The Globally Harmonised System of Classification & Labelling of Chemicals

All State and Territory Dangerous Goods or Work Health and Safety Regulations have incorporated the introduction of the new Globally Harmonised System (GHS) of labelling of packaged goods.

This new labelling system only applies to the packages and cartons of goods and is not applicable for storage and handling placarding purposes. The GHS labels are being phased in over the next few years.

See Page 37 for more information.

Introduction to Safety Signage

Workplace Safety Signs should be manufactured, designed and displayed in accordance with AS1319-1994. Safety signs draw attention to objects and situations affecting health and safety. Explanations of their functions and meanings should be included in employee induction training programmes. Where it is proposed to display a new sign or to change the location of an existing sign, employees should be informed beforehand, and an explanation given for the introduction of the new sign or the change in location of the existing one.

Safety signs do not replace the need for proper accident prevention measures. Workplace Safety Signs are classified under the following descriptions:

Regulatory Signs contain instructions with which failure to comply constitutes either an offence of law, or a breach of standing orders, safety procedures or other directions, depending on which kind of control has been imposed at the work site or workplace.

They are subdivided as follows:

Prohibition Signs:

Signs that indicate that an action or activity is not permitted.

Mandatory Signs:

Signs that indicate that an instruction must be carried out.

Limitation or Restriction Signs:

Signs that place a numerical or other defined limit on an activity or use of a facility.

Custom Signs also available!

Hazard Signs are subdivided as follows:

Danger Signs: Signs warning of a particular hazard or hazardous condition that is likely to be life-threatening.

Warning Signs:

Signs warning of a hazard or hazardous condition that is not likely to be life-threatening.

Note – The term caution has now been replaced by the term warning. The two terms are regarded as interchangeable.

Emergency Information Signs:

Indicate the location of, or directions to, emergency related facilities, such as exits, safety equipment or first aid facilities.

Fire Signs:

Advise the location of fire alarms and fire fighting facilities.

Introducing our new range of Gas Cages

Features include:

- Yellow powder coated steel construction, suitable for outdoor environments.
- Solid steel roof and floor, with steel mesh sides to provide ventilation.
- All wall panels and doors are made of welded steel mesh within a sturdy steel frame for added strength.
- Strong magnetic door catches to hold doors closed and an eye lug for a padlock.
- Raised support legs with pre-drilled feet which can be permanently fixed to the ground. (Recommended)

Manifest Cabinet

A manifest is required where a premises is storing and handling dangerous goods in quantities that exceed the "Manifest Quantity" as shown in schedule 2 of the Regulation. Refer to the Regulation for the relevant information required for the manifest document.

This information should be kept in a suitable Manifest Cabinet located on the premises in a place where it is readily accessible to the emergency services authority.

A Manifest cabinet should be installed at the entrance to the property and contain:

1. Site map showing the location of hazardous chemicals and the location of all fire fighting equipment.
2. Copies of Material Safety Data Sheets for all chemicals stored on site.
3. A 24 hour phone number to be used in an emergency.
4. The cabinet should have locking systems compatible to the local Fire Brigade.

Fitted with a 003 Combination Lock.

Hazchem Placards

Hazchem Placarding

All States and Territories have adopted the NOHSC model Dangerous Goods and Storage Regulations. Over the past year each State and Territory have either released new or amendments to existing Regulations incorporating Hazchem Placarding. These Regulations have standardised on the same storage and handling placarding requirements, which applies Australia wide.

These Regulations are:

VIC	Dangerous Goods (Storage and Handling) Regulations 2012	Released 1 Dec 2012
NSW*	Work Health and Safety Regulations 2011	Released 1 Jan 2012
QLD*	Work Health and Safety Regulations 2011	Amended 1 July 2013
SA*	Work Health and Safety Regulations 2012	Amended 1 July 2013
WA	Dangerous Goods Safety (Storage and Handling of Non Explosives) Regulations 2007.	Amended 20 Feb 2013
NT*	Work Health and Safety Regulations	Amended 28 Jun 2013
TAS*	Work Health and Safety Regulations 2012	Released 1 Jan 2013

*Some states and territories have also incorporated Dangerous Goods / Hazardous Chemicals Regulations into new Work Health and Safety Regulations.

Outer Warning Placard

A HAZCHEM outer warning sign shall be prominently displayed at all road and rail entrances to the premises.

2. 800 x 200 - Maximum 8 diamonds

3. 600 x 150 - Maximum 4 diamonds

4. 450 x 150 - Maximum 3 diamonds

5. 300 x 150 - Maximum 2 diamonds

The minimum size for diamonds for packaged goods placards size is 100 x 100mm. Dangerous goods diamonds are sold separately. Refer to dangerous goods diamonds table on page 36.

Bulk Storage Placards

A Bulk Storage sign must be displayed on or adjacent to a tank containing a liquid or gas, or an area where bulk solid dangerous goods are stored of a single chemical.

Storage in Bulk is classified as:

- Class 2 gases stored in a container having a capacity greater than 500 litres.
- Chemicals other than Class 2 in liquid or paste in a container of a capacity greater than 250 litres
- In the form of a solid in an undivided quantity greater than 400 kg.

Size	800 x 400		
Description	Metal	Poly	Vinyl

6.

Refer to Edition 7 of the ADG Code for correct chemical names, hazchem code, UN number and Class. **Also note that the reverse coded letters are no longer applicable.**

C1 Combustible Liquid Placards

This sign is specifically for chemicals classified as C1 combustible liquids when stored in bulk and in packages. This sign is only for display if the quantity of chemicals exceeds the placard exemption limit as specified in Schedule 2 of the Regulations.

These are chemicals which have a flash point above 61°C and no higher than 150°C. Examples of some chemicals classified as C1 Combustible Liquids are: Distillate (Diesel) and Ethylene Glycol.

A placard for packaged goods must be displayed if the quantity of Combustible Liquids in bulk or packaged goods exceeds the quantity specified in column headed "Placarding Quantity" in Schedule 2 of the Regulations.

- ▲ **Comprehensive range of models** to suit wide variety of applications.
- ▲ **Structural components made of 304 stainless steel** for strength and durability.
- ▲ **316 stainless steel stay-open valves** for dependable operation and performance.
- ▲ **Shower head made of ABS plastic or optional 316 stainless steel.** A unique conical water pattern to gently deliver large volumes of water ensuring complete decontamination.

Pipeline Markers

Pipemarkers should be located adjacent to all Junctions, Valves, Service Applications, Bulkheads, Wall Penetrations and the like at spacing not greater than 8 metres along the service.

An exception will be for uninterrupted lengths of external services, visible along their length, where spacing of identification shall not exceed 50 metres.

Supplementary markers are required to identify a potential hazard involving the contamination of materials for human consumption or whenever a special hazard to operators or maintenance personnel is present within a service. Refer to clause 8 Australian Standard AS 1345-1995.

We can manufacture pipemarkers to suit your specific needs whether it is for only one packet or one hundred. All markers conform with AS1345-1995.

Please contact our Customer Service Department for an obligation free quotation or for assistance with your requirements.
