# Solve Shared Device Management

## The Pain Points (Sound Familiar?)

- 1 Missing devices**  
Theft and misplacement reduce productivity.
- 2 Queue chaos**  
Queues form when staff collect and return devices.

## We Have The Solution

Podloc securely **locks, charges, and tracks shared mobile devices.**

Modular hardware and smart software provide secure access, real-time visibility, and fast deployment.

### Reduce Device Loss

On average, most organisations lose 15% of shared devices annually due to misplacement, theft, and poor tracking.

Podloc's virtual locker, Vlocr, software assigns devices to users with:

- secure logins
- time stamps
- location tracking

**Device loss reduced to 1% or below.**

\*based on customer findings

### End Queue Bottlenecks

Podloc enables fast take-and-go device access with individual login points, removing shift change queues.

Managers gain real-time visibility of:

- device availability
- charge status
- usage history

Result:

- faster shift handovers
- no searching for working devices

## Option 1. Hardware and software

Podloc units are operated using our virtual locker software. This provides the most comprehensive device management solution to **lock, charge, and track shared mobile devices.**

## Option 2. Software-only

Certain devices like bricks-on-sticks do not fit in Podloc. Do not despair, you can still reap the **tracking** benefits of our software. Software is compatible with all Android devices.

# Podloc Hardware: Lock And Charge Devices

| Features                         | Benefits                                                                                                                                                            |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ✔ <b>Fits most devices</b>       | Compatible with most PDA devices. Interchangeable liners let you switch devices without replacing the entire Podloc unit. You're no longer tied to one manufacturer |
| ✔ <b>Charge devices</b>          | One device per pod with customisable profiles: set up charging limits/ smart charging                                                                               |
| ✔ <b>Lock devices</b>            | Keep all devices secure. Combined with our software, uses unique staff logins for access                                                                            |
| ✔ <b>Modular</b>                 | Any place, any number of podloc units (1-1000s), easy relocation                                                                                                    |
| ✔ <b>Zero configuration</b>      | No Ethernet cable or Wi-Fi configuration. Set up power and you're good to go!                                                                                       |
| ✔ <b>Simple installation</b>     | No qualified technicians needed or extensive manpower                                                                                                               |
| ✔ <b>Staff love using Podloc</b> | Quick adoption, well-received                                                                                                                                       |
| ✔ <b>Rugged, one moving part</b> | Durable, built to last 10+ years                                                                                                                                    |
| ✔ <b>Sustainable</b>             | Deliberately made from recyclable materials                                                                                                                         |

# Virtual Locker Software: Track Your Devices

| Features                                    | Benefits                                                                                             |
|---------------------------------------------|------------------------------------------------------------------------------------------------------|
| ✓ Track your mobile devices and accessories | Locate missing devices fast                                                                          |
| ✓ Assign/ accountability                    | Managers know who had the device last and when                                                       |
| ✓ Report                                    | Summarise information of device whereabouts in daily, weekly, or monthly reports                     |
| ✓ Alert                                     | Immediate notice of missing devices by <b>text or email</b>                                          |
| ✓ Compatibility                             | Android 7.1 and above, all MDMs, support OAuth and SSO                                               |
| ✓ Online/ offline                           | Wi-Fi and power outages <b>do not</b> affect Vlocr!                                                  |
| ✓ Simple to use                             | Clients see this as the most powerful and simplistic solution out there                              |
| ✓ Multi-shift compatible                    | Input data for different shifts and expected device return times                                     |
| ✓ Geofencing                                | Keeps the user logged in and linked to the device until returned to home                             |
| ✓ Highly configurable                       | Multi-location? No problem. Changing shift patterns? No problem. Mixed estate of devices? No problem |
| ✓ Cloud-based                               | Access anywhere                                                                                      |

# Removable Liners

## Changing devices shouldn't mean replacing your entire charging solution.

Podloc's removable liners make it easy to adapt your charging infrastructure as your device fleet changes. Simply swap out the liner to accommodate new devices while keeping your existing Podloc hardware in place.

### Flexible Swap-In, Swap-Out

Compatible for different device fleets. Freedom from vendor lock-in and single-device ecosystems.

### Quick and Easy Install

Change the liners in minutes. No specialist training required.

### Future-Proofed Charging Solutions

A cost-effective approach to device upgrades, extending the lifecycle of hardware to last 10+ years.
