DESCRIPTION

The combination of Kevlar® and a natural rubber coating on the palm is ideal for countering the risk of cuts. It ensures excellent resistance to tearing, puncturing and abrasion while remaining highly flexible. Showa's original design provides minimum joint fatigue. The back of the hand is ventilated to limit perspiration. The seamless liner and anatomical shape allow both wet and dry parts to be handled with dexterity. They also reduce hand fatigue and prevent irritation. The elasticated cuff keeps the glove correctly adjusted. Can be washed at 40°C using a neutral detergent*.

*Performance cannot be guaranteed after washing. Indeed, it is the user's responsibility to eliminate products from the circuit if they show considerable wear, as this may compromise the product's performance. Users must note that these gloves offer very high traction resistance
