### N1000 / N1001 Graphs relating to "axial", "beam" and "deflection" loads

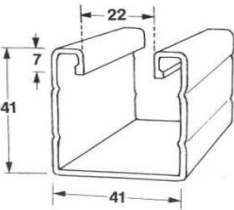

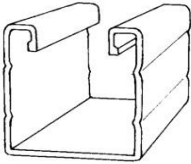

- (i) To assess maximum distributed beam load at allowable stress, determine from Graph "A".  
(ii) For maximum axial load, determine from Graph "B".  
(iii) At the maximum allowable stress, the deflection in the beam is illustrated in Graph "C".  
(iv) All calculations determined from the graphs, and the Nova Strut nuts and set screws monimated for use with the channel, will provide a built-in safety allowance of 3.

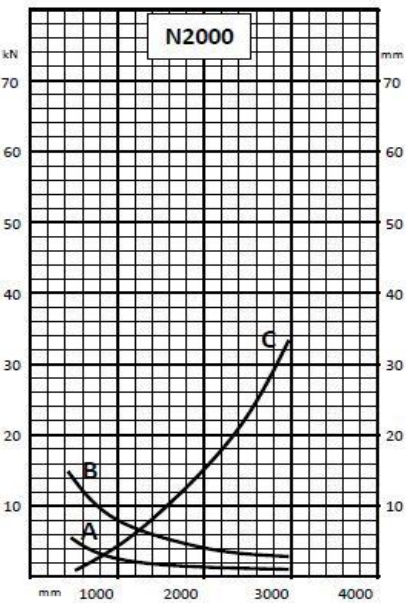

NOTE "A": The millimetre scale at the base of these graphs represents:  
(i) The distance between the beam supports  
(ii) The axial length of a strut of column

NOTE "B": Load which can be applied to Nova Strut nuts:  
(i) To slip = 675kgf per bolt  
(ii) To pull out = 900kgf per bolt
