TX-103R
Pointable through 180°
Adjustable sensitivity
Adjustable pulse count
Selectable day/night operation
9V Lithium battery powered

In a ground-breaking co-operative venture, Ness and Takex have created what we think are the best outdoor detection devices ever made!

Combining Takex's superb outdoor PIRs with Ness' proven radio technology, the TX-103R and TX-114R Outdoor Radio PIRs provide excellent detection capabilities, all weather operation and long radio range to suit a variety of outdoor applications.

Both models are packed with sophisticated features including adjustable photocell for optional "night only" operation, adjustable motion detection area, 180° internal lens adjustment, long life Lithium battery operation with battery saving mode.

The TX-103R is supplied with a choice of wide and narrow angle lenses

while the TX-114R has a unique dual zone coverage pattern and is pet tolerant up to 18kg to prevent nuisance triggers by animals.

The built-in radio transmitter, custom designed and made in Australia by Ness specifically for Takex outdoor PIRs, sends alarms in encrypted Ness format along with supervisory messages, low battery alarm (and tamper alarm for the TX-114R).

Compatible control panels include any radio-enabled Ness panel including ECO8x, D8x, D16x, R16 and M1 Gold. Or use a Ness standalone receiver and interface with almost any control panel or automation system on the market.

Takex and Ness, collaborating to bring you the best of both!

Available now from Ness and selected distributors in Australia and New Zealand.
