SECTION 5. FIRE FIGHTING MEASURES

5.1 Suitable Extinguishing Media: Use water spray, dry chemical, carbon dioxide, or alcohol-resistant foam.

Unsuitable Extinguishing Media: Do not use water jet. Burning liquid may float on water.

5.2 Flammable Properties and Hazards: Carbon oxides, Hydrogen chloride gas, Vapors can travel to a source of ignition and flash back. Closed containers may rupture violently when exposed to fire or excessive heat.

Risk of explosion if heated under confinement. Gas/vapor explosive with air within explosion limits.

Hazardous Combustion Products: Toxic vapors may be formed. Incomplete combustion is likely to give rise to a complex mixture of airborne solid and liquid particulates and gases, including carbon monoxide and unidentified organic and inorganic compounds.

Flash Point: > 43.00 C (109.4 F) Method Used: Estimate

Explosive Limits: LEL: No data. UEL: No data.

Autoignition Pt: 600.00 C (1112.0 F)

5.3 Fire Fighting Instructions: Wear self contained breathing apparatus for fire fighting if necessary.
Further information: Self-contained breathing apparatus (SCBA) operated in positive pressure mode and complete protective clothing.

SECTION 6. ACCIDENTAL RELEASE MEASURES

6.1 Protective Precautions, Protective Equipment and Emergency Procedures: Use personal protective equipment. Avoid breathing vapors, mist or gas. Ensure adequate ventilation. Remove all sources of ignition. Beware of vapors accumulating to form explosive concentrations. Vapors can accumulate in low areas.
For personal protection see section 8. Avoid dust formation. Use personal protective equipment as described on section 8.

6.2 Environmental Precautions: Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided. Avoid spillage reaches watercourses and sewerage systems. It is recommended the installation of fire alarm system and leak detection in storage and handling sites.

Do not discharge directly into the environment or into the sewer system. The dilution water from fire fighting can cause pollution.

6.3 Methods and Material For Containment and Cleaning Up: Contain spillage, and then collect with an electrically protected vacuum cleaner or by wet-brushing and place in container for disposal according to local regulations (see section 13). Sweep up and shovel. Keep in suitable, closed containers for disposal. Isolate the leak from sources of ignition. Prevent sparks or flames.

Use natural barriers or containment of spillage. Collect spilled product and place in appropriate containers. Prevent spreading over great surfaces (e.g. by damming or installing oil booms). Absorb with liquid-binding material (e.g. sand, diatomaceous earth, acid- or universal binding agents). Dispose of this material and its container to hazardous or special waste collection point.

SECTION 7. HANDLING AND STORAGE

7.1 Precautions To Be Taken in Handling: Avoid contact with skin and eyes. Avoid inhalation of vapor or mist. Keep away from sources of ignition - No smoking. Take measures to prevent the build up of electrostatic charge. For precautions see section 2. Provide appropriate exhaust ventilation at places where dust is formed. Normal measures for preventive fire protection. Handle in accordance with good industrial hygiene and safety practice. Carry operations in the open/under local exhaust/ventilation or with respiratory protection. Keep away from clothing as well as other incompatible materials. Use personal protective equipment as required.

7.2 Precautions To Be Taken in Storing: Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage.
Storage class 510) Keep in a dry place. Provide adequate ventilation. Use explosion-proof ventilation equipment.

Store in well-ventilated place. Keep away from heat, hot surfaces, sparks, open flams and other ignition source. No smoking. Keep container tightly closed. The floor of the storage room must be impermeable, non-oxidizing and with contention dikes to retain the product in case of leakage. Store in adequate storage tanks placed in containment basin to retain product in case of leakage.

Floors should be impenetrable, resistant to liquids and easy to clean. The floor of the depot should be impermeable and designed to form a tight basin. Engineering specifications should meet local regulations.

Other Precautions: Apart from the uses mentioned in section 1.2 no other specific uses are stipulated. Apart from the uses mentioned in section 1.2 no other specific uses are stipulated.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Exposure Parameters:

8.2 Exposure Controls:

8.2.1 Engineering Controls (Ventilation etc.): Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday. General industrial hygiene practice. Provide adequate ventilation. Provide local exhaust or general room ventilation to minimize vapor concentrations. Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Do not wear contact lenses when working with chemicals.

8.2.2 Personal protection equipment:

Personal Protective Equipment Symbols:

Eye Protection: Face shield and safety glasses. Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU). Chemical safety goggles. Do not wear contact lenses when working with chemicals.

Protective Gloves: Handle with gloves. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands. Full contact.
This recommendation is advisory only and must be evaluated by an industrial hygienist and safety officer familiar with the specific situation of anticipated use by our customers. It should not be construed as offering an approval for any specific use scenario. Protective gloves made of PVC.

Other Protective Clothing: Complete suit protecting against chemicals. Flame retardant antistatic protective clothing. Choose body protection in relation to its type, to the concentration and amount of dangerous substances, and to the specific work-place. The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace. Wear suitable protective clothing.

Respiratory Equipment (Specify Type): If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU). Wear respiratory protection. Respiratory protection is not required. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN 143) dust masks. Wear appropriate breathing apparatus if air renewal not sufficient to maintain vapor under TLV.

It is recommended to use a respirator for organic vapors for exposures above half of the TLV-TWA. In cases which exposure exceed three times TLV-TWA values, use supplied air respirator (SCBA), full face-piece operated in positive pressure mode > > TLV.

8.2.3 Environmental Exposure Controls: Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.
