SAFE EASY TO USE CONCRETE REMOVER

BEFORE

AFTER

PRODUCT OVERVIEW

Crete-Wash is a unique and safe formulation designed to remove dry set concrete without damaging the surface underneath. It is perfect to use in removal of accidental splashes of concrete on painted surfaces, aluminum window frames, vehicles or tools with rubber and other sensitive parts other harsh acid systems would attack, stain and damage. It will not acid etch or stain.

For around the house, it is a fantastic concrete path/driveway cleaner. It can be diluted with water and used on wetted concrete to clean inground dirt, tire marks and browning of concrete to bring it back to newly laid concrete color without harsh stripping of the surface. This is a biodegradable and safe product to use.

AFTER

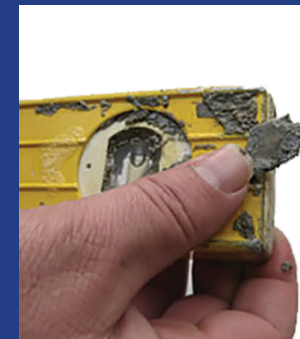

CRETE-WASH IN 3 EASY STEPS

Spray Crete-Wash onto the dry set concrete, allow to soak for at least 15 minutes. If it starts to dry reapply or spray a mist of water over the required area to keep the concrete moist.

1 SPRAY

While soaking, agitation of the concrete will aid in the softening of the concrete into a mud-like consistency. Scrape the concrete residue to remove it off the surface. For thicker build ups, multiple applications may be needed.

2 SCRAPE

High pressure water and a stiff bristle brush will help remove stubborn areas. Rinse thoroughly to remove any residue. Allow to dry. Scrub the surface and it's as good as new!

3 SCRUB
