Direct Link Adaptor Installer Tool

For Solution 2000/3000 Control Panels

www.boschsecurity.com.au

BOSCH
Invented for life

▶ Integrator installation tool
▶ Allows for direct connection to the panel via A-Link PLus software and a PC USB port
▶ Simply way to flash panel firmware to the latest version
▶ Use as a programming key - the DLA holds up to 3 pre-programmed panel configurations

The Direct Link Adapter (DLA) for the Solution 2000 & 3000 Intrusion panels is a versatile component designed to assist the system integrator in supporting installations from a single panel up to a large-scale roll out. The functionality offered by the DLA includes:

Direct Connect:
The DLA allows the integrator to connect directly to the intrusion panel using the A-Link Plus software and the USB port on their PC. Through this connection the integrator can change panel programming, trigger panel commands, review the panel log, and backup or overwrite the panel configuration.

Firmware Update:
New panel firmware releases can be loaded on to the DLA via a PC. The DLA can then be used (without requiring the PC) to flash the firmware on any panels in the field to the new version, without overwriting or modifying the existing panel programming.

Programming Key:
Panel configurations can be loaded on to the DLA from A-Link Plus or from existing panels and then deployed to other panels in the field (without requiring the PC). The DLA can hold up to three pre-programmed panel configurations.
