Illuminated side header and / or side panel
This option is only available on the 7100 and 7300 series.

Superstructure

Mercy ticket dispenser

Coin comparator

Bill acceptor

Swipe card reader
(not supplied by Elaut)

E-Claw 600 2 pl.

The "E-Claw" is fully equipped with environment-friendly LED lighting. White LEDs are used inside, while the outside is equipped with RGB LEDs with 300,000 shades of colour.

You can change the colour of the crane whenever you like, or if you prefer an automatic change of colour, this also is possible.

If cranes are linked, they can use the same colour pattern. The modern look of this crane was obtained by the LED combined with the white-lacquered aluminium profiles. The gantry is the very first and only one of its type that

has intelligence and self-learning capacity.

So it knows at all times precisely where it is and corrects itself as and where necessary. The gantry is easy removable, low maintenance and without micro-switches. Operating cranes optimally and successfully has never been so easy.

The front consists of high-grade vandal-resistant plastic. It also conceals an enormous drawer with a locked cash box, all the electronics and extra stock room.

Cosmic

The Cosmic completes the E-Claw family and is specially designed for larger toys. The prize hole and playfield are bigger for large items such as footballs and size 5 soft toys which are not a problem for the stronger and larger claw. The playfield is lower, but the height of the control panel and total height are the same as the 600 and 900 series.
