CM439
USB Smart Card Desktop Reader

Document Part Number	BLCM439BU
Document Issue	1.00
Date Released	01 November 2015
Solution Link Version Required	V2.14 or higher
Site Manager Version Required	V1.09 or higher

TABLE OF CONTENTS

FIGURES

Installing The CM439B Module

These instructions assume that your computer is turned on and you have installed the Site Manager or Solution Link software. You should be located at the main menu of Site Manager or Solution Link.

1. **Connect the USB cable between the PC computer and the CM439 B module.**

   Windows will attempt to identify the new hardware and install the necessary drivers. If windows is unable to locate the driver then you will need to manually install it. See installing the driver in the next section for more details.

Learning User Credentials Via Smart Card Reader

Before learning token or card information, select the customer from the Site Manager or Solution Link database that you wish to add user tokens.

If you are adding credentials to an existing system it is recommended that you first connect to the control panel and upload the current configuration before making any changes.

1. **Select and highlight the Card/ Token ID field for the first user that you want to add a new token - See Figure 1.**
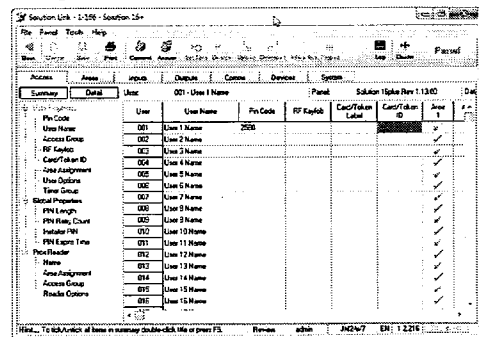

Figure 1: Solution Link - User Properties

2. **To add a token, press F11 on the computer keyboard (when using Site Manager), or press F12 on the computer keyboard (when using Solution Link).**

   A pop-up box will display with three different options - Cancel, Info and Skip.

   Cancel - select this option when you have finished adding tokens or cards.

   Info - displays the desktop reader software version.

   Skip - select this option when you wish to skip a user when adding consecutive tokens or cards.

3. **Now present the first token to the desktop reader.**

   As you add each token, both the Card-Token ID and Card-Token Label fields will identify the new token.

   The Card Token ID identifies the token ID, whereas the

Card Token Label allows easy external identification and should match the ID number located on the token itself.
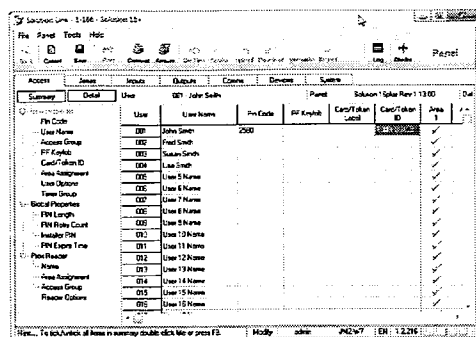

Figure 2: Solution Link - Token ID

Figure 3: PR301 Token Showing Token Label

4. **To add a token to the next user, simply present the next token or card.**

5. **When you have finished adding tokens or cards, press 'Cancel' in the pop-up box.**

   If you are adding tokens or cards to random users, then repeat both steps 1, 2, 3 and 5 until all tokens required have been added.

6. **Save the changes made, then download the new user token/card ID's to the control panel.**

Site Manager or Solution Link software will notify if there are duplicate token ID's assigned to users when saving programming changes.

Printing The User Card Number Report

The 'Panel User Card Number Report' can be used to simplify the task of distributing credentials to a large number of users. This report details the user names and the corresponding encrypted token or card label.

1. **Select the Print tab in the menu bar.**

Figure 5: Solution Link - Print Panel Reports

2. **Select the 'Panel User Card Number Report' for the type of report to print.**

3. **Select the output type required (eg. Select Printer to directly print the report or PDF to save the report in PDF file format and then print later).**

4. **Press OK to print the report.**
