

Installation Guidelines for the Weather Protected Prox Rex (Touch to Exit)

The Weather Protected Prox Rex has the same installation requirements as the standard Prox Rex.

The additional weather protection features consist of a protective coating applied to the PCB, all apertures sealed and an EVA gasket fitted. This offers the ultimate protection against water and dust ingress in harsh environments.

Installation notes

The Prox Rex-WP must be mounted on a flat, non-porous surface to achieve an IP55 rating.

Care should be taken when selecting or preparing the surface upon which the Prox Rex-WP is to be mounted to ensure that water and dust cannot bypass the perimeter gasket.

When installing onto one of our surface mount accessories, make sure that the surface mount is also weather protected against the egress of water and dust.

If mounting the plate using the corner mounting holes, ensure the plate is kept flat on the fixing surface.
