for cleaning every corner of your home. The power unit is located outside the living area in the garage or on an external wall of the home. Your system is so quiet you can use it without disturbing your baby or families TV enjoyment.

Simply insert the lightweight hose into the wall or floor inlets, located conveniently throughout your home. No more loose plugs or tripping over tangled electrical cords. No recirculated dust or dirt, dust and odours are whisked away and exhausted harmlessly outside the living areas and back to the power unit.

TYPHOON	Specification
Air Watts	580
Input Watts	1640
