double foot pedal

UP/DOWN switch

Introducing SuperSpeed from Lamidesk, the latest revolution from the company that invented the motorised flatbed applicator. SuperSpeed is not only motorised, but CNC controlled! It features programmable pre-set positions and a proportional-speed foot pedal. Now Lamidesk allows you to work even more efficiently!

- 1 - Start position of mounted sheet
- 2 - Best position for removing liner and vinyl preparation
- 3 - End of the sheet or park position for easy material replacement

- UP/DOWN buttons
- Proportional foot pedal

Don't work hard, Work Smart...

Motorised drive system, proportional foot switch and 6 up/down buttons for moving the roller, allow you to completely change the way you use a flatbed applicator. Using traditional tables, the operator works up and down the long edge of the table. With Lamidesk, we have designed everything to happen at the end of the table. This work area is easily accessible for the operator and allows for mounting that is much quicker and easier than manual models.

Proportional Foot Pedal

With the double foot switch you can control the forwards/backwards movement of the roller from either end and the operator can stay at the part of machine that suits his/her preferred method of work.

- Three foot buttons used for setting and moving to pre-set positions.
- Proportional foot pedal lets you adjust speed just like a car accelerator
- Milled and anodised aluminium; durable body and parts
- Stainless construction parts and brushed stainless steel cover
- HALL sensors inside for lifetime durability

SuperSpeed LED Set (Option)

The backlight set can be added to any SuperSpeed machine at any time, by the user and in only a few minutes - no tools needed. All aluminium plates and power box include magnetic holders for easy click-in/click-out mounting and disassembly. An incredible 680 watts of LED power adds another dimension to your work. Takes the stress out of the alignment process! Set includes: LED plates (quantity depends on machine size, all connection wiring, power supply unit).

Table height adjustment

Working height of the table can be adjusted from 850-1005 mm. You choose the table height that is right for you. This feature is included as standard equipment on each machine.

Manual Mode

With the motor-driven Lamidesk SuperSpeed there may be the occasional application where you prefer to run the machine in manual mode. Simply press a button and the motor is disengaged!

Material holder TOP/END

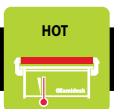

With the roll holder, you can load your material very easily and quickly. It is not necessary to load the material on to the bar and secure it, you just have to lay it on top between the roller and the bar, pulling it around the roller, which is then lowered prior to lamination.

The end holder can help hold materials if you are preparing them before lamination. This feature is included as standard equipment on each machine.

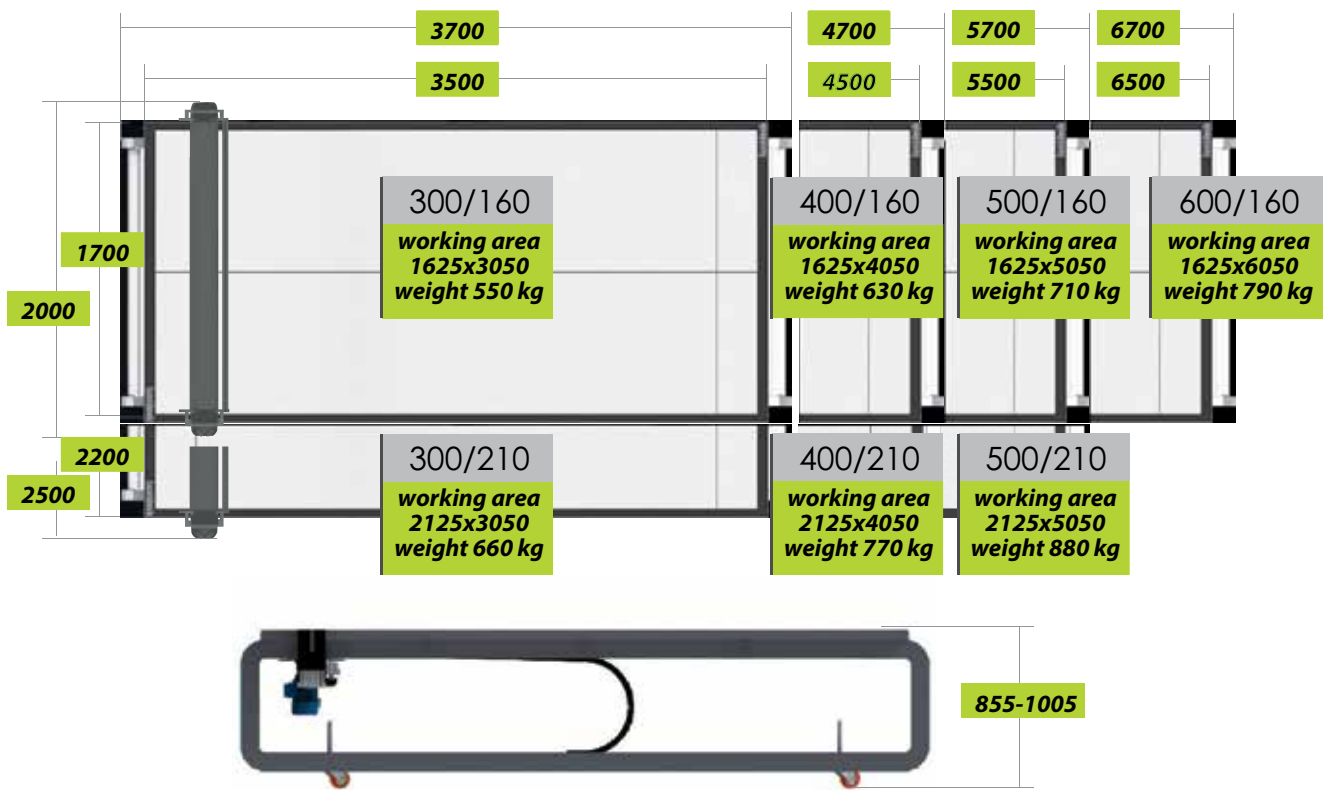

Heated Roller (Factory Option) up to 60°C

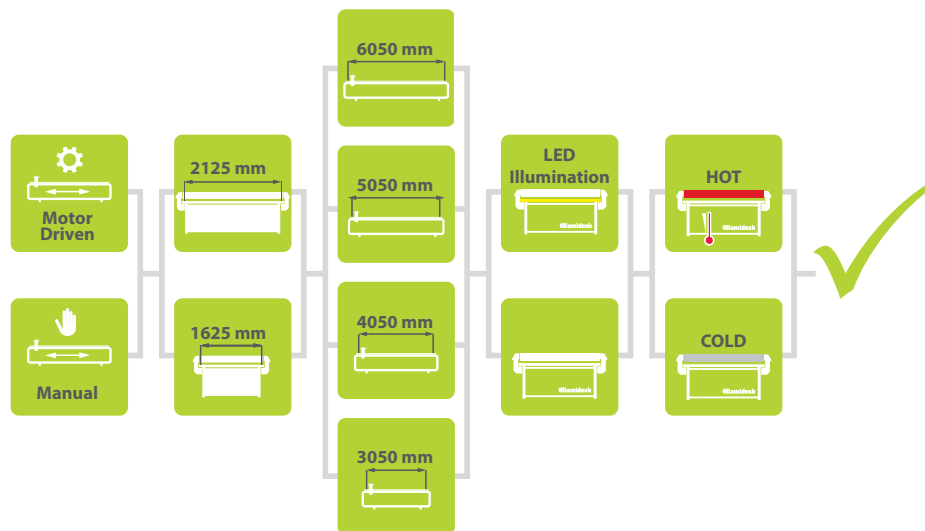

Heated rollers have been available in roll laminators for many years. They provide the advantage of avoiding "silvering".

If you are mounting prints behind glass or plexiglass you may consider a heated roller because the glue needs to be absolutely transparent. The heated roller may provide a superior result.
