

Proscape MESA

25-0-4.2 + 1%Fe

BENEFITS

MESA offers a combination of Ammonium Sulphate and Meth-EX 40 nitrogen in a single non-burning granule making it safe to use on all turfgrass situations.

A cost effective alternative to SCU based fertilisers producing superior results.

Nitrogen, sulphur and iron combine for fast green up and exceptional dark green colour for 8+ weeks.

Uniform, well blended granules for easy and accurate spreading.

Excellent for all turf situations where fast up and consistently long term feeding are desired.

The ammonium sulphate supplies ammoniacal nitrogen that is immediately available to the plant for fast response.

FEATURES

ProScape 25-0-4.2 with 51% MESA is a popular analysis for both warm and cool season turf. MESA is an innovative new nitrogen source that combines the benefits of methylene urea with ammonium sulphate in a single granule. Meth-EX brand methylene urea complex relies on microbial activity to provide consistent extended feeding. Our exclusive process also utilizes methylene urea to slow down the release of ammonium sulphate for longer feeding. In addition, ammonium sulphate supplies plant available sulphur. The sulphur, iron, and nitrogen combine to maximize colour. The result is a fertiliser that gives turf

a brilliant rich green colour, fast response, and extended feeding, all without excessive growth.

USES

Standard granule size of 210 (2.1mm) suitable for fairways, sports fields and other similar turf situations. Excellent for all turf types where fast green up and consistent long term feeding are desired. This non-burning source of ammonium sulphate is perfect for soils that benefit from acidification and readily available sulphur.

GUARANTEED ANALYSIS

Nitrogen (N)	25.0%
5.3% Ammoniacal N 2.1% Water Insoluble N	
12.7% Urea N 4.9% Other Water Soluble N*	
Soluble Potash (K)	4.2%
Total Sulphur (S)	5.1%
5.1% Combined Sulphur	
Total Iron (Fe)	1.0%
