

**SPECTUR**  
SENSE. THINK. ACT.

# Metal Base Installation Option

Explore the new versatile Spectur portable base option featuring a winch operated tilt pole on a stable platform that can be used (with constraints) in all Australian wind zones.

## Features

Securely mount and power cameras, sensors, and communication equipment on a rugged, portable base.

Leverage “smart cities” solutions.

Link your remote sensors.

Solve an expanding range of challenges.

Self-contained in a robust structure.

Quick installation on any surface.

Single-person installation with no part weighing more than 25kg.

Moveable by forklift (assembled).

Designed and engineered to withstand some of Australia’s most extreme weather conditions.

## METAL BASE

# Unmatched Flexibility and Stability

The V2 Metal Mobile Base enables quick installation and relocation on any surface – whether hard or earthen – with no requirement for ground disruption.

Our solution is designed to comply with appropriate Australian Standards and can be assembled by a single person without cranes, trucks or traffic management. When assembled, the base can effortlessly be relocated using a forklift or alternatively disassembled and relocated by a single individual.

In standard configuration, the V2 Metal Mobile Base suits a 100mm x 100mm pole.

## Specifications

### Application

Road works, security and surveillance, emergencies, construction site, outdoor events, mining, resources, and heavy industry, and installations on hardstanding or areas where excavations are not permitted.

### Weight

Fully assembled from 560kg (can be more pending wind zone and application).

### Size

1.2m width with 4m height (with standard pole).

### Wind Rating

Up to 800N of horizontal load capacity at the top of a 4m pole. Higher wind or horizontal loads can be supported with reduced mast height.

### Transport

Moveable by forklift when assembled or by a single person without lifting equipment (with disassembly).

### Material

Hot Tip Galvanised for long life.
