### DESCRIPTION OF NECESSARY FIRST AID MEASURES

- **GENERAL ADVICE:** Move out of dangerous area.  
Consult a physician.  
Show this material safety data sheet to the doctor in attendance.  
Do not leave the victim unattended.
- **EYE CONTACT:** Immediately hold the eyes open and wash with fresh running water. Ensure complete irrigation of the eye by keeping the eyelids apart and away from the eye and moving the eyelids occasionally lifting the upper and lower lids. If pain persists or recurs, seek medical attention. Generally not applicable.
- **INGESTION:** Immediately remove product from the mouth and rinse mouth out with plenty of water. Then provide water slowly and as much as casualty can comfortably drink. If discomfort persists or symptoms develop, seek medical attention. Generally not applicable.
- **INHALATION:** If inhaled, remove victim to fresh air. Remove victim from exposure - avoid becoming a casualty. Allow patient to assume most comfortable position and keep warm. Keep at rest until fully recovered. Seek medical advice if effects persist. Generally not applicable.
- **SKIN CONTACT:** Take off immediately all contaminated clothing. Wash affected area with fresh running water. If skin reaction or irritation occurs, discontinue use, and seek medical attention. Generally not applicable.

### SYMPTOMS CAUSED BY EXPOSURE:

- May cause an allergic skin reaction.
- Causes eye irritation.

### MEDICAL ATTENTION & SPECIAL TREATMENT

<b>Suitable extinguishing equipment:</b>	Non-flammable. There is no restriction on the type of extinguisher which may be used. Use extinguishing media suitable for surrounding area.
<b>Specific hazards arising from the chemical:</b>	Avoid contamination with oxidising agents i.e., nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result.
<b>Special protective equipment:</b>	Fire fighters should wear self-contained breathing apparatus to minimise risk of exposure to vapour or products of combustion.
<b>Precautions for Fire Fighters:</b>	<p>Alert Fire Brigade and tell them location and nature of hazard.</p> <p>Wear breathing apparatus plus protective gloves in the event of a fire.</p> <p>Prevent, by any means available, spillage from entering drains or water courses.</p> <p>Use fire-fighting procedures suitable for surrounding area.</p> <p><b>DO NOT</b> approach containers suspected to be hot.</p> <p>Cool fire exposed containers with water spray from a protected location.</p> <p>If safe to do so, remove containers from path of fire.</p> <p>Equipment should be thoroughly decontaminated after use.</p> <p>Slight hazard when exposed to heat, flame, and oxidisers.</p>
<b>Hazchem Emergency Action Code (EAC):</b>	Not applicable.

**SECTION 8: EXPOSURE CONTROLS & PERSONAL PROTECTION**

**EXPOSURE CONTROL MEASURES**

No data available.

**ABIOLOGICAL MONITORING**

No data available.

**CONTROL BANDING**

No data available.

**ENGINEERING CONTROLS**

Articles or manufactured items, in their original condition, generally don't require engineering controls during handling or in normal use.

Exceptions may arise following extensive use and subsequent wear, during recycling or disposal operations where substances, found in the article, may be released to the environment.

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

TILLEY SOAPS AUSTRALIA  
SAFETY DATA SHEET  
EXIT TRUST – EXIT Soap

The basic types of engineering controls are:

Process controls which involve changing the way a job activity or process is done to reduce the risk.

Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.

Employers may need to use multiple types of controls to prevent employee overexposure.

General exhaust is adequate under normal operating conditions.

**INDIVIDUAL CONTROL MEASURES, EG: PERSONAL PROTECTIVE EQUIPMENT (PPE)**

**Eye & Face Protection:**

No special equipment required due to the physical form of the product.

Safety glasses with side shields. Chemical goggles.

Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants.

A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience.

Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly.

**Skin Protection:**

No special equipment required due to the physical form of the product.

**Respiratory Protection:**

Respiratory protection not normally required due to the physical form of the product.

**Other protection:**

Not required.
