

EzyReno

Turf Renovation Fertiliser and Soil Amendment

6 - 2.5 - 3.7

BENEFITS

- Increases CEC levels in sands & soil profiles.
- Contains granular Humic Acid, and organic catalysts which increases soil microbial activity.
- Enhances seed germination plus root formation.
- Contains an unique Methylene Urea and extended release potassium (Expo) combination.
- Contains standard release fertiliser for rapid renovation recovery.
- Contains slow release fertiliser for sustained renovation recovery.
- Contains mini prilled gypsum to improve soil structure.
- Contains granulated Soil Wetting Agent for increased water penetration & plant recovery.

GENERAL FEATURES

A blended mini prilled formulation for renovation of grass and fine turf areas. EzyReno has been designed to increase both CEC levels and soil structure. It promotes both rapid recovery and sustained growth, while increasing microbial activity. The extended release potassium will help to increase the plant tolerance to stresses. The granular soil wetting agent will ensure rapid penetration of applied water.

USED FOR

All renovations and construction.

GUARANTEED ANALYSIS

Nitrogen (N)	6.35%
2.55% Urea	
2.27% Ammoniacal	
1.53% SRN	
Phosphate (P)	2.5%
Potassium (K)	3.7%

MIXTURE OF

Renoboost	50.0%
Slow Release / Starter Fertiliser	35.0%
Soil Wetting Agent	10.0%
Gypsum	5.0%
Pack Size	25Kg

APPLICATION RATE

Grams / M	Kg / hectare	Kg of Renoboost per hectare	M covered per Bag	Bags per Hectare
25	250	125kg	1000	10
40	400	200kg	625	16

A blended mini-prilled formulation for renovation of grass and fine turf areas.
